W. & J. FREEMAN, Merchants in the various descriptions of STONE, GRANITE, and SLATE, for Engineering and Building Purposes. Supplies direct from the Quarries, by vessel or railway. Direct communication with the principal ports for EXPORTATION. Wharf prices and estimates for special contracts, including quarry work or other labour, forwarded on application.—Office, 27, Millbank street, London, S.W.

LITTLE CASTERTON FREESTONE.
Apply, for prices, &c. to
OCTAVIUS N. SIMPSON, STAMFORD;
and see Specimens at the Office of
Messrs. PINDER SIMPSON & SONS, 29, Saville-row, London, and at the Museum of Practical Geology, Jermyn-street, W.
This stone (which is a perfect oolite) is raised in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water works and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is brought at a cheaper rate than any stone in the kingdom.
*** The above WEATHER STONE is 1s. 9d. per cubic foot, delivered in London.

G. MITCHELL, MARBLE, STONE, and GRANITE WORKS.
SHOWROOMS:—
No. 148, BROMPTON ROAD, LONDON, S.W.; where Architects, Builders, and Merchants will find the largest and best Stock of CHIMNEYPIECES and MONUMENTS in London; of which Books, Catalogues, and Sheets of Monuments will be forwarded on application.
Estimates will meet with prompt attention.

3s. 9d.

INTERNATIONAL EXHIBITION, 1862.

CLASS 35, NO. 6849.

The only Medal "for Stone Ware" has been awarded to

DOULTON & WATTS, LAMBETH POTTERY,

LONDON.

In expectation of a greatly increased sale, D. & W. have determined to introduce the annexed pattern of their ENAMELLED STONEWARE CLOSET-PANS, at the price of the commonest description of earthenware.

Experience has shown that this shape is the most simple and efficient, and that in strength, durability, and cleanliness it cannot be surpassed by the most expensive closets.

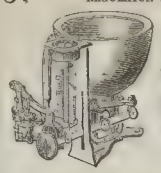
FIGURE D STONEWARE CLOSET PAN AND TRAP, 3s. 9d. COMPLETE.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its Lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non conductor.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.



CROGGON and CO.'S PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c. and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c. preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to

CROGGON and CO. 2, DOWGATE-HILL, London; and 2, GOREE PIAZZA, Liverpool.

J. TYLOR & SONS' PATENT REGULATOR WATER-CLOSETS.

Valve.

Pan.

The Regulator Valve gives perfect control over the supply of water to each closet, so that, however small the fall of water, perfect flushing is insured. Any number can be worked by one supply pipe. No intern-valves, cranks, or wires required. The Closets can be seen in action at the Manufactory, and Illustrated Catalogues had on application to the Manufacturers, J. TYLOR & SONS, Warwick-lane, Newgate-street, London.

TERRA COTTA and Fine STONEWARE POTTERY, warranted to stand Frost.

JOHN M. BLASHFIELD, STAMFORD POTTERY, STAMFORD, LINCOLNSHIRE, has greatly improved and commenced the manufacture of TERRA COTTA and FINE STONEWARE for ARCHITECTURAL PURPOSES. He is able to make it of various new colours, so as to harmonize with Marble, Portland, and other Stones, and equal in hardness to Granite.

A Medal at the International Exhibition was awarded, in Class 10, Section C, Architectural Objects, for "Perfection in manufacture and beauty of form." A Medal was also awarded for "Terra Cotta."

Moulded Bricks, String Courses, Copings, Cills, Tracery, Balusters, Capitals, Crosses, Terminals, Vases, Statues, Brackets, Corners, Garden Edging, Guttering, Sanitaire, and two-inch Paving Tiles, &c. &c.

Also Plain and Mosaic Pavements for Halls, Churches, Conservatories, &c. in all colours.

London Office, 377, Oxford-street, W.

MINTON, HOLLINS, & CO. Stoke-upon-Trent, beg to inform Architects, the gentry, and others, that in consequence of the increasing demand for their Encaustic and Mosaic Pavements, and with the view of facilitating the execution of orders, they have opened an additional Show Room, at their Establishment, No. 50, Conduit-street, London, where experienced draughtsmen will be constantly in attendance, to afford all information required.

DRAWINGS and ESTIMATES, on the receipt of plans, will also be promptly furnished, on application at the Manufactory, Stoke-upon-Trent.

MINTON & CO. take the present opportunity of stating that they have always in stock a large and varied assortment of tiles, suitable for flower boxes, stoves, and other ornamental purposes.

PRIZE MEDAL TO MAW & CO. INTERNATIONAL EXHIBITION 1862.

IMPERISHABLE TESSELATED PAVEMENTS, combining a highly decorative and economical substitute for ordinary floors of their perishable coverings. MAW & CO.'S Pattern book, designed by M. Digby Wyatt, esq. together with a special design and estimate of cost adapted to any given dimensions of hall, passage, conservatory, verandah, frieze, &c. will be sent on application to Benthall Works, Broseley, Salop.

May be seen at the Exhibition of Building Inventions, &c. now open at the Galleries of the Architectural Exhibition, 9, Conduit-street, free.

London Agents—W. B. SIMPSON & SONS, 456, West Strand, who have on view a great variety of Specimens of the Pavements.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c. Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21 Wharf, Macclesfield-street North, City road, Boston, N. 2ndly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and 3rdly, that the "Reports of the Jurors," page 581, of the Great Exhibition, 1851, note the grant of a First-class Medal and rank the Manufactories known so long as "The Tilaries," Tunstall, Staffordshire, as the first of the kind in the world.

TWO PRIZE MEDALS AT THE INTERNATIONAL EXHIBITION

MAGNUS'S ENAMELLED SLATE obtained the Medal of the Society of Arts; the Prize Medal at the Great Exhibition, 1851; Two First-class Medals at the Paris Exhibition; and Two Prize Medals at the International Exhibition of 1862.

Truly imitations of this beautiful material are being palmed upon the public. Architects are therefore requested to see that the name of "MAGNUS" is upon each article.

Chimney-pieces, Billiard-tables, Table-tops, Baths, Wall-linings, &c. a New Illustrated Catalogue of which can be had at the Pimlico Slate Works, 59 and 60, Upper Belgrave-place, Pimlico, S.W.

SHOW ROOMS, 20, New Bond-street W.

GUTTA-PERCHA MILL-BANDS.—The Gutta Percha Company beg to state that the increasing demand for the Gutta-Percha Strapping for Driving-bands, Lathestraps, &c. fully justifies the strong recommendations they have everywhere received. Their durability and strength, permanent contractibility and uniformity of substance; their non-susceptibility of injury from contact with oils, grease, acids, alkalies, or water; and the facility with which the only joint required can be made in bands of from 200 to 300 feet long, render them superior to leather for almost all working purposes, and decidedly more economical. Every variety of Gutta-Percha Articles, such as Tubing, Soles, Pump-buckets, Fire-buckets, Boxes, Union Joints, Flasks, Bottles, Bowls, Toilet-trays, Curtain-rings, Galvanic Batteries, Talbotype Trays, &c. &c. manufactured by the Gutta Percha Company, and sold by their Wholesale Dealers in town and country.

THE GUTTA-PERCHA COMPANY, PATENTEES, 18, WHARF ROAD, CITY ROAD, LONDON.

THE ESTATE of JOHN PRICE, Esq., deceased.—The Merton Abbey Lodge Property, an exceedingly valuable Freehold Estate, available for building, surrounded by good Roads, and in close Proximity to certain important Railway Works.

MESSRS. EDWIN FOX and BOUSFIELD will SELL by AUCTION, at the MART, opposite the Bank of England, on WEDNESDAY, FEB. 24, at TWELVE for ONE, in Lots, an important and valuable FREEHOLD ESTATE, distinguished as Merton Abbey Lodge, most advantageously situate in High street, Merton, Surrey, about one mile from the Wimbledon Station on the South Western Railway, and half a mile from the Merton Station on the Wimbledon and Croydon line, consisting of a spacious and very substantial mansion-house, standing at an agreeable remove from the road, approached by a carriage sweep, with lodge at entrance. It is surrounded by about 33 acres of land in pleasure and kitchen gardens, orchards and meadows; there are first-rate stabling and coach houses, and all necessary detached offices, within an enclosed yard. Also, adjoining the King's Head publichouse, in the main road, three cottages, farrier's shop, yards, &c. The whole is leased for a term expiring at Midsummer next, when possession can be had. The estate possesses a commanding frontage of about 1,100 feet to the high road from London to Epsom, and a frontage of 770 feet to an important leading road at right angles thereto, and is well adapted for opening up other roads between the two, thus creating many thousand additional feet of available building frontage.—Particulars may be obtained of HENRY WANEY, Esq., Solicitor, 30, Moorgate-street; and of Messrs. EDWIN FOX & BOUSFIELD, 41, Coleman-street, Bank.

Preliminary Advertisement.—To RAILWAY CONTRACTORS and OTHERS.—Bristol and South Wales Union Railway.

MESSRS. BARNARD, THOMAS & CO. have been favoured with instructions from Mr. R. Brateel (the Contractor) to SELL by AUCTION, a large quantity of RAILWAY PLANT and MATERIALS, at or near the Patchway, Filton, and Portskewet Stations on the above Railway, to commence on TUESDAY, FEBRUARY 16th, 1864; consisting of Three Narrow-gauge Light Contractors' Engines; a number of Narrow-gauge Earth Waggons; Contractors' Tanks; and other Plant and Materials; further particulars of which will be given in future Advertisements, and 10 Catalogues to be issued by February 12th.

Four Days' Sale of Timber, on WEDNESDAY, FEBRUARY 3rd, at ELEVEN for TWELVE o'clock precisely, and Three following Wednesdays.

THOMAS ROBERTS & CO. have received instructions to DISPOSE OF by PUBLIC AUCTION on the above days, the LARGE and WELL-SEASONED STOCK of Messrs. Robert Ward & Son, on the PREMISES, 101, Bermondsey-wall, near the Bricklayers' Arms. President—A. J. B. BERESFORD HOPE, Esq. M.A. D.C.L. &c. &c.

NOTICE.—The ANNUAL EXAMINATION in Drawing, before the Government Inspector, takes place in MARCH. Persons not taught in the School may present themselves for Examination without any Fee, and are equally eligible with the Students to receive the Certificates and Prizes granted by the Government. Special EXAMINATION CLASSES are formed in the School for qualifying in the several subjects of examination. Former Students will be provided for in these classes; and as long as there is room, strangers may join them.

30th January, 1864.

NOTICE.

BROWN & GREEN'S KITCHEN RANGE WAREHOUSE is now REMOVED to the NEW PREMISES, 73—74, Bishopsgate-street Within, a few doors from the late Address, at No. 81. These afford accommodation for a still larger stock of their Patent Prize Medal Ranges and Stoves, Register Grates, and Cooking Utensils, to meet the great public demand; and also for the consequent more extensive execution, by the manufacturers themselves, of all descriptions of hot water, bath, laundry, and steam work.

73—74, Bishopsgate-street Within, November, 1863.

BILLING'S PATENTS.—CHIMNEY TERMINALS.—THROAT VALVES.—NOTICE to ARCHITECTS.—The Proprietors of these PATENTS have given the Widow an Interest in the same, and have considerably reduced the price of the Articles, trusting that by so doing these useful Inventions may be introduced more generally in all new buildings.—For prices, apply to the Manager, Mr. TYLER, 12, Abingdon-street, Westminster, who will also afford any information, he having been for many years engaged with the late Mr. BILLING, in the practical curing of Smoky Chimneys.

COMPETITIONS.

TO ARCHITECTS.—VILLA and COTTAGE RESIDENCES.—The Directors of the Manchester Villa and Cottage Association, Limited, offer 50l. PREMIUM for the BEST DESIGN, and 25l. for the Second best Design, for FOUR COTTAGES and SIX DWELLING-HOUSES.

First a Row of Four Cottages, not to exceed 100l. each in cost.

Secondly, a Group of Two Houses, not to exceed 200l. each in cost.

Thirdly, a Group of Two Houses, not to exceed 300l. each in cost.

Fourthly, a Group of Two Houses, not to exceed 200l. each in cost. The plans and drawings, at a scale of five to fifteen feet to the inch, figured dimensions, to be sufficient to show the respective designs, and to be accompanied with a general description of the materials and finish. Plans of proposed sites for the groups may be had from the Secretary. Buildings undertaken by the Association may be built under the superintendence of any architect nominated by the person or persons who covenant to purchase them when built. Messrs. COLBERT & RABY, the Architects and Surveyors to the Association, will not compete for the above, but will assist the Directors in adjudicating the premiums. The designs to be sent in to the Secretary, sealed and endorsed "Designs for Villa and Cottage Residences," on or before the 20th of APRIL next, marked with a motto, and with sealed envelope containing Architect's address, or signed with name instead of motto, if preferred. Designs not adjudged to receive the premium to be returned.

JOHN WORTHY WILLIAMS, Secretary.

Offices, 26, Market-street, Manchester, January 15, 1864.

TO ENGINEERS, MACHINISTS, &c.—The Sociedad de Messageries à Vapor, Buenos Ayres, is prepared to offer a PREMIUM of 100l. for the best approved system of TRACTION ENGINE, suitable for passenger traffic in a country void of metaled roads. The requirements of such an engine would be to convey a load of ten tons ten miles per hour; construction to combine simplicity, strength, and economy in fuel.—Plans and proposals to be forwarded to the Managers of the Society, care of ROBERT KING, Esq. C.E. 25, Poultry, E.C.

ASHFORD, KENT.—PROPOSED NEW CHURCH near the RAILWAY WORKS.—The Committee are desirous of receiving DESIGNS for a NEW CHURCH, capable of holding not less than 600 persons. The outside walls to be of Kentish rag, tiled roof, open sittings of stained deal. The Architect is to state the sum for which the work may be completed; and must be prepared, if required, to find a builder willing to undertake it for such sum. 20l. will be paid for the selected design. Plans and specifications to be sent, under cover, to the Committee, at the College, Ashford, on or before the 1st of MARCH next.

JOHN PRICE ALCOCK, Chairman.

Ashford, January 29th, 1864.

TO ARCHITECTS and LANDSCAPE GARDENERS.

Prizes—100l. 50l. and 25l.

The Directors of the Alexandra Park Company, Limited, offer 100l. for the best DESIGN for LAYING OUT about 250 ACRES of BUILDING GROUND, including DESIGNS for a MODEL VILLAGE adjoining the Park; 50l. for the second best, and 25l. for the third best design.

Plans of the Estate, and all particulars, may be obtained at the Offices of the Company.

The designs must be sent in to the Secretary on or before the 29th day of FEBRUARY next; and the Prizes will be awarded and paid on the 15th day of MARCH following.—By order of the Board,

F. K. PARKINSON, Secretary.

12, Tokenhouse yard, London, E.C. January 23th, 1864.

NEW WATERWORKS at RIPON.—To ENGINEERS and OTHERS.—The Council of the City and Borough of Ripon, acting as the Local Board under the Local Government Acts, having determined upon providing their District with a supply of pure and wholesome water, constantly laid on at such pressure as will carry the same to the top story of the highest dwelling-house within such district, hereby offer a PREMIUM of FIFTY GUINEAS for the best and most practicable SCHEME for obtaining such a supply. Full particulars of the plan proposed, with all necessary specifications and estimates of the cost of carrying out and working the same, are to be left, in sealed covers, pre-paid, and marked on the outside, "Waterworks' Plan," at my Offices, in Ripon, on or before the 8th day of MARCH next, where, meantime, further information may be obtained. The Council are not to be liable to make any recompense or other payment to unsuccessful competitors; nor do they pledge themselves to employ the person whose plans may be preferred, but, if not employed, the above-named premium will be given, and such plans, specifications, and estimates will remain the property of the Council.—By order,

R. W. NICHOLSON, Town Clerk.

Ripon, January 20, 1864.

CONTRACTS.

TO BUILDERS.—Such Persons as may be desirous of UNDERTAKING the several WORKS and REPAIRS that may be required by the War Department to the BARRACKS at Chichester, from the 10th MARCH, 1864, to the 31st MARCH, 1865, may be furnished, by payment of seven shillings and sixpence, with the printed Schedules of Prices and Conditions of the Contract on personal application at this Office, between the hours of TEN and FOUR daily (Sundays excepted), up to the 14th FEBRUARY next.

The Tenders to be delivered before TWELVE o'clock at noon on SATURDAY, the 13th day of FEBRUARY, 1864, at the War Office, Pall Mall, London, addressed to the Director of Contracts, and endorsed "Tender for Artificers' Work, Chichester."

The Secretary of State for War reserves to himself the right of rejecting the whole or any of the Tenders.

J. W. GORDON, Colonel,
Commanding Royal Engineer.

Royal Engineer Office, Portsmouth, 17th Jan. 1864.

POULTON, BARE, and TORRISHOLME LOCAL BOARD of HEALTH.—MORECAMBE WATER SUPPLY.—To IRONFOUNDERS and OTHERS.—The Local Board of Health for the district of Poulton, Bare, and Torrisholme, in the County of Lancaster, do hereby give notice, that they are prepared to receive TENDERS from all parties willing to SUPPLY CAST IRON PIPES and other CASTINGS required for the Proposed WATER SUPPLY of Morecambe, within the said district.—Drawings may be seen, and copies of the specification, with duplicate forms of Tender, bills of quantities, and schedules for prices, may be obtained (on payment of one pound) on application at the Office of C. T. CLARK, Esq. Solicitor, Lancaster (Chairman of the Local Board); or at the Office of JOHN LAWSON, Civil Engineer, 34, Parliament street, Westminster. Sealed Tenders, endorsed "Tender for Cast-iron Pipes," must be forwarded to the Chairman of the Local Board, on or before MONDAY, the 29th day of FEBRUARY, 1864. The Local Board do not bind themselves to accept the lowest or any Tender.

C. T. CLARK, Chairman of the Local Board.

Morecambe, 12th January, 1864.

METROPOLITAN IMPROVEMENTS.—SOUTHWARK STREET. The Metropolitan Board of Works hereby give notice, that they will meet at their Office, in Spring-gardens, Charing cross, on WEDNESDAY, the 24th day of MARCH, now next, at TWELVE o'clock at Noon precisely, and will be prepared to open TENDERS by parties who may be willing to take on BUILDING LEASES all or any of certain PLOTS of GROUND, situate on the north and south sides of Southwark-street, from High street, Borough, to Blackfriars-road. Particulars, conditions, at Form of Tender, and every information may be obtained of the Superintending Architect's Office, at the Office of the Board, on and after the 1st of FEBRUARY next, between the hours of NINE a.m. and FOUR p.m. The Tenders must be on the printed form supplied at the Office of the Board, and be delivered under sealed covers, endorsed, "Tender for Ground in Southwark-street," and addressed to the Clerk of the Board, at the Office of the Metropolitan Board of Works, Spring-gardens, S.W. before TWELVE o'clock at noon, on the said 24th MARCH next, and no Tender will be received after that hour. The Board do not bind themselves to accept the highest or any Tender.

JOHN POLLARD, Clerk of the Board.

Spring-gardens, Charing cross, 9th January, 1864.

[For remainder of Contracts see next Page.

NOTICE to BUILDERS.—The Commanding Royal Engineer at Sheerness hereby gives notice, that sealed TENDERS will be received at the Office of the Director of Contracts, War Office, Pall-mall, on or before TUESDAY, the 1st day of MARCH 1864, from such persons as may be desirous of CONTRACTING with the Secretary of State for War, for the term of three years, commencing on the 1st day of APRIL, 1864, for the SUPPLY of MATERIALS, and for the performance of such Brick layers', Mason's', Carpenters', Slaters', Plasterers', Plumbers', Smiths', Painters', Paint-rs', Glaziers' Pavers-hangers', and flagsters' Work, as may be required by the Royal Engineer Department at Sheerness, including Chatham Works and Queenborough. The Isle of Grain with the Tower, and Sloven Fort.

Only one contractor will be accepted for the whole of the trades; and the parties tendering must state what sum on each schedule, according to the printed directions thereon, the rate at which they are willing to perform th work, which rates of per centage may be different for each trade, sought to be done or expended.

Printed schedules and every particular relating thereto may be obtained at this Office, between the hours of TEN and FOUR, till the 27th FEBRUARY, instant, after which date none will be issued.

Tenders for the above works to be addressed to the "Director of Contracts, War-office, Pall-mall, London, S W." and endorsed "Tender for Builders' Work, Sheerness, &c." in the left hand corner of the envelope.

No Tender will be attended to which is not filled up strictly in conformity to the instructions, as stated in the printed schedules, nor will any offer be accepted but from such person or persons as may be considered competent to perform the work for which they may tender.

N.B.—The Secretary of State for War reserves to himself the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Sheerness, Feb. 3, 1864.

TO CONTRACTORS. — Notice is hereby given, that the Vestry of the Parish of Saint George-the-Martyr, Southwark, is prepared to receive TENDERS for SCAVENGING and WATERING, for the REMOVAL of DUST, for MASONS' and PAVIORS' WORK, for SUPPLYING GUERNSEY GRANITE, SPALLS, ROCHESTER FLINTS, and YORKSHIRE and DRIVERS with in the said Parish.—Every Tender must be upon a form that may be obtained at the Office of the Vestry Clerk, and must be delivered, under seal, and endorsed "Tender," at the said Office, on or before the 15th day of FEBRUARY, 1864; and the person tendering, or his duly authorised representative, must attend at the Vestry Hall, at 11 o'clock in the forenoon of the TUESDAY next thereafter. The Vestry does not engage to accept the lowest or any Tender.—By order,

DANIEL BIRT, Vestry Clerk.

Vestry Clerk's Office, Vestry Hall, Borough-road, S.E.

THE VESTRY of the PARISH of CHELSEA, in the County of Middlesex CARTAGE and HORSE HIRE. The Vestry of the Parish of Chelsea will meet, at the Board room of the Vestry Hall, King's-road, on TUESDAY, the 16th inst. at THREE o'clock in the afternoon, to consider TENDERS from persons willing to contract from the 1st day of March next to the 1st day of March, 1865, for CARTAGE WORKS, and for DRIVERS and CARTS, at 1 DRIVER as many may be required in any part of the Parish. Parties tendering must appear personally on the day the Tenders are opened, and the Contract, if agreed to, will be upon the printed forms to be obtained here. Sealed Tenders, signed by the proposed Contractor, with the names and descriptions of two sufficient sureties for the performance of his Contract, are to be left at the Office, on or before TWELVE o'clock on TUESDAY, the said 16th inst. The Vestry do not bind themselves to accept any Tender.—By order,

CHARLES LAHEE, Vestry Clerk.

Vestry Hall, King's-road, February, 1864.

THE VESTRY of the PARISH of CHELSEA, in the County of Middlesex.—SCAVENGERING and WATERING RATE.—The Vestry of the Parish will meet in the Board Room, at the Vestry Hall, King's-road, on TUESDAY, the 16th FEBRUARY instant, at THREE o'clock in the afternoon, to receive TENDERS from persons willing to CONTRACT, pursuant to the terms of a Draft Contract now lying for inspection at the Vestry Hall aforesaid, for which may be seen on application to the Vestry Clerk, for SCAVENGING the STREETS and PUBLIC PLACES within the entire District, Kensal New Town, from the 1st of MARCH next* to the 1st day of OCTOBER next; and for the removal of the SLOP from the said Streets, from the 1st day of MARCH next* to the 1st day of MARCH, 1865. The Tenders are to name one amount for both SCAVENGING and WATERING, and are to be upon printed forms, to be had at the Office, on or before the day appointed for the Parties tendering, or their agents, to attend at the Vestry Hall aforesaid, at which time the Tenders are to be opened, and the parties whose Tenders are accepted, and the terms they are to pay for the said Contract. Sealed Tenders signed by the proposed Contractor, with the names and descriptions of two sufficient sureties for the performance of a Contract, are to be left at the Office, on or before TWELVE o'clock on TUESDAY, the said 16th inst. The Vestry do not bind themselves to accept any Tender.—By order,

CHARLES LAHEE, Vestry Clerk.

Vestry Hall, King's-road, February, 1864.

* Note.—The date for commencing to cleanse and water the portion of the Harrow-road from Plough Land to Cumnock Wharf will be JULY 1st.

THE VESTRY of the PARISH of CHELSEA, in the County of Middlesex.—SCAVENGERING and WATERING.—The Vestry of the Parish will meet in the Board Room, at the Vestry Hall, King's-road, on TUESDAY, the 16th FEBRUARY instant, at THREE o'clock in the afternoon, to receive TENDERS from persons willing to CONTRACT, pursuant to the terms of a Draft Contract, now lying for inspection at the Vestry Hall aforesaid, for which may be seen on application to the Vestry Clerk, for WATERING the STREETS comprised in one or other or both of the Districts in the Parish, for the period of Kensal Town from the 1st MARCH* to the 1st day of OCTOBER next, and for the REMOVAL of the SLOP from one or other or both of the Districts, from the 1st of MARCH* next to the 1st day of MARCH, 1865. The Tenders are to name one amount for each District, and are to be upon printed forms, which may be obtained at the Office. Parties tendering must appear personally on the day the Tenders are opened, and the Contract, if agreed to, will be upon the printed forms to be had at the Office. Sealed Tenders, signed by the proposed Contractor, with the names and descriptions of two sufficient sureties for the performance of the Contract, are to be left at the Office, on or before TWELVE o'clock on TUESDAY, the said 16th inst. The Vestry do not bind themselves to accept any Tender. By order,

CHARLES LAHEE, Vestry Clerk.

Vestry Hall, King's-road, February, 1864.

* Note.—The date for commencing to cleanse and water the portion of the Fulham road from Thistle Grove to the Parish Boundary at Stamford Bridge will be JULY 1st

TO IRONFOUNDERS.—TENDERS are required, by the 19th of FEBRUARY, for about 2,000 tons of PIPES, and other CASTINGS, coated, for export. Specification may be obtained, and tenders sent, on application to WM. BIRD & CO. 9, Laurence Pountney-hill, London, E.C

PADDINGTON.—Notice is hereby given, that the Vestry of Paddington are ready to receive TENDERS from parties willing to CONTRACT for the CONSTRUCTION of about 770 feet run of 3 feet 9 inches by 2 feet 6 inches whole BRICK SEWER, in Petersburg mews and adjoining streets.—Plans, sections and other Works tendered for may be seen at the Surveyor's Office, and directed "To the Vestry," and left at the Vestry Hall, Harrow-road, on or before MONDAY, the 15th of FEBRUARY next, previous to noon, by which time are requested to be in attendance on the following morning (TUESDAY) at TEN o'clock precisely. Specimens, plans, and sections may be seen, and all particulars obtained, from Mr. W. MERRY, Surveyor, at the Vestry Hall aforesaid, between the hours of TEN and TWELVE a.m. The party whose Tender may be accepted will be required to procure two sureties of 200l. each for the due performance of the works. The expense of the contract bond to be paid by the contractor. The Vestry do not bind themselves to accept the lowest or any Tender.—By order,

FREDK. AVELING, Vestry Clerk.

Paddington, February 4, 1864.

EXETER IMPROVEMENT ACT.—POSTPONEMENT of TIME for RECEIVING TENDERS.—The Commissioners of Improvement for the City of Exeter are desirous of receiving TENDERS for LAYING DOWN a new FLAGGING in parts of the High street of the City, to the extent of about 3,000 superficial feet. The flags must be from the quarries in the neighbourhood of Bradford or Halifax, Yorkshire. The specifications for the work required can be obtained on application at my Office. The Commissioners do not engage to accept the lowest or any Tender. Tenders to be delivered at the Office of Mr. W. BUCKINGHAM, Clerk to the Commissioners, 12, Southernhay, Exeter, ON OR BEFORE FRIDAY, THE 26TH OF FEBRUARY INST.

THOS. WHITAKER, City Surveyor.

Dated, Musgrave's-alley, Exeter, 20th January, 1864.

TO BUILDERS. — TENDERS are required for the ERECTION of an ASSEMBLY ROOM at the GUN TAVERN, Church-street, Croydon, for Mr. Boyston.—The drawings and specification can be seen on the premises until TUESDAY, the 16th instant, on which day Tenders will be opened at THREE o'clock p.m. The lowest or any Tender will not necessarily be accepted. HENRY BANCE, Surveyor.

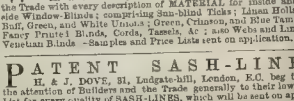
Croydon, 4th February, 1864.

TO BUILDERS. — Persons desirous of TENDERING for the different WORKS to be done in the ERECTION of a RESIDENCE, for J. H. Craven, esq. at Stronglone, Keighley, may see the drawings and specifications of the same, and obtain bills of quantities, at the White Swan Inn, in Keighley, aforesaid, after FRIDAY, the 12th inst. Bills of quantities may also be obtained, and further information, if required, on application at the White Swan Inn, or at my Office, after the said date. Sealed Tenders, endorsed "Tenders for Residence," to be delivered at the said White Swan Inn, or at my Office, in Leek, on or before MONDAY, the 22nd inst. The lowest or any Tender will not necessarily be accepted, and sureties will be required for the due performance of the contract.

WILLIAM SUGDEN, Architect.

Leek, Stafford, February 3, 1864.

ABERDEEN WATERWORKS EXTENSION.—Gravitation Supply from Cairnton.—Alteration of Former Plans and Specifications.—The Commissioners under the Aberdeen Police and Waterworks Act, 1862, are prepared to receive TENDERS for CONSTRUCTING and MAINTAINING the REQUIRED WORKS, consisting of the Aqueduct (about 20 miles long; for conveying water from the River Dee at Cairnton to Aberdeen, with the several filters tanks, conduits, hydrau ic engine, cast iron pipes, &c. and other appurtenances. The plans and specification of the works, with general conditions of Contract, all as now revised, may be seen at the Commissioners' Office, No. 50, St. Nicholas-street, Aberdeen, and sealed TENDERS are required to be delivered on or before MONDAY, the 29th day of FEBRUARY, 1864, at TEN o'clock before the forenoon, addressed to "The Commissioners of Police, Aberdeen," marked "Tender for Waterworks." Persons desirous of contracting may submit offers for constructing and maintaining the whole of the works, or such portion or portions, section or sections thereof, as are particularly defined and described on the plans and in the specifications and general conditions. The ironwork forms one of the sections for which a distinct Tender may be made. The Commissioners do not pledge themselves to accept the lowest Tender or any Tender, unless the same shall be satisfactory in all respects, and the securities approved.



Aberdeen, 28th January, 1864. GEO. MILNE, Clerk of Police.

BOARD of WORKS, WHITECHAPEL DISTRICT.—A Meeting of this Board will be held on MONDAY, the 15th day of FEBRUARY, 1864 at SIX o'clock in the evening, at the Office of the Board, No. 15, Great Alie street, Whitechapel, to receive TENDERS for CLEANSING the STREETS and GULLIES, and for REMOVING the DUST and other REFUSE within the District, for the period of One year from the 1st of April next, and for WATERING the SAME during the Summer months of such District, for the period of six months from the same date. Persons disposed to Contract may obtain printed forms of Tender, and such information as they may require, at the Office of the Board, No. 15, Great Alie street. Tenders, in a 40l. note is to be inclosed, must be delivered at the Office of the Board previous to the hour of meeting; and any Tender which is not upon the printed form prepared by the Board, and Signed by the persons or persons Tendering, as well as by the persons proposed as sureties, will be rejected. Persons Tendering are required to attend the Board at Half past SIX o'clock to sign the preliminary agreement to be signed by the person whose Tender is accepted. The Board do not, however, bind themselves to accept the lowest or any Tender. ALFRED TURNER, Clerk to the Board.

15, Great Alie-street, Whitechapel, 2nd February, 1864.

ESTABLISHED 1744.
AUSTIN'S IMPERIAL PATENT SASH and BLIND LINES.
To BUILDERS, CARPENTERS, and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to the
IMPERIAL PATENT FLAX SASH-LINES, of which he is now making four qualities, and he strongly recommends them in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give much satisfaction to the consumer.
They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

WINDOW-BLIND MATERIALS.
H. & J. DOVE, 31, Ludgate-hill, London, E.C. Supply the Trade with every description of MATERIAL for inside and outside Window-Blinds; comprising Sun-blind Sticks; Lines Hollands; Bull, Green, and White Scrims; Cotton, Linen, and Blue Tammies; Fancy Printed Blinds, Cords, Tassels, &c.; also Webs and Lines for Venetian Blinds.—Samples and Price Lists sent on application.

PATENT SASH-LINES.
H. & J. DOVE, 31, Ludgate-hill, London, E.C. beg to call the attention of Builders and the Trade generally to their low Price List for every quality of SASH-LINES, which will be sent on application, or a Sample Order will receive immediate attention. In cases where the parties are not known, a reference in London is indispensable.—Established A.D. 1797.

ROBBERY PREVENTED!
THE NEW UNPICKABLE LOCK (PATENT).
The advantages of this Wonderful Invention consist of its great simplicity, durability, cheapness, and its applicability to all purposes.—Sold wholesale at the Company's Office, 62, King William-street, City; and retail by all Ironmongers.

ST. PANCRAS IRON WORK COMPANY,

OLD SAINT PANCRAS ROAD, LONDON, N.W.

APPROVAL OF THE ROYAL VETERINARY COLLEGE.

THE MEDALS OF ENGLAND AND FRANCE,

And the Medals and High Recommendation of the Royal Agricultural Societies of England and Ireland.

SECURED BY EIGHT SEPARATE PATENTS. LATEST, 1863.

PATENT WROUGHT-IRON STABLE FITTINGS

SHOULD BE ADOPTED FOR THE FOLLOWING REASONS, viz.:—

That the BREAKAGES in Cast-Iron Fittings are numerous, and that one fracture from a kick, or other cause, may occasion an injury to a Horse, and involve a loss equal to the entire expense of fitting up the Stable. The fear of this has led to the use of wood, and, in the case of Cast-Iron GUTTERS, to the adoption of another and less effective mode of draining.

PATENT ENAMELLED TOP PLATE MANGER, with RACK & WATER-TROUGH,

The whole of which, except the Rack, being enamelled, can be kept as clean as a DINNER PLATE.

THE HALTER BALL, ATTACHED BY A NEW IMPROVEMENT, WORKS NOISELESSLY, AND ALMOST WITHOUT FRICTION.

PATENT FASTENINGS FOR THE DOORS OF LOOSE BOXES.

These Catches and Hangings work easily, are self-acting, and cannot be put out of order: by their use all projections by which horses are often blemished are rendered impossible; advantages peculiarly their own.

THE PATENT HARNESS FITTINGS

Keep the Harness and Saddles in shape, and are constructed so as to admit the air getting to the underside of them when hung up, thereby insuring a quick and perfect airing from any wet or moisture.

EVERY DESCRIPTION OF STABLE FURNITURE.

N.B. Manufactory for the Patent Stable Fittings and Enamelled Mangers.

SMOKY CHIMNEYS.

S. DEACON

Respectfully invites the attention of Architects, Builders, &c. to his

PATENT LOUVRE CHIMNEY CAP,

which has been in use some time with perfect success, many curing chimneys where other caps have been of no avail.

The advantages attending this Cap are—it can be thoroughly cleaned by the machine when the chimney is swept, the brush being able to pass through the Cap without the liability of displacing it; an increased up current, and the impossibility of a down one.

Prospectus, with testimonials, forwarded on receipt of Postage Stamp, by

PATENT WORCESTERSHIRE RANGE.

PRIZE MEDAL 1862, AWARDED FOR EXCELLENCE.

The above RANGE is most complete, and strongly recommended for its unrivalled ECONOMY, CLEANLINESS, CONVENIENCE, DURABILITY, and is a certain CURE for SMOKY CHIMNEYS.

It is an entirely new invention, and consists of large MEAT ROASTER, PASTRY OVEN, and WROUGHT-IRON BOILER. The top forms a HOT PLATE for BOILING, STEWING, &c. The whole heated by ONE SMALL FIRE. One 5 feet wide is equal to an ordinary Range 8 feet wide.

Extracted from the "London Daily Telegraph," May 19th, 1862.

"INTERNATIONAL EXHIBITION, CLASS 31.

"Of the most recent inventions it should be said that Messrs. JONES & ROWE'S Patent Worcestershire Range has attracted very special attention, and has been commended by the best authorities. A valuable peculiarity of their Ranges is the placing of the OVEN and ROASTER one above the other instead *it side by side*; and the ROASTER is constantly replenished with fresh air."

RYFFEL'S PATENT

HYGEIAN STOVE, heated either by coal or gas. With one penny worth of coal this Stove affords for twenty-four hours a genial, healthy, and uniform temperature, free from any smell or decomposition of the air. It was favourably noticed in the "the Lancet" of February 1st, 1862, and recommended as the only stove particularly suitable for the bed or sick-room.—For particulars apply to the Depôt, where the Stove is sold and may be seen in action.

can be seen in operation daily at the SHOW-ROOMS of the MANUFACTURER,

Wm. ADDIS, Wholesale and Retail Ironmonger, Stove Grate and Range Manufacturer,

6, 7, & 15, LEICESTER STREET, LEICESTER SQUARE, LONDON.

A Prospectus, with full Description and Price of the above, will be sent per Post on application.

EXHIBITION PRIZE MEDAL, 1862, AND MEDAL OF ROYAL AGRICULTURAL SOCIETIES OF ENGLAND AND IRELAND.

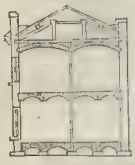
MUSGRAVE'S PATENT STABLE and HARNESS FITTINGS.

MUSGRAVE'S PATENT HARMLESS LOOSE BOXES.

MUSGRAVE'S PATENT IRON COW STALLS and PIGGERIES.

Architects who have not seen these fittings are requested to write for engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition.

They can be seen in first class stables in almost every county in England; and MUSGRAVE, BROTHERS, are now fitting several very large establishments under direction of London architects, noted for employing only what is the best of its kind.



Musgrave's Patent Slow-combustion Stove

Is the nearest approach to Warming by Hot Water. It will burn in churches from Saturday till Sunday evening, without attention during the hours of worship. In halls will burn day and night for weeks, with little care. Capable of warming a large apartment for twenty four hours, at a cost of 3d.; and deserving of special attention because of its safety, healthfulness, durability, and extreme simplicity.—For full particulars apply to

MUSGRAVE, BROTHERS, Ann-street Ironworks, Belfast.

THE DENNETT ARCH.

Allowed to be the cheapest fireproof construction known, and used with the greatest success for the last ten years in the Midland Counties, and has been adopted by G. G. Scott, esq. for the New Foreign Offices, used in any form of arch, groin or dome; turned to any length, width, or height, forming a perfect floor and ceiling in one mass, from 9 inches in the crown to any required thickness.

Address to the Patentees,—A. & R. DENNETT & CO. NOTTINGHAM.

TESTIMONIAL.—"I have made use of Messrs. Dennett & Co.'s material for Fireproof Arching, and though I have, happily, had no practical experience of its resistance to fire, I can bear witness to its strength, and to the extreme convenience of application. I have made use of it in positions in which I should have found it difficult to introduce any other description of material, and it has this advantage, that the arch is constructed of it almost entirely in one mass that it covers the space like a compact shell or inverted bowl, and are, consequently, almost wholly free from lateral pressure.

"GEO. GILBERT SCOTT, 20, Spring Gardens, London"

NOTICE TO ARCHITECTS AND THE TRADE.

CRYSTAL GALLERY, EGYPTIAN HALL, PICCADILLY.

J. DEFRIES & SONS,

GAS ENGINEERS AND MANUFACTURERS OF

CRYSTAL, BRONZED, AND ORMOLU CHANDELIERS, IMPROVED CRYSTAL STAR AND SUN LIGHTS,

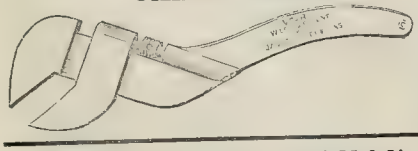
For Lighting and Ventilating Public and Private Buildings.

J. D. & SONS beg most respectfully to call the Architects and the Trade, that having been selected to open a West-end Branch they have taken the DUDLEY GALLERY, EGYPTIAN HALL, PICCADILLY, and at an enormous outlay they have made it replete with every description of Lighting, from the most simple, to the RE-ARRANGED DESIGNS of MEDIÆVAL GAS FITTINGS, CRYSTAL, BRONZED, ORMOLU, and ELECTRO PLATED Pendants, Brackets, Arcuate Lights, Bronzed and Gilt statuettes.

SPECIAL DESIGNS PREPARED in strict ACCORDANCE WITH Architectural Arrangements. Estimates furnished FOR THE LIGHTING and Fitting up of Theatres, Music halls, and Public or Private Buildings with Gas, &c.

The usual trade discount allowed, as at their

MANUFACTORY and CITY SHOW ROOMS, 147, HOUNDSDITCH, CITY.



BY HER MAJESTY'S ROYAL LETTERS PATENT.

WILSON'S DOUBLE-ACTION SCREW SPANNER,

MANUFACTURED BY

JAMES HEELEY & SONS,

Mount-street, Birmingham.

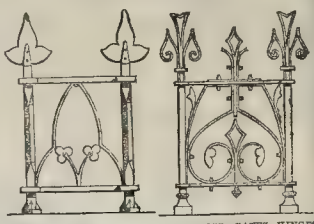
The superiority of this Spanner consists in its novel and rapid mode of adjustment by a double action screw, and its new and convenient arrangement of curved handle and slit jaw pieces, which, combined with its superior strength and excellent workmanship, render it by far the best and handiest tool of its class hitherto produced. It is being extensively used by Engineers, Manufacturers, Machinists, and Railway and Steamboat Companies, and can be had of all respectable Ironmongers.

J. GURMAN,

Inventor and Patentee of a New SASH POCKET and Fittings,

For Weight and Balance Sashes, for Cleaning, Repairing, or Painting Windows.

They can be taken out in a minute, and replaced in same time. Old Windows can be altered. Any person allowed to work the Patent, on purchasing the Pocket Pieces and other Fittings of the PATENTEE, 4, ONSLOW ROAD, Southampton; or of Mr. G. BRABERLY, 11, GARLICK HILL, Cannon-street, London, where Windows may be seen, and information obtained.



Also of the following Agents:—

LIVERPOOL—Mr. T. C. OWEN, PRINCE'S BUILDINGS, NORTH JOHN STREET.

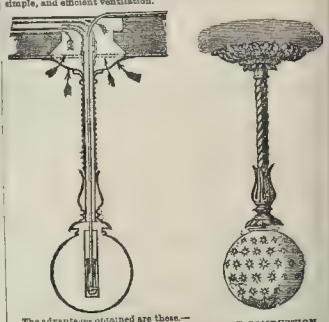
53 to 58, WYCH STREET, STRAND, W.C.

Show Rooms also, 20, Cockspur-street, Pall-mall, LONDON, S.W.

JOHNSTON, BROTHERS,

MEDIÆVAL METAL WORKERS AND GASFITTERS.



Manufactory, 190, High Holborn, London.

Drawings and Estimates furnished.

RICKETT'S & HAMMOND'S VENTILATING GLOBE LIGHT,

combining an agreeable method of lighting, with convenient, simple, and efficient ventilation.

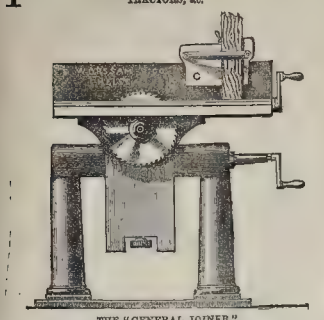
The advantages obtained are these.—

A TOTAL REMOVAL OF ALL PRODUCTS OF COMBUSTION.

A COMPLETE DISPLACEMENT OF HEATED AND VITIATED AIR.

AND A CONSIDERABLE ECONOMY IN THE CONSUMPTION OF GAS.

A GLOBE LIGHT will consume 5 to 7 feet of gas per hour, giving as much light as an ordinary three-light chandelier, with a consumption of 12 feet per hour.

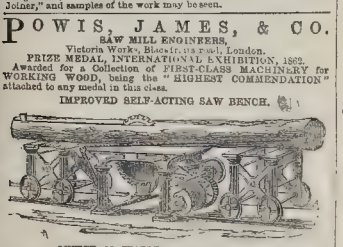


No. 8, CHANDOS STREET, CHARING CROSS, LONDON, W.C.

HENDERSON'S PATENT DERRICK CRANE.—Prize Medals for Practical Utility and Moderate Cost.

HENDERSON'S PATENT DERRICK CRANE, so extensively used in the building of the Exhibition, London, can always be had from the Makers, from 10cwt. upwards, Portable, Foundry, Forge, Wharf, Quarry, Warehouse, and other descriptions of Cranes; also Steam Winches and Cranes (on the Derrick principle). Water Companies and others can also be supplied with our Improved Sluice Valves.—For further particulars apply to BOWSER & CAMERON, Makers, Springfield Iron Works, M'Neil-street, Glasgow.

TO BUILDERS, JOINERS, CONTRACTORS, &c.



THE "GENERAL JOINER."

SAMUEL WORSSAM & CO. having long felt the importance of introducing a LABOUR-SAVING MACHINE, which by combining several operations at a moderate cost, should meet the requirements of builders and others engaged in the conversion of timber, beg to offer for this purpose their "General Joiner" as above, which in its present greatly improved form will, with 2-horse power, do the work of at least fifteen skilled joiners, in SAWING, CROSS CUTTING, and SQUARING, PLANING, and THICKNESSING, MORTISING, TENONING, GROOVING, TONGUING, RABBETTING, BORING, BEADING, MOULDING, CHAMFERING, &c. &c.—For priced illustrated circulars, apply to S. WORSSAM & CO. Saw-Mill Engineers, King's-road, Chelsea (sole manufacturers), where the "General Joiner," and samples of the work may be seen.

POWIS, JAMES, & CO.

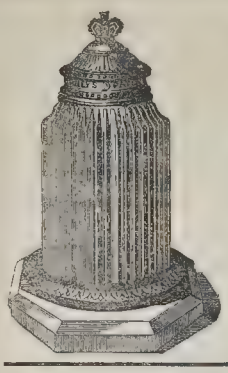
ROCHDALE, NEAR MANCHESTER.
London Office, 9, Adelaide-street, Adelphi, W.C.

Patent MOULDING and PLANING MACHINE, for Planing Floor and Match Boards, and working Mouldings.
Manufacturers of Sawing, Planing, Moulding, and Wood-working Machinery of every description, suitable for Builders, Contractors, &c. Steam Engines and Rollers, Shafting, Gearing, &c.
Full sets of Wood-working Machinery to be seen in operation daily at the Works, Rochdale.

PERIN'S PATENT

FRENCH BAND SAW BLADES.

SAMUEL WORSSAM & CO. having purchased of M. Perin, of Paris, the sole right to import and sell his BAND SAW BLADES throughout the United Kingdom, beg to announce that they are now in a position to supply these Saws from 1-16th of an inch to 8 inches in width, and up to 60 feet in length.

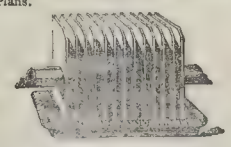


The vast superiority of Perin's Band Saws over any others in point of finish, toughness, durability, and evenness of temper, is now everywhere admitted.

S. W. & CO. keep a large stock of all sizes up to 2 inches wide, from which they can supply orders to any part of the kingdom within twenty-four hours' notice.

For Price Lists, apply to

SAMUEL WORSSAM & CO.
SAW MILL ENGINEERS,
304, KING'S ROAD, CHELSEA, S.W.



A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER, at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Iron-mongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions, China, Glass, and Wood Furniture, of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilators 4s.; and the New Registered Venetian Ventilator, so much admired, 6s. 6d. each.
J. H. BOOBBYER (late STURCH & BOOBBYER), established nearly 200 years, for the supply of GOODS of the BEST MANUFACTURE, at the LOWEST PRICE.
14, Stanhope-street, Newcastle-street, Strand, London, W.C.

THE LONDON WARMING AND VENTILATING COMPANY LIMITED,

26, GREAT GEORGE-STREET, Westminster, S.W.
MANAGER, MR. WOODCOCK.

Churches, Greenhouses, Offices, and Buildings of every description warmed by means of a modification of the plans successfully used during the last five years by Mr. Goldsworthy Gurney in both Houses of Parliament.
Steam, Hot Water, Gas, and in open or enclosed fire-places, Coal and Coke, are equally available for the process.
The cost is less and the effect greater than that of any other known Plans.

The Horticulturalist will find herein an instrument of new and important powers.
The Apparatus may be seen in operation in ST. PAUL'S CATHEDRAL, the various offices of the "Department of Science and Art," and at the Architectural Societies' House, 9, Conduit-street, Regent-street
Particulars and testimonials forwarded on application.

ESTIMATES FURNISHED. EXPERIENCED WORKMEN SENT TO FIX WHEN REQUIRED.
Kitchen Ranges, Stoves, Fenders, Fire Irons, and Furnishing Ironmongery.
DEANE & CO. (THE MONUMENT), LONDON BRIDGE.
ESTABLISHED A.D. 1700.—ILLUSTRATED CATALOGUES POST FREE.

HOBBS, HART, & CO.'S MACHINE-MADE LOCKS AND STREET-DOOR LATCHES.

These Locks are recommended for all purposes requiring good ordinary security combined with economy of price and durability of wear; as, by means of machinery, a faultless accuracy is arrived at which by hand-labour would be impossible except at a greatly increased cost.

The security of these Locks consists in a series of Levers that have to be raised to unequal positions by the bits of the key before the bolts can pass. These will bear comparison with those at trebie their cost.

These Locks are made from two to five levers, and also in suits to differ, with master-keys to pass.

The retail prices for Cabinet purposes is from 2s. to 4s. each; for Room Doors, 4s. to 9s. 6d. each; Street Door Latches, 7s. 6d. to 18s. each.

The 2-bolt 4-lever Mortise, with Hobbs & Co.'s Patent Follower, price 8s.

HOBBS, HART, & CO.'S PATENT PROTECTOR LOCKS.

300 Guineas were offered in the late Exhibition to any one who could Pick these Locks in thirty days. Their speciality consists in their combining the two essentials of security, viz.—protection against picking, by means of their Patent Moveable Lever Protector, and protection against illicit tampering with the Lock through the key-hole, and also tampering with the key, by means of their Patent Nozzle Protector.
These all-important principles are the special and peculiar features of HOBBS, HART, & CO.'S Patent Locks. These Locks vary in price from 10s. to 50s. each, with solid keys. For prices with changeable keys, see 16-paged Illustrated List of Locks, Iron Door Safes, &c.

HOBBS, HART, & CO. 76, CHEAPSIDE, LONDON, E.C.
Manufactory—BRITANNIA FIELDS, WHARF ROAD, CITY ROAD, N.

FIRE-PROOF CONSTRUCTION.—

FOX & BARRETT'S PATENT.
This improved system of fire proof construction has been most extensively adopted, and its application has been found to fully EVERY DESCRIPTION OF BUILDING, whether public or private.
The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.
The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof form in adapted to receive a finished surface, either of the ordinary flooring boards, or of cement, asphalte, tiles, slate, or other material.
Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one
Further information may be obtained of the Proprietor of the Patent,
MR. BARRETT,
12, YORK BUILDINGS, ADELPHI

NAILS and IRONMONGERY

IMPORTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models bearing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.

JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

JAMES W. TYLER, CONTRACTOR FOR DEVAUX'S VIEILLE MONTAGNE THICK ZINC ROOFING,

ON IMPROVED PRINCIPLES.

12, ABINGDON STREET, and 4, WOOD STREET, WESTMINSTER, close to Victoria Tower.

Estimates furnished for every description of Zinc Roofing and Guttering, inclusive or exclusive of Timber or Iron Framing, in all parts of England.

Having for several years been actively employed in laying DEVAUX'S THICK ROOFING ZINC (the purest extant) upon the new principles introduced by Mr. Edmeston, Mr. TYLER can refer with confidence to work done as his best recommendation.

Good Zinc badly laid will still be a failure, for there is much more importance in the mode of laying than is yet generally known; and parties who will intrust their work to Mr. TYLER will find that this important point is thoroughly attended to, and at no extra cost.

This Zinc thus laid is quite as lasting as lead, if the woodwork is arranged according to Mr. TYLER'S directions.

JUROR—Class XXVI.

JUROR—Class XXX.
INTERNATIONAL EXHIBITION
1862.

DESACHY'S FIBROUS PLASTER.

GEORGE JACKSON & SONS,

HAVING BECOME THE PROPRIETORS OF THE PATENT RIGHTS IN

DESACHY'S FIBROUS PLASTER,

Beg to call the attention of Architects to its Capabilities.

It is adapted for the speedy and economical production of any coffered or circular work, waggon-headed ceilings (all bracketing being saved), as it is fixed to the joists direct), fluted and plain columns, panelled dados, all kinds of diaper, &c.; for the linings of walls and ceilings, and for all purposes of ornamental plaster.

The advantages are great. It is of great lightness and of excellent quality; it is not inflammable, and is ready to be painted immediately after it is made; it has been used (under the direction of Owen Jones, esq.) for the ceiling of St. James's Hall; at Messrs. Oaler's, Oxford-street; Mr. Hancock's, New Bond-street; the Crystal Palace Bazaar; the Home for the Aged, South Lambeth; and at various other Works.

SPECIMENS CAN BE SEEN AT 49, RATHBONE PLACE.

DESIGNS MADE FOR ANY WORKS.

LITHOGRAPHED DESIGNS OF CEILING FLOWERS, &c. SENT FREE ON APPLICATION.

1855.

PRIZE MEDAL—Class X. (c)
INTERNATIONAL EXHIBITION
1862.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By the process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Baryte from ten to thirty per cent. Without the knowledge of the Purchaser. Hubbuck's Patent Zinc Paint, or any Pure Zinc Paint, is tasteless, no workman can produce good work with such adulterated Paint, and it will never willingly use any other Paint for their best work.

CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK TO BE STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

MONEY on FREEHOLD and LEASEHOLD PROPERTY, by the

MUTUAL LOAN FUND ASSOCIATION

Incorporated by Act of Parliament, 1853, 18, BASSHALL STREET, Covent Garden, W.C. A Balance from Profits, upon Freehold and Leasehold Property for any Term not exceeding ten years. Mortgages redeemed, and the advance can be repaid by easy instalments. Facilities afforded to borrowers to purchase the Houses they occupy, and the repayment of the amount taken on mortgage. Greater advantages are offered to borrowers than in building societies, there being 5 shares to subscribe for, or compensation for an advance, and no deduction from the loan. No preliminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope.

EDWARD HARPER, Secretary.

ADVANCES are made by the SOVEREIGN

The Builder.

VOL. XXII.—No. 1096.

Condition of Buckinghamshire.

THE Cottage dwellings to which we directed attention in our previous notes of this district,* were of comparatively old date. If we look to the more recently constructed houses which are intended to supply the place of those which are rapidly passing away, we find with regret little increase in the size of the rooms. The foundations are better laid; the red-brick walls, the internal plastering, and the slated roofs, are better than the thatched roofs and mud walls of the older places: but the new rooms are often but little if any larger. Even when different materials are brought into use, it seems difficult to fall into other and better plans. Experience of the old cottages should have taught the builders to allow additional space, and increased sanitary knowledge should have shown the need for larger windows, and thorough ventilation. Small windows, the result of bygone legislation and the dearness of glass, are still used, though the reasons have disappeared. In parts of Aylesbury some new houses have been built back to back, and in some instances two-roomed dwellings, of two stories in height, have been erected without any opening at all at the back. There are better planned houses which have been recently erected in Aylesbury, but it is to the homes provided for the labouring classes that we wish particularly to direct attention, and it would be well if better plans were introduced for such residences than any we have yet seen in this district. Let us again remark that the amount of poor-rates, both in the country and in the town districts, materially affects the condition of the homes of the poorer classes. In Buckinghamshire parishes, the variation of the rates is no less marked than it is between those of Whitechapel and Bethnal-green, and St. George's, Hanover-square. For instance, in Aylesbury, the poor-rate is 1s. in the pound per quarter, on the rental; in Fleet Marston, it is only 2d. in the pound; and in some parishes it is less than that; but even this difference is very marked. The poor-rate on a rental of 3,000*l.* at 4s. in the pound per annum would amount to 600*l.* a year; the 2d. rate per quarter on the same rental would amount only to 100*l.*, leaving a difference of 500*l.* a year; a sum which, if wisely used, might effect many improvements. So far as we are able to judge, except the driving of families from surrounding districts, there seems to be no particular reason why the rates at Aylesbury should be so much in excess as they are.

We will, however, look in another direction, and so proceed towards Tring, on a pleasant road leading towards the Chiltern Hills. On this, as on the other roads, the absence of cottage-dwellings for a considerable distance from the town of Aylesbury is a marked feature of the landscape. The cemetery is neatly laid out, and there are chapels for the use of Church people and Dissenters. And here it may be remarked that throughout this county there are several Dissenting places of worship, some of them belonging to the Wesleyan Methodists, who have shown a praiseworthy activity in the establishment of schools.

On the roads we meet some painful groups: families, consisting of a man, his wife, and two or three children, each with a wallet of size proportionate to their strength, containing all their worldly possessions. Some of them are decent-looking people, in search of work, going a few towards Liverpool and others towards London. There are sailors, sadly foot-sore, who, having failed for some reason in procuring a ship in the Thames, are on their way to the Mersey. Some artisans have had relief at different towns, in consequence of being connected with the trade societies. These were also assisted in procuring lodgings; but from others we heard complaints, particularly from those who had children with them, of the difficulty of finding a shelter for the night. Houses founded, like Watts's Charity, for the reception of decent people when on tramp, would be very useful in such places as Buckingham, Tring, and Aylesbury. Besides the worthy class mentioned, there are sturdy and practised beggars who take to the road, on the pretence of seeking work, often levying contributions at lonely houses or from solitary wayfarers.

At Halcott the parish church has been restored and a school built by Baron Rothschild. The school is presided over by certificated and pupil teachers, and well conducted. The ventilation of the rooms for boys and girls is well attended to, and here, besides ordinary learning, there is taught the knowledge of the principles of health. Proof occurred to us in a little house at which we called. A girl said, "Mother, depend upon it, if we shut the bed-room door and window again, we shall be found dead one of these mornings; for, being shut up, we poison ourselves with our breath." This girl was a pupil at the Baroness Rothschild's school, from which we trust many sanitary missionaries may be sent out. Besides the restoration of the church here, the Baron has shown his liberality in assisting Dissenting congregations. We heard a story of an elderly lady who, calling on Baron Rothschild, said that their chapel sadly wanted a stove, and without it the winter weather would be bad for old people to bear. In the course of a short time a good stove was in its place.

BUCKINGHAMSHIRE HOMES.

Sketch of Cottage referred to in our last, showing dangerous Proximity of the Piggery. The wall is removed for the purpose.

Modern Cottage, Ashton Clinton.

Ashton Clinton is a beautiful village, and, in the summer time must display masses of greenery most pleasant to the eye. This village, which lines the road to Tring for a considerable distance, with the parts surrounding, chiefly belongs to the Baron and Sir Anthony Rothschild. Here, in all directions, are indications of improvement; many old cottages have been removed, and new ones built; such as we have sketched. But we are again forced to complain of the small cubic space allowed in the interior of some of these dwellings. If, instead of from about 11 feet by 7 feet in length and breadth, and 6 feet in height, the dimensions were 13 feet in length by 9 feet in breadth and 7 feet 6 inches in height, in the lower room, the advantage would be great. The upper rooms of two-roomed cottages are generally made of even smaller size than those below. This, remembering the manner in which the upper apartments are used, is a great mistake. Considering the numbers who often crowd them, and their being generally without fireplaces, there should be more space allowed them in the rooms below. If they were of the size we have named, it would only be an allowance for four persons of 220 cubic feet of space each. In the Portman-street Barracks there was an allowance of 250 cubic feet of space for each inmate, and that was found to be barely half enough for the purposes of health. In all instances the space of the sleeping apartments might be considerably increased by making the ceiling at the same angle as the roof instead of horizontal, still keeping a space between the two. Small gables on each side of the roof, in which a glazed ventilator could be fixed, would be of advantage. We press these figures upon the attention of cottage builders; for the extent of space is a matter most insufficiently considered.

We fear that there is much overcrowding in this village. Near the Aylesbury end of it there is a beer-shop which has not been long built, and the ale trade not proving very flourishing, the place has been let in tenements. In one of the rooms the occupants were, we heard, a man and his wife, a boy sixteen years of age, two other boys of about four and five years, and four young women,—in all nine persons. Without remarking on the indecency of the arrangement, the evil to health of nine people using an apartment during the day and sleeping in it at night, in a space of not 900 cubic feet—allowing only 100 cubic feet to each inmate,—is evident.

In another room in this house, we are told, on reliable authority, there are generally nine lodgers accommodated each night, and often more. Some of this number are shoemakers, who are constantly there, and the others are tramps. The regular lodgers pay 1s. a week each, and the casual lodgers 4d. a night. A large rent must in the year be derived from this apartment, which is one of the certain sources of typhus fever and other serious disorders.

Some pretty houses come to view as we pass through this village — houses of a better class than those occupied by farm labourers: some of the gardens, even at this time of the year, are pictures of neatness. The "everlasting flowers" of red, yellow, and other hues, foiled by green plants of various healthy tints, the snow-white curtains, and the clear glass in the windows, show that the care taken with the village has not been bestowed in vain. The picturesqueness of the woods which rise on one side, backed by the grey tops of the Chiltern hills, and the peeps over a distant country on the other, delight the wayfarer. With better drainage, better water supply, improved cottages, having better closet accommodation, this might be made as healthy and delightful a village as any in the south of England. At present the water is partly obtained from wells in the usual way; but some gather this necessary from a brook which runs rapidly from the hills. When, however, the scheme of the Aylesbury water supply is completed, as we hope it shortly will be, pure water will be brought in pipes through the place, and will be available for general use.

Passing on towards Tring, we find, on the land of another proprietor, that a row of brick cottages has been built in front; and extending over a considerable space are plots of garden-ground. The site for these is not well chosen, being at some depth below the highway, and forming a sort of platform, from which the ground rises for a considerable distance. These situations are always dangerous, unless the drainage is well intercepted and carried from the platform to the lower levels. Gibraltar, near Dinton, is situate somewhat in this way (as our sketch shows), and we have before referred to other places in similar positions, where serious sickness has been the result.

Cultivation is rapidly spreading. Extensive fields of young corn, of a most delicate green colour, from a distance present a perfectly smooth surface, contrasting with the rougher and more broken ground above, which is not without considerable value as sheep-walks.

Cultivation amongst the hills has a beauty as well as the more natural and rugged aspects there presented. A corn-field, either in the winter or spring time, or when the ripe grain is waving in autumn, is a pleasant object.

The formation of the ground here is singular; for parallel with the base of the hills run, in long ranges, gigantic furrows of a semicircular form, which decrease until they disappear in the level plain. It is near this spot that the new water reservoirs are to be made.

A short and agreeable journey leads to Tring, which is snugly placed near the bottom of the Chiltern hills. It is a neat and pleasant-looking town. In the main thoroughfare there are several good shops, and a number of inns with projecting signs, and some very old houses. The back parts are not satisfactory, and there are certain sanitary derangements which require especial care, and to which we may refer by and by. Tring is distant about seven miles from Aylesbury, and the station of the London and North-Western Railway is about two miles farther. A small omnibus goes two or three times during each day between Tring and the station; but there is no regular carriage between Aylesbury and Tring; and persons who have been accustomed to a bustling commercial population find the want of coach-conveyance from place to place inconvenient. By a roundabout route Aylesbury is put in communication with the metropolis; and at Winslow, ten miles and a half from Aylesbury, there is another branch station of the London and North-Western Railway. This line will ere long be carried through to Aylesbury, putting that town in communication with the town of Buckingham, and will be a means of adding much to the prosperity of both places and the district through which it passes.

There have been some model farms established in this county, and in other ways improvement has been made. Notwithstanding, there is much more to be done, not only in connexion with farm dwellings, but also in the general management of the land and the breeding of cattle. The refusal to grant long leases, and in some cases any lease at all, stands greatly in the way of improvement.

The education of the children of those who are employed on the land has been miserably and criminally neglected. They are sent to work for the chief part of the year at a very early age, and this prevents attendance at school during the day. They have to rise between four and five o'clock in the summer, and do not reach their homes until seven o'clock, and often later, in the evening, when, as the parents say, they are too tired to go to school. Some live scattered about at the distance of a mile and more from a school; and many mothers object to allow boys and girls to ramble for a distance in the dark winter nights. Nor does the difficulty as regards education exist amongst the agricultural class alone.

In one village we met with a man who had seven children: one was an infant, and the others boys and girls varying in age from three to fifteen years of age, who all, as well as the parents, worked at different branches of straw cutting and plaiting; their united earnings being considerable. None of them had been at school, although there is a good one close by the house in which they live. We spoke with several young men and women who did not know a letter in the alphabet; and when recommending the evening schools to them, they expressed regret that in more early years their education had been neglected, but they did not like to go amongst little ones to learn their A, B, C. There can be no doubt, however, that much of this feeling might be changed if the clergy of the parishes, and other persons of intelligence who take an interest in visiting the dwellings of the industrious poor, were to press the value of the evening schools upon the attention of those to whom they would be useful.

It is surely time that some strong and united efforts were made to raise the condition of the thousands who till the land.

VANDYCK IN ENGLAND.*

FAMILY PICTURES.

"When pensive on that Portraiture I gaze,
Where my four brothers round about me stand—
And four fair sisters smile with graces bland
The goodly monument of happier days—
And think how soon insatiate Death, who preys
On all,—has cropp'd the rest with ruthless hand:—
While only I survive of all that band
Which one chaste bed did to my Father raise,
It seems that like a column left alone,—
The tottering remnant of some splendid fane,
'Scap'd from the fury of the barbarous Gaul
And wasting Time which has the rest o'erthrown
Amidst Our House's ruins I remain,
Single unpropp'd, and nodding to my fall."
Thomas Edwards, circ. 1751.

Of *Family Pictures*, pictures something more than portraits, which Vandyck painted during his nine years' residence in England, the "Pembroke Family," at Wilton ("Pembroke's princely dome"),† is perhaps the most important. The hero of the composition (if I may be pardoned the expression) is that Philip Herbert Earl of Pembroke and Montgomery, son of "Sydney's sister," the same earl to whom the players dedicated the first editions (1623 and 1647) of Shakspeare and Beaumont & Fletcher. The composition consists of ten life-size figures, eight standing and two (the earl and countess) sitting. The grouping is not dramatically connected—all look out of the picture, all look unemployed. With these defects, it is still a very noble work; carrying the true Vandyck stamp upon it in every part,—better, as a whole, than the "Cornaro Family" of Titian or the "Arundel Family" of Holbein,—its range is more excursive,—and superior to the "Marlborough Family" of Sir Joshua, because it possesses more true nobility of character, though less of the lighter graces peculiar to the President.

This fine historical picture (for in this light the student of English history must necessarily view it) has suffered from fire and ignorant attempts at restoration. A large but poor engraving of it by Baron was published in 1740. Vandyck's small study for the composition is at High Clere, near Newbury, the seat of another Herbert, the Earl of Carnarvon.

A *second* family picture with life-size figures is at Windsor Castle—the family of the Sir Balthazar Gerbier to whom I have already had occasion to refer. This attractive composition—by some attributed to Rubens—was discovered and identified by Vertue; and on Vertue's recommendation was bought by Frederick Prince of Wales, father of George III., a prince who, had he lived to become her king, would have done much for the advancement of art in England.

A *third* family picture is the "Arundel Family," representing Thomas Howard, Earl of Arundel (of Marble, and now "Society" memory), his wife, and children; a picture never completed,

* See p. 76, *ante*. † Thomas Warton.

and now best known by a first design perpetuated by the graver of Vertue.

A *fourth* portrays the "Strafford Family," the three children of the great Earl of Strafford, viz., William, Lord Wentworth, afterwards Earl of Strafford (died 1695); Anne, married to Edward, Lord Rockingham; and Arabella, married to a son of the Earl of Clancarty. This picture was at Wentworth Castle, in Yorkshire, but I do not remember seeing it when I visited Wentworth in 1857. Vertue engraved it (1739) for the folio publication of "Lord Strafford's Letters and Despatches."

The *fifth*, the "Villiers Family," at Blenheim, admirably painted in a broad and sombre tone, represents the widowed Duchess of Buckingham, Catherine Manners (of the Rutland family), her two sons and a daughter; all in black dresses.

The *sixth* and last was the "Endymion Porter Family," now in the possession of Percy Smythe Viscount Strangford, a descendant of the once famous Endymion, to whom Sir William D'Avenant delights to allude so often in his "Herringman" folio. Its history is curious. It belonged to Sir Peter Lely, and was sold at Lely's sale to Sheffield Earl of Mulgrave and Duke of Buckinghamshire, for 155*l*. At the sale at Buckingham House (*circa* 1720) it was resold for 63*l*.* Beale, the friend of Lely, calls it "an excellent picture." This picture I have never seen.

Of *double portraits* (or two portraits upon the same canvas) the most celebrated is the half-length seated of "Thomas Wentworth, the Great Earl of Strafford, and his Secretary, Sir Thomas Maynwaring."

I will not attempt to describe this masterpiece of art,—what Lord Macaulay has done so well,† *ad vivum*, as it were, it would be presumption to rival or even seek to excel:—

"But Strafford, who ever names him without thinking of those harsh dark features, ennobled by their expression into more than the majesty of an antique Jupiter; of that brow, that eye, that cheek, that lip, wherein, as in a chronicle, are written the events of many stormy and disastrous years, high enterprise accomplished, frightful dangers braved, power unsparingly exercised, suffering unshrinkingly borne; of that fixed look so full of severity, of mournful anxiety, of deep thought, of dauntless resolution, which seems at once to forebode and defy a terrible fate, as it lowers on us from the living canvas of Vandyck."

Not content with this word painting, the noble historian has yet another attempt:‡—

"Portraits which condense into one point of time, and exhibit at a single glance the whole history of turbid and eventful lives,—in which the eye seems to scrutinize us, and the mouth to command us,—in which the brow menaces, and the lip almost quivers with scorn,—in which every wrinkle is a comment on some important transaction. The account which Thucydides has given of the retreat from Syracuse is among narratives what Vandyck's Lord Strafford is among paintings."

The *original* is at Wentworth House, Lord Fitzwilliam's seat, in Yorkshire, and will repay a pilgrimage to see it. The duplicate at Blenheim is comparatively poor.

Of a work like this, so deservedly famous, no particulars of moment can be too minute. In the diary of Mr. Beale is the following entry:—

"1677, May 22. Mr. Francis Knollys came himself and fetched away the original pictures of the old Earl of Strafford and Sir Philip Maynwaring, which had been left here for some years. It was carried away by two of the Lord Hollis's servants, whom Mr. Knollys brought with him for the purpose."

It is to a Knollys that we are indebted for the publication of the Strafford Despatches,‖ and the entry quoted proves that Knollys carried away *the original*, no doubt for the then Earl of Strafford, the son of the great earl, represented in the piece.

Next to the Strafford and Secretary in importance is (No. 2), the truly noble full-lengths of James Stanley, seventh Earl of Derby, beheaded at Bolton in 1651;§ his Countess Charlotte de la Tremouille, died 1663) and child, now at The Grove (Lord Clarendon's), in Hertfordshire. This picture was the property of Lord Chancellor Clarendon, and was estimated by his son Henry, in the valuation he made of his father's gallery, at 200*l*. The earl is in black, on the right of the composition: his wife, the noble defender (1644) of Latham House, who survived him, is in white satin, and the child in orange. The foliage is Titianesque; the condition all that can be desired.

A *third* and very celebrated picture is the double portrait of William Russell, Earl of Bedford (the first duke of the family), and George Lord Digby, afterwards Earl of Bristol—whole-length life-size figures. The fair-haired Earl leans in black with one arm on the base of a column, while Digby, in a rich red dress, stands erect, with his right hand resting on his hip. The original is at Althorp, in Northamptonshire, the seat of Earl Spencer, and is not only the finest Vandyck at Althorp, but is one of the master's most capital performances. Evelyn saw it in Beaufort House, Chelsea, then the Countess of Bristol's. The same subject at Woburn is an indifferent copy.

The Earl of Bedford, of this fine picture, died in 1700, and was the last survivor of the many who sat to Vandyck, the boy Duke of York (King James II.) only excepted; but Bedford sat as a man, and could say as he looked on his own portrait—"Vandyck, or 'tis sixty years since,—I remember the occasion, and I remember Sir Anthony."

A *fourth* not less fine full-length portrait portrays Lord John Stuart and his brother, Lord Bernard Stuart, legitimate Lenoxes,—lads of twenty and eighteen. The former fell at Cheriton Downs (1644); the latter at Rowton Heath (1645), both fighting for Charles I.* This expressive canvas is at Cobham Hall, in Kent, the seat of Lord Darnley. A duplicate (not so fine) may be seen at Wimpole (Lord Hardwicke's), in Cambridgeshire, and a *third* at Earl de Grey and Ripon's, in London. Lord de Grey's picture was bought by Anthony, Earl of Kent, at Sir Peter Lely's sale. Let the directors of the British Institution bring these three pictures together in one of their annual Pall Mall Exhibitions of Old Masters, and they will render a real service to Vandyck and to art.

A *fifth* of this twin-canvas character represents George Villiers, second and last Duke of Buckingham of the Villiers family (died 1687), and his brother Francis, killed at Kingston in 1648, at the age of nineteen, in the cause of King Charles I. When this picture was painted the Duke (Dryden's Zimri) was a boy of eleven, his brother about nine. It is most charmingly conceived, and most exquisitely coloured, full of unaffected dignity and ease. "Nothing [I endorse the words of Walpole] can exceed the nature, lustre, and delicacy of this sweet picture." It is at Windsor, and there is a fine mezzotinto from it by McArdell.

The *sixth* of this class maintains to the full the reputation of Vandyck. It is a knee-piece, painted in a light, yet warm tone, and represents Tom Killigrew, the wit (died 1682-3), and Tom Carew, the poet, the date of whose death is unknown. Killigrew was one of the Pages of Honour to the King, and Carew was "sewer in ordinary." Carew is seen nearly in profile; Killigrew (a pale, pensive, fair-haired young man) is drawn nearly full face, with a paper in his hand. It is marked with the name of Vandyck, and the date "1638.' Its descent is unknown beyond its purchase by Frederick, Prince of Wales (father of George III.), from Mr. Baguols, a dealer in pictures.†

There is a tradition connected with this picture which Vertue preserved and Walpole perpetuated. Killigrew and Carew had, it is said, a remarkable dispute in the presence of Mrs. (really Miss) Cecilia Crofts, Maid of Honour to Queen Henrietta Maria. What the dispute was about Walpole does not tell us, but he supposed the subject turned on "jealousy," as in a play by Killigrew, called "Tomaso, or the Wanderer," *was* a song "against jealousy, written on the same occasion." This is conjectural enough. I may add what Vertue did not know or had forgotten, that Killigrew was married to Henrietta's Cecilia in 1635-6, and that Carew wrote a poem on their nuptials.

That this exquisite specimen of Vandyck's art represents Killigrew and Carew I more than doubt. We have no other testimony, good as it is, than the faithful Vertue. I rather suspect that I have found the right persons (Vandyck's real sitters) and the occasion, in a pretty pastoral, too little known:—

A Song, by Sidney Godolphin, Esq., on Tom Killigrew and Will Murray.

Tom and Will were shepherds twain,
Who liv'd and lov'd together,
Till fair Pastora crost the plain,
Alack! why came she thither?
Pastora's fair and lovely locks
Set both their hearts on fire;
Although they did divide their flocks,
They had but one desire.

Tom came of a gentle race,
By father and by mother;
Will was noble, but, alas!
He was a younger brother.
Neither of them no huntsman was,
No fisher, nor no fowler;
Tom was still the properer lad,
But Will the better bowler.

Tom would drink her health, and swear
The nation could not want her;
Will would take her by the ear
And with his voice enchant her.
Tom was always in her sight,
And ne'er forgot his duty;
Will was witty, and could write
Sweet sonnets on her beauty.

Which of them she lov'd the most,
Or whether she lov'd either;
'Twas thought they found it to their cost,
That she, indeed, lov'd neither.
And yet she was so sweet a she,
So comely of behaviour;
That Tom thought he, and Will thought he,
Was greatest in her favour.

Pastora was a beauteous lass,
Of a charming sprightly nature,
Divinely good and kind she was,
And smiled on ev'ry creature.
Of favours she was provident,
But yet not over sparing;
She gave no loose encouragement,
Yet kept them from despairing.

Now flying Fame had made report
Of fair Pastora's beauty;
That she must needs unto the Court,
There to perform her duty.*
Unto the Court Pastora's gone
(It were no Court without her);
The Queen herself, with all her train,
Had none so fair about her.

Tom hung his dog, and flung away
His sheep hook and his wallet;
Will broke his pipes, and curst the day
That e'er he made a ballet.
Their nine-pins and their bowls they broke,
Their tunes were turned to tears;
'Tis time for me to make an end;
Let them go shake their ears."†

Will Murray, of the bedchamber (afterwards Earl of Dysart), was the too-much-trusted servant of King Charles I. Will picked his master's pockets at night and betrayed him. That fine Jacobean house at Petersham, near Richmond, in Surrey, has many memorials of him. His daughter was Duchess of Lauderdale, a name of note in English and in Scottish history.

PETER CUNNINGHAM.

ARCHÆOLOGIC ITEMS FROM ROME.

CERTAIN writers on Christian antiquity have questioned the validity of the decision put forth, in 1668, by the Roman "Congregation of Rites," respecting the signs of martyrdom infallibly to be recognized as such on tombs in the catacombs; and the conjecture having lately been revived, that the phial, stained with or bearing traces of blood, so often found in these hypogees, is *not* in every instance to be admittted as proof that the dead had suffered as martyrs for the faith; that same congregation has issued a decree confirmatory of the earlier one on this subject; defining, in the usual style of ecclesiastical absolutism, that phials of glass or terra-cotta, stained, outwardly or inwardly, with blood, when found in any tomb of the catacombs, *ought* to be received as indubitable evidence of the martyr's fate,—*censeri debeant martyrii signum*; a document dated December 10th, but more recently made public by the Congregation, which consists of several cardinals, prelates attached to the Papal court, and certain members of religious orders.

Fuller details have been published respecting the music archives lately re-arranged, catalogued, and transferred to a more suitable locality, in the Vatican, by order of the Pope. These mention, among the original MS. compositions by masters anterior to the sixteenth century, those of the most ancient "chapel-master" known to have been engaged for the papal choir, a Frenchman, named Dufay, who came to Rome in the suite of Gregory XI., on the restoration of the Holy

See from Avignon; also, about a century later, those of the Flemish composer, Jean Ockeghem, whose most admired work was a motet for thirty-six voices, produced in 1440. Among these codes, the most valuable, from an artistic point of view, are several adorned with exquisite miniatures, of the time of Leo X. and Paul III.

The *Bulletino di Archeologia Cristiana*, so ably edited—indeed, entirely written—by the Chevalier de Rossi, completed the first year of its existence at the end of December; and in that last number we have an interesting review of the progress of antiquarian discovery, at least in the sacred walk, during the past twelve months, in and near this city. Among these reports we may notice the additions to the range of catacomb-monuments secured by the extended excavations begun, and still in progress, under De Rossi's superintendence: the discovery, in the hypogee called after Pretextatus, of a chapel identified as the burial-place of Januarius, is another (not yet fully excavated) constructed in brickwork of the best imperial period, probably for the sepulture of Quirinus, another martyr, who suffered at the same time with the former, either under Trajan or Hadrian; and in the paintings of the chapel of Januarius (who was one of the seven sons of St. Felicitas, all martyred together with their mother) is presented a most valuable monument of the sacred art and symbolic system of the Church in the second century,—still more important than those in the Calixtan catacombs, hitherto considered among the earliest Christian paintings extant, which De Rossi refers to the period from Septimius Severus to Alexander Severus's occupation of the empire. In the *Ager Veranus*, or catacombs of St. Lawrence, above which stands the basilica of that saint, has been found a sepulchre (or rather sepulchral chapel), surrounded by symbolic pictures, interesting for their novelty and variety of meanings, full of mystic significations under the veil of biblical parable,—one assumed to be allusive to the mysterious vision said to have appeared in the sky to Constantine. A delicately-wrought gold cross, bearing religious inscriptions in Latin on both sides, found attached to the neck of a skeleton in a sarcophagus opened during the works (still in progress) for restoring the *S. Lorenzo* basilica, is referred to the period of Theodoric and the Visigothic kingdom. This relic has been placed in the library of the Vatican, in one of the cabinets filled with Christian antiquities from the catacombs; and the museum of that palace is soon to be enriched by other objects, recently purchased by the Pope, of high value in the range of antiques from Pagan source,—two gold vases, exquisitely wrought, found in the waters called *acque Apollinari*, at Vicarello (in the Comarca, or Roman province), and another vase of silver, on which is chiselled an itinerary from Cadiz to Rome, similar to those in the museum of the Roman College, engraved on three silver vases, all found in the same waters (whose classic name was *aquæ Aureliæ*), referred severally to the times of Augustus, Vespasian, and Nerva. At the last meeting of the Roman Archæologic Academy was read a second dissertation by Visconti on the mystic relief lately dug up at Porto (near Ostia), assumed to be an *ex voto* representing that ancient seaport of Rome in the time of Trajan. The Tiberine Academy, on a recent occasion, listened to a treatise by Padre Vercellone, a Barnabite monk, on the editions of the Scriptures printed in Italy during the fifteenth century; the learned father particularizing, among other noticeable productions of the early press in that sacred province, a complete Hebrew Bible printed at Soncino, near Milan, in 1488; three editions of the Greek Psalter brought out at Milan and Venice between 1481—1498; and no fewer than thirty-one editions of the Latin Vulgate, the first produced at Rome, 1471; the last and most perfect at Venice, 1495, in four folios, with notes, by a then distinguished Camaldolese monk, Bernardino Gadolo,—all these Vulgates being printed from MSS., the earliest of which did not ascend higher in date than the thirteenth century. At the last celebration of the Epiphany by the "Polyglot Academy" annually held at the Propaganda College, were declaimed compositions, prose and verse, in thirty-two languages (including dialects), some in the form of dialogue, several of the Oriental tongues illustrated by specimens of national song, or rather chant, as the mournful monotonies might be described; and this feast of languages was rendered more entertaining to the crowded audience by a *cantata* with vocal and instrumental music, expressly composed by Padre Jacovacci, professor of singing at this college,—a really grand and pathetic work of the oratorio class, its theme the Massacre of the Innocents; the performers, for the most part, Propaganda students; but the most gifted and fervently applauded, was a young Englishman, of Roman birth, named Davis, whose tenor voice may secure for him the highest triumphs attainable by *artistes* of the stage or concert-halls.

The census of the Roman population just issued, shows a number yet unequalled in past years, since this city has been governed by Popes,—201,161; being an increase of 4,083 on the returns for 1862; and among these numbers are at present living 31 cardinals, 36 bishops, 1,457 of the secular clergy, 2,569 of the regular, or monks and friars, 2,031 nuns, and 367 seminarists or students of ecclesiastical colleges.

A late discovery at Perugia, reported by the Institute, is that of an "Iliac Table," or series of small reliefs in several piles, or stories, on the same marble, representing scenes from the "Iliad," each explained by a Greek inscription above; similar in general conception and plan to a very curious illustration of the same epic subject in the Capitoline Museum, but still more valuable because comprising one scene from the "Odyssey," apparently belonging to a *second* series, in the same poetic reference, of which the rest has perished, the state of this marble rendering it indeed evident that we have here but a fragment of the antique original. A beautiful publication, lately issued from the chromo-lithographic establishment, founded here under the patronage of the Pope in 1861, and now occupying a wing of a deserted convent, is appropriated to the subject of the Virgin as represented in primitive Christian art, and contains six coloured plates from the earliest known pictures of this, the "Madonna and Child" subject, all extant in the catacombs; the historic monument, in the greater number, being the "Adoration of the Magi;" one only, from the catacombs of St. Agnes, being a distinct and abstract group in what might be called, the ideal presentment of this sacred theme, apart from historic particularities. The text to this work, in a different volume, is supplied by the able pen of Signor di Rossi; and the general conclusion we are led to is, that the place assigned to the Virgin Mother in the Church's primitive symbolism was subordinate to the historic circumstances of the various situations in which she is introduced to us by the evangelic writers, totally different therefore from that she occupies in Mediæval as well as modern art.

The draining of the Lake Celano, undertaken by Prince Torlonia for agricultural objects, is now so near to completion that only about one-fourth its body of water remains to be drawn off: the celebrated Emissary made under Claudius may now be penetrated in its entire length, though not without personal inconvenience; and a striking scene was presented when this tunnel was illuminated throughout on occasion of a visit to inspect the works from the minister of the newly-constituted Italian kingdom, Signor Peruzzi. Through the urgency of like utilitarian demands two other classic lakes, in the Roman Campagna, that of Gabii and the Regillus, have been caused to disappear, within recent years, to leave their dried beds for the growth of grain, their scenery deprived of its most impressive and historically important feature.

A German artist, of Munich, who has joined the Capuchin order, and is now an inmate of the S. Lorenzo convent, near Rome, has designed a church in the early Gothic style, to be erected shortly in the uninhabited region between S. Maria Maggiore and the Laterau: this will be served by the same friars, for whom a convent is to be raised on the spot; and as to the architecture, we may state that Fra Bernardo Teckel (its author) will be the first to set the example of a pure and nobly-conceived type conformable to the ideal of the Pointed style, and executed with consistency to that leading purpose in all details, not found in any church yet erected within the walls of Rome.* Besides being an able architect, he is also a painter, dedicated to the illustrating of sacred themes, and displaying in his several pieces, some in oils, some in water-colours or crayon, a poetic feeling combined with technical skill far from ordinary; remote, indeed, from all the characteristic qualities of the modern Roman school.

The exportation of art works, ancient and modern, from Rome, annually reported by the ministry of commerce and public works, was during the past year to an amount whose aggregate value we give as follows, from the official statement, in *scudi* and *bajocchi*:—Pictures, antique, 5,746*s.* 70*b.*; sculptures, antique, 1,648*s.* Pictures, modern, 116,427 *s.*; sculptures, modern, 23,130 *s.*

* We might except indeed, and point out as a meritorious novelty, amidst the poor common-places of sacred architecture in Rome, the small church built for the Redemptorist Fathers, a few years ago, from the designs of Mr. George Wigley.

MR. BRIGHT AND THE "TIMES" ON PATENT LAW.

Mr. Bright gave his opinion the other day upon patent law, as well as upon some other little matters. This late "extra-Parliamentary utterance" of the honurable member for Birmingham appears to us to afford an interesting study of human nature. Mr. Bright says that "he is not very much alarmed at the prospect of the total abolition of patents;" and that, indeed, he would rather like it than not. He feels greatly touched at the many inventors that are ruined by their inventions; and he believes that "not one in twenty of them makes his expenses," and that a good many out of the twenty are nearly ruined." However, he does not believe that a total abolition would be practicable, as there is no other possible mode of rewarding an inventor besides that of giving him a patent. Mr. Bright advises the adoption of the American system of examination, and the deposit of models showing the invention,—a plan also adopted in America.

Two forces appear to act upon Mr. Bright in the question of patent law. He is an extensive carpet manufacturer. We all know, as mechanics, that force cannot be created from nothing. The bursts of steam from under a safety-valve, that relieve surplus pressure on a boiler, must be paid for,—must consume coal. The prosaic fuel of Mr. Bright's last "extra-Parliamentary utterances" is the price he gets for carpets. Carpets, now-a-days, cannot be very cheaply made without looms. Carpet-looms are very complicated and ingenious machines. They thus give a wide field to the labours of ingenious machinists. No speeches, however eloquent, can force a clumsily-made loom to do its work cheaply and well. Mr. Bright's eloquence would have no effect on cranks and wheels. As Dr. Cumming's millennium is not yet come to pass, the ingenious machinists who devote their time and abilities to build and improve carpet-looms naturally require a certain amount of bread and beer. However philanthropically these inventors may feel, they find themselves obliged to take out patents for their inventions,—that is, a right to prosecute carpet-loom makers and carpet manufacturers who use their inventions without leave. Of course, this is very selfish on their part. Why should a manufacturer have to replace valuable old looms by new ones, if he wish to keep pace with competitors? Why should these innovators be continually making clean sweeps of factory arrangements? Let those selfish patent laws be done away with. Let us have Free Trade in ideas. Give me your improved looms for my eloquent speeches.

But now another force acts on Mr. Bright. This force is the continual attraction he feels towards the happy institutions of the model republic. He thus gazes across the Atlantic towards the land of the sowing machine and the reaping machine. "This won't do," he says. "Why, the Americans have a patent law. Let us, therefore, alter our patent law to their model." Mr. Bright's mind thus exemplifies the familiar mechanical problem of "the composition of forces:"—"If a body be acted upon by two forces, one of which would cause it to move from A to B in any given time, and the other would cause it to move from A to C in the same time; then if these forces act upon the body at one instant, it will move in neither of the lines A B, A C, but in the line A D, which is the diagonal of the parallelogram of which the two lines A B and A C are containing sides." In our little problem we may call A B = total abolition of the patent laws; A C = complete copy of the American law; A D = the resultant lately expressed by the honourable member for Birmingham.

But what are the sad experiences in patent law to which Mr. Bright alluded so pathetically the other day? We find, in the first place, that the Messrs. Bright have been accused of infringing two patents belonging to Mr. Crossley. The suit for the infringement of the patent granted

to William Wood (No. 12,937, A.D. 1850), for "improvements in the manufacture of carpets and other fabrics," has been lost by Mr. Crossley. Another suit for infringement of a patent granted to C. Crossley, G. Collier, and J. Hudson, A.D. 1850 (No. 13,267), has been pending about two years. Messrs. Sharp, Stewart, & Co., of the Atlas Works, Manchester, have also entered actions against the Messrs. Bright for infringements of two patents granted to Mr. William Weild, C.E. (the inventor of the spooling machine, so well-known to the visitors of the Western Annexe)—No. 505. A.D. 1855, and No. 267, A.D. 1857—both for improvements in carpet looms. Messrs. Bright allege that their looms are made on the patent of W. Moxon and J. Clayton (No. 791, A.D. 1857). All this of course shows great enterprise on the part of the Messrs. Bright. But bold, enterprising conduct is not all that we expect from people. Mr. Bright would like to have Free Trade in ideas. But is he the right advocate? What would the world say of a man who, after having been four times brought up before the late lamented Sir Cresswell Cresswell for an undue amount of attention to the ladies of his acquaintance, should now propose an abolition of the Divorce Court?

Our leading journal, the *Times*, which differs from Mr. Bright in almost everything except in a hankering after an abolition of Patent Law, on Saturday last devoted a leader to patting Mr. Bright on the back for his last feat. Mr. Bright, who also differs from the *Times* in everything, even as to the way in which its esteemed editor spends his evenings, has thus found one unexpected ally. No one can deny the power and abilities of either the *Times* or of Mr. Bright. We do not believe, as the *Times* occasionally appears to believe, that Mr. Bright is a dangerous demagogue. But we do believe that his "extra-parliamentary utterances" are not to be accepted as either competent or disinterested evidence in the question of patent law. Mr. Bright is a manufacturer, and not an inventor; he is, therefore, a consumer and not a producer of inventions. One party wishes to use a new plan for nothing, and the other to get cash as well as fame for his time and trouble. We have here two interests directly opposed to each other. With regard to the *Times*, we can say sincerely that, like the majority of Englishmen, we are proud of it, and believe the country can never sufficiently remember the services it has rendered, and continually renders. But in technical matters, the *Times* is not *always* correctly advised, to our thinking. And the question of patent law or no patent law, is a technical question—a question to be settled by engineers, by chemists, by inventors generally, and not by barristers, however clever, or by writers, however elegant. The *Times* and its writers see in London only one side of the patent law. The litigated cases brought to London form a kind of museum of morbid patent anatomy. Let anyone travel in the manufacturing districts, and see the number of men whose rise in life dates from a successful patent; the number of new manufactures that have grown up under the fostering influence of the patent law, and a different view is taken.

As to the right of a man's requiring remuneration for a new invention, we consider that it is out of the pale of discussion, and we hold that a man has as much right to his own idea as to the shirt on his back; very often more. That the present state of the law is attended with great grievances to inventors and the public generally there can be no doubt. Whether these grievances can be easily remedied is another question. Mr. Bright and the *Times* complain that patents are now granted for frivolous inventions. "In my opinion," said Mr. Bright, "patents are granted in many cases for very insignificant things, and they are nothing but a nuisance to the trade with which they are connected. Frequently the improvements are so trifling, almost so childish, that it is quite absurd to give a man a monopoly which may be the cause of harassing every extension in manufacturing operations."

It is difficult to conceive that a "childish," "trifling" thing can be such a powerful means of annoyance. At any rate, the supposed "trifle" does not seem to have been so obvious as to have occurred to several at once. What is a "trifle" in any art? Michelangelo often said that perfection consisted in trifles. After burning coke for thirty years in our locomotive fire-boxes we now burn unprepared coal. We now prevent the smoke by means of a "trifling" baffle-plate to the fire-box door, and a fire-brick arch in the fire-box. Our thrashing-machines used to break the grain, until an observant man made the trifling addition of a few oblique grooves to the beater. It seems a very trifling thing to taper the blades of a fan, but much power is saved by this "trifling" expedient. All the modern improvements in gunnery are based upon the simple substitution of a conical for a spherical bullet. Upon such "trifling" things depends the success or failure of any machine. If utility be thus measured by size, the previous examination proposed by Mr. Bright, "for the purpose of ascertaining whether the invention is worth a patent," will be no easy task. The composition of such a board of examiners will be no easy thing. It would be difficult to find a jury perfectly free from any interest for or against any particular patent.

If the question were to be left to lawyers alone, it would be merely a change from one bad system to another. The question of utility must be entirely placed out of the reach of any board. They would find enough to do in merely considering the question of novelty. The adoption of the American system of a board of examiners appears, however, the only way of getting out of the present difficulties of the law.

A patent can now be taken over and over again for the same invention. For one man, or even several men, it is almost physically impossible to investigate the soundness of his patent as to novelty. At any rate, the task could not be finished within less than a five or six weeks' constant search. The present system is thus a fraud upon the inventor. A patent right is in substance the right of setting in motion the machinery of the law against infringers. A patent thus wrongly given is evidently a fraud on the public. If the present price of a patent be reduced, models could with justice be required from inventors; but a professional man, who ought to be able to read a drawing, does not require a model. As to patent litigation, the number of cases may be reduced by the success of such a patent commission; but all law is an expensive luxury in England. Patent litigation must always be expensive from its special character, requiring special barristers at the bar, and experts in the witness-box.

If Mr. Bright's remarks on patents have at least the effect of quickening the movements of the Patent Commission now sitting—the majority of whom, by the way, are lawyers—he will have deserved our thanks.

ARCHITECTURAL LONDON IN 1884.

THE possible aspect of London as it might appear to the problematic New Zealander, in that far-off future in which civilization and commercial prosperity may have been displaced from their present centre and removed to the antipodes, has been traced by a master hand. But that dreamy picture of architectural ruin belongs to a state of things too distant, and too inconceivable to create any really serious interest in the present generation, or to materially influence the studies or aspirations of our existing architects and engineers.

It may, however, prove more suggestive to sketch out a pen-and-ink picture of architectural London at no more distant epoch than twenty years hence—a picture, the outlines of which are already making themselves visible, and which cannot fail to flatter our national vanity, instead of suggesting the depressing idea of a London in ruins, in the far-off New Zealandic epoch—should such an era ever arrive, which, in the present state of Maori progress and politics, seems less and less probable.

At a period not more distant than the year of grace 1884, it may be fairly assumed that the architecture of London will have assumed an artistic character as far in advance of its present aspect as its present is from that of the year of those famous treaties and conventions of 1815, which were thought to have settled everything, both political and artistic, upon a permanent basis, while passing events are every day proving to us that they settled neither the one nor the other. At that epoch (1815), scarcely more than fifty years ago, the vast dingy mass of old brick-and-mortar London, with its mean, low houses, crushed with their cumbrous tiled roofs, and unenlivened by their small, badly glazed, and insufficient windows,—half of which were built up to avoid William Pitt's too celebrated window-tax—was still intact.

In the north-west, it is true, Portland-place and a few squares, and wider streets, containing more spacious and better-lighted houses, had been gradually making their appearance during three quarters of a century; but the metropolitan agglomeration of crowded and dismal buildings, and narrow streets and alleys, which formed the main portions even of the aristocratic parishes of St. James and St. George, still enjoyed all their ancient prestige of density, dirt, and dinginess. And then they were so blackened by successive coatings of the coal smoke of centuries, that whether they were themselves built of coal instead of brick might have been a point open to discussion.

It was only about the year 1815, that it was determined to cut a broad roadway through the murky centre of a mass of streets and alleys, which then disappeared for ever from the map of London, in order to form a grand new street, considerably above a mile in length, leading from Carlton House, the residence of the Prince Regent, to the newly-formed park, which was to take its name from the then existing Regency.

The new line of communication arising on the sites of Glasshouse-street, Swallow-street, and a host of smaller streets and alleys, became gradually the Regent-street of to-day; and being commenced soon after our great military triumph at Waterloo, the broad opening opposite Carlton House received the name of Waterloo-place; the whole forming what may be termed our "Boulevard Sebastopol" of that time. So thoroughly established now is that Regent-street as the leading feature of the street architecture of western London, that it is difficult to conceive an "architectural London" without it; the fact being, that before that time there was, in the matter of streets, no architectural London at all. The effect produced by the designs of Mr. Nash was considered very great among the more advanced critics of that day, and they were, doubtless, an immense advance upon the artistic state of things in the matter of street architecture which he found generally prevailing at the time. The style has since been mercilessly criticized, and it is certainly true that the conventional addition of parasitic columns, and the creation of sham façades of imposing extent, produced by swamping the individuality of half a dozen or more houses, in order to make them form (in external aspect) a single building, was not a very lofty kind of art; but the plan, such as it was, was fairly carried out, in its own fashion, and completely answered its temporary purpose (a very important one), that of demonstrating the advantage and necessity of wide thoroughfares, and more ornamental buildings, even for a street of shops. Nevertheless, John Bull, in his good honest conservatism, scoffed a good deal at the wholesale innovation. The good public of the time did not take kindly to the "Roman cement" and other "extravagant" and "new-fangled things," about the great new street. Those new things, however, in this fast-moving age, have already become obsolete—and already is the great new street of the Regency doomed to speedy demolition. Steam and railways have made our architects, and even our general public, acquainted with the architectural splendours of the Continent, and with the taste acquired by their study the real short-comings of the Regent-street style of architecture have become very plainly apparent. The yards upon yards of Mr. Nash's Corinthian and Ionic façades of stucco, which even at the time of their erection were ridiculed as the *Nash*ional style, are no longer found satisfactory, and are silently, but surely, doomed to early destruction. The first blow was struck some years ago, when the Club Chambers were built, in Waterloo-place; but the public mind had then just begun to get accustomed to the architecture of the Regency, and the dwarfish height of the buildings in regard to the great width of the street had not been as yet much remarked, and, therefore, great was the outcry against the "ugly monster of a building" which utterly dwarfed its neighbours, and reduced to pigmy dimensions the adjoining chapel, which is, in fact, a pretty little structure enough. The removal of the cast-iron colonnade of the Quadrant, after a considerable interval, was the next serious blow—a very serious one, indeed, as it removed at one fell swoop the most original feature of the entire street. But now has commenced the promiscuous onslaught upon individual houses in good earnest. The restaurant at the corner of Burlington-street has just been entirely rebuilt, and the new structure, of course, far overtops all the neighbouring houses; exhibiting in its design a fair amount of most of the approved features of our street architecture of the present day. Most important among these

new features is the construction of additional stories. The *quatrièmes* and *cinquièmes* of Parisian houses, which but recently we ridiculed with considerable hilarity, have now become indispensable in our own ordinary dwellings. Indeed, when we reflect upon the scanty supply of sleeping apartments which it was usual to construct in an ordinary London house of the annual value of from 80*l.* to 120*l.* a year, at the time that Regent-street was built, and which scarcely ever exceeded in number two principal bedrooms and three or four attics, it becomes difficult to conceive how the last generation bestowed themselves in their sleeping arrangements. At all events, it may be asserted that our present ideas on the subject render increased accommodation in this respect absolutely necessary. And so, as it is evident that we cannot spread out our ordinary dwellings laterally, on account of the high value of building ground, we are necessarily driven to the extension of the building upwards. This has now become a fixed principle with our builders, and all private residences in the endless new streets, terraces, and squares of Belgravia, Tyburnia, and Westbournia, are provided with extra floors of bed-rooms; thus affording sleeping accommodation more in accordance with our present ideas of comfort, propriety, and health. The external architecture is made to agree (more or less) with the increased importance imparted to the building by its superior height; and thus it is that the new house in Regent-street has been made to overtop all its fellows, while the rising Langham Hotel will soon afford a far more striking example of a similar tendency in our modern street architecture. In short, it may be safely asserted that, within the next twenty years, a new Regent-street will have arisen, which will creditably sustain comparison with the famous buildings of the new Parisian boulevards, or even the line of palaces of the Roman Corso, or the most beautiful of the marble dwellings of Florence "the elegant," or Genoa "the superb."

We shall have no more of rolling out eight or ten houses into one sham façade; but in its stead, that charming individuality of architectural effect which we have so often admired as distinguishing each separate house in the fine old cities of Belgium and Germany, belonging to the great periods of Flemish and German art. In many of the finest specimens of those noble old houses, each dwelling presents us with as marked an individuality of character as its inhabitants. Each doorway, which may be called the mouth of the architectural face, smiles on the approaching visitor, after its own peculiar fashion; its crisply decorative foliage of stone or marble, seeming, in its playful exuberance, to break into actual words of welcome, symbolized by fruits or flowers cast forth, as it were, in our path. And then these symbols of welcome are generally blended, by the ingenious fancy of the designer, with characteristic implements or emblems connected with the calling or profession of the occupier. Next come the windows—seeming the glistening eyes of the architectural physiognomy,—and they beam on the passers by, each with its own peculiar and delicately different expression — sometimes open and brilliant, where the framing is broad or lofty, as looking forth from lids widely and fearlessly raised: while from other window-eyes of the architectural face a somewhat languishing though not the less pleasing glance steals softly towards us, as though from gracefully drooping lids, formed by a more than usually depressed curve of the superincumbent wreath or label. Then comes the gable, the forehead of the edifice—now high and bold—now soft and low each wearing its own peculiar coronal, its jewels or flowers peculiar to itself—jewels of stone or marble, made more precious than those of the *soi-disant* precious metals by the skilful hand of the carver. All this and more we shall see exemplified in the houses of our streets within the next twenty years, instead of the poor, low, characterless fronts and unmeaning length of sham façades of factitious Corinthian or Ionic that exist in our present Regent-street. It is true, that in so far as Regent-street is concerned, great impediments to change exist. The ground is Crown property, held under leases drawn up by Crown lawyers, and, of course, stuffed cram full of clauses intended to form insurmountable barriers to alterations or improvements of any kind. One would be induced to imagine that the high authorities in whose departments such business is transacted would be disposed to facilitate such arrangements as might render costly improvements more practicable; but such is not found to be the case. A recent philosophic investigator of such matters, Professor Charles Dickens, has discovered the cabalistic principle on which questions connected with public improvements are manipulated in those quarters. It is the principle of "how not to do it"—in face of which motive power, possessing, as it does, a powerful double-backward action, it is found exceedingly difficult to get forward. Nevertheless, and in spite of all the battling of the Partingtonian broom, the tide of improvement has sternly set in, and will inevitably sweep away Regent-street, notwithstanding all the bindingest of clauses in the most stringent of crown leases.

Next, and which ought to have come first, let us consider the architectural prospects of the banks of the Thames, that Thames to which London itself owes its existence. Within the time specified, its present filthy state will have been thoroughly purified, and the wretched agglomeration of inferior and squalid buildings on its shores will have given place to a noble series of spacious quays, which we may fairly hope to see embellished with a series of public and private edifices worthy of the name of architecture. We may also safely conclude that the present ideas of purification will have assumed a so much higher standard by that time, that a vast stream of perfectly clear water will be constantly flowing in unimpaired beauty through the heart of the metropolis, receiving at the same time a great additional interest from the fact, that many kinds of fish, such as are not driven away by the mere activity of the steamboat traffic, will flourish abundantly and greatly multiply in its limpid waters.

In order, however, that the vast plans of the Thames Embankment may be fitly carried out to their ultimate results, the public must inform itself more fully on the subject. If all that vast avenue of murky warehouses and dark cellars, varied by intermediate spaces of black mud, are really to be swept clean away, and we are to get in their places an *unbroken* line of spacious quays, with all their concomitant features of broad and noble stairways, and balustraded parapets, while the land side of the wide roadway MAY become bordered by a series of stately buildings, —the public must make itself thoroughly acquainted with the plans actually in progress, the grasp and splendour of which will necessarily expand as the public becomes aware of what is really being done, and applies its sturdy shoulder to the somewhat sluggish chariot of official progress.

How much stimulation from the power of "pressure from without" is required to ensure a perfect carrying out of the plans, as yet but vaguely indicated, may be inferred from the course of events, during which the cold shadow of official inertness so long rendered abortive all the plans for a Thames embankment which had from time to time been pressed upon successive Governments for the last forty years. There was Col. French's complete and elegant plan, in which full advantage was taken of all existing public buildings, such as the river front of Somerset House, &c. Beautifully illustrated plans of the effect of the proposed quays were published at the time by their spirited projector; but all was of no avail. Then there was the bolder and more comprehensive plan of John Martin, the painter of "Belshazzar's Feast," which included a vast plan of metropolitan drainage without polluting the Thames. But the long effective official principle of "how not to do it" successfully swamped both these and many other plans. The stimulations that eventually forced the How-not-to-do-its to reverse the power of their celebrated official engine were of a somewhat irresistible character. Nothing less than three destructive visitations of a fearful pestilence, combined with the utter obstruction of the increased traffic in the old thoroughfares, and at the same time such indications of general public opinion as rendered further opposition something more than unadvisable. Under this unusual pressure the "How-not-to-do-it" principle broke down; and, therefore, now that the narrow end of the wedge is at last got into the question, the public must see that it be fairly driven home. It must see that the proposed quays be of sufficient spaciousness, and of *unbroken* continuity;* and that the noble sites for public and private edifices be not jobbed away, as other important sites have been before.* With due vigilance, we have now a chance of seeing, within the next twenty years, such a line of river quays, bordered by such a line of stately buildings, as shall not be matched in the world; in presence of which the boasted Parisian quays of the Seine will sink into comparative insignificance.

The projected new bridges form another interesting subject for architectural consideration. The projected and already commenced new bridge at Blackfriars will be a very remarkable structure. The effects of natural colour, if the smoke be not found to reduce them to one dingy monotone,† will be very striking, resulting, as they are intended to do, from the use of red and blue granite, relieved by richly-sculptured features of white Portland stone. The whole design of this bridge is of very original character, and its only drawback is the iron portion, which, as we at present understand its use, does not seem to amalgamate in effect with the stone and granite. But the most important considerations on the question of the new bridges are those connected with the rapid extension of the Metropolitan railway system. We are, in fact, threatened with too many bridges of that description, insomuch that the aspect of our noble river may be materially interfered with. Much, however, may be done to palliate this objection by such stringent clauses in Metropolitan Railway Acts as shall compel the erection of really fine structures when the lines of rail have to be carried across the Thames. Moreover, in order not to obstruct, more than necessary, the general view of the river from the projected quays, two or more such bridges might be combined in one structure. For instance, the rebuilding of the bridge at Blackfriars *might* have been combined with the proposed railway bridge of the Chatham and Dover line. That part of the new Blackfriars Bridge facing west might be set apart for a carriageway only; while the central portion might be occupied by the railway line, erected of course at the company's expense; the eastern portion being devoted to a separate footway. The raised enclosure, roofing in the railway portion of the structure occupying the central part should be made as splendid as possible, and the ridge or ridges of the roof should present a richly-decorated sky-line, broken at three or four points by lantern-like pinnacles, serving at once to light and ventilate the bridge tunnel, and, at the same time, to enrich the general structure. Such a combination might be made to form one of the most splendid and original examples of bridge architecture ever attempted; blended, as it would be, into a colossal and magnificent piece of architectural construction such as our architect-engineers have never yet accomplished or attempted,—a monument of an entirely new class, originating, as it should do, in England, the undisputed parent of the railway system.

As one of the collateral results of the realization of the projected line of quays, the alterations and improvements in the old lines of traffic which will necessarily occur should be next considered. It was the choking up of the old narrow thoroughfare of the Strand, Fleet-street, and Cheapside, by the demands of a vastly-increased traffic, that in part forced on the great embankment and quay system. In fact, the immense crowd of vehicles, often brought to a stand for hours by the continually increasing numbers of enormous railway-vans, had at last conferred upon that line of thoroughfare the name of the "Vandemonium,"—forming, sometimes, a general impediment three miles in length, which vehicles bound for other parts of the metropolis were effectually prevented from crossing. The creation of the new quays, and of the new Southwark line of streets, will not only decrease the amount of Strand traffic, but it will do so to such an extent as seriously to depreciate, for a time, the value of the house property along the whole line. This state of things will compel the owners to resort to measures which shall renew to the old thoroughfare, by means of attractiveness, all it will have lost by ceasing to be the only line, or at all events, chief line, of communication between east and west. With this view, the roadway will be widened by entirely taking down

* Already the Charing-cross Railway Station has been allowed to create an impediment which it is difficult to see the way through; and the gasworks business at Blackfriars is another difficulty of the Board's own creation.

* The Act limits the operation to creating the roadway mainly out of the present river space, so forming frontages for the proprietors of land now bordering the water, which, without potent supervision, may be greatly abused. An additional Act for this purpose is imperatively required.

† The artificial colouring of Westminster Bridge is already rendered nearly undistinguishable by smoke, while scarcely more than a year old.

the houses on the north, the least frequented side, and rebuilding them farther back, on the land, of comparatively small value, in the rear. An Act of Parliament for such an indisputable metropolitan improvement would be easily obtained; and the houses there rebuilt would necessarily be of a spacious and magnificent character, because buildings of that class would "pay" best. The whole suggested improvement would, in fact, be carried out by the proprietors, or a company, not because of its public utility, or because it would be a great metropolitan improvement, but because it would pay. It might be found that the houses on the south, or river side, would be the most easy to remove, in which case we may imagine them re-appearing on a highly magnified scale, nearly as far back as the line of frontage indicated by the grand façade of the new Charing-cross Railway-station and Hotel. What an architectural vista we should then possess—terminated at its first stretch by the churches of St. Clement-Danes and St. Mary-le-Strand. Beyond this point the widening process would necessarily continue along Fleet-street and up Ludgate-hill. The new structures in this part of the line would be of a palatial character, as may already be plainly foreseen by the style of the buildings which are yearly replacing the old houses of the Strand, Fleet-street, Cheapside, and Cornhill. Thus will this great ancient artery of the metropolis regain its former importance and dignity, and form a grand central thoroughfare consisting of a long avenue of important buildings, each realizing in a greater or less degree the interesting individuality of character previously alluded to. The dingy old monotonous brick is, indeed, already fast disappearing, to be replaced by handsomer structures, not of the sham stucco, like Regent-street, but buildings of real stone, enriched with inlays or columns of polished granite, marble, or terra-cotta, and decorated with real sculpture of great artistic merit, and of suitable character, as to its symbols, foliated decorations, or statuary. That this will be the case we may infer from the Music Hall, now advancing towards completion, in the Strand; in the façade of which well-sculptured busts of the greatest musicians, and other appropriate emblems, enter into the composition, which, notwithstanding many drawbacks, is really a very striking one.

To return to the commencement of the great Strand line. It may be taken for granted that the shabby houses forming the only remaining side of Cockspur-street will, in twenty years, have entirely disappeared, and have been replaced by edifices worthy to form the south side of Trafalgar-square. The new south side will probably be then made to run due east and west, so as nearly to complete the quadrangle, leaving at the south-west corner an open space for a pair of magnificent gates forming a Spring-garden entrance to St. James's Park. On the north side of Trafalgar-square the present National Gallery will be improved by the erection of an additional story, enriched with columns, after the manner of the "Garde Meubles," of the Place de la Concorde; or an entirely new and more magnificent building will arise, really worthy of the name of a "British National Gallery," which will occupy the entire space of the barracks in the rear, making the building form itself into a noble quadrangle, equal in every respect to that of the new portion of the Louvre. Of Pall-mall and Parliament-street we reserve our remarks for a future occasion.

The northern, and the new southern approaches, from the west to the City, next invite consideration. Of the new and convenient southern roadway, on the Southwark side of the river, it only need be remarked that the roadway itself is now complete; that a double line of handsome houses cannot fail to spring up very rapidly in a thoroughfare that must become a most important one; and that the opening of this new line of street has already greatly eased the pressure of the traffic along the old line of road to the London Bridge Railway Stations. The northern line, that of Holborn, has a more remarkable future in store for it. A greater part of the line (allowing the impedimental Middle-row to have already disappeared) is of noble width; and when some strong stimulus shall have been applied which will induce proprietors to replace the present houses by a superior class of structures, it will at once assume an importance which it has never enjoyed before. The creation of New Oxford-street was the first instalment towards the creation of an entirely new era for the Holborn line; but a far more important improvement is now about to be immediately realized in the construction of the great Holborn-valley viaduct, which will bridge over the ancient valley of the Fleet ditch, and at once put an end to that severe hill work, both on the Holborn and Skinner-street side, which has so long been the dread of both horses and drivers, and ruinously destructive, in the form of severe wear and tear, to vehicles of all classes.

The viaduct, as now proposed to be carried out (by means of the City's share in the coal duties), is one of the largest undertakings* that was ever projected for the improvement of a metropolis. The improvement will, in fact, consist of the utterly pulling down and rebuilding of a mass of habitations equal in extent to a moderate-sized county town. That is to say, nearly the whole of the buildings on both sides of Holborn-hill all the way from Hatton-garden to Farringdon-street, and those on both sides of Skinner-street from Farringdon-street to Newgate-street, with many others, will have to be taken down. The viaduct itself will be constructed at such an elevation as will make the continuous roadway nearly a dead level from the high ground at Furnival's Inn to the corresponding height in the neighbourhood of Newgate.

The ground on either side will be leased for building shops and houses of a superior description; and if the character of the viaduct itself, and the new buildings connected with it, be at all equal to that of the elevations shown in the designs sent in by several of the competitors, this new portion of the great northern artery of metropolitan communication between the west end and the City may be made to form one of the most remarkable objects in the street architecture of Europe. This stimulus given to the architecture of Holborn will doubtless spread epidemically along Oxford-street, and in the twenty years specified nearly the whole of the low and mean buildings which still remain in that important thoroughfare will have been replaced by others fully equal to those which we shall doubtless see occupying the whole of the Strand and Holborn lines.

Not only the great changes referred to, but many others of scarcely secondary importance, will have taken place within the time specified; and our young architects, who are yearly becoming more original in the treatment of their works, and are shaking themselves more and more free from the enervating coils of that slavish imitation into which the beauties of Mediæval monuments had seduced them, will embellish street after street with lines of noble houses, each of which will be, in every sense of the word, an architectural study. And not only will the dingy old brick and the unartistic stucco be abandoned in favour of stone, marble, and granite, and also of superior classes of washable bricks of different tones of colour, accompanied by terra-cotta ornaments of superior character, which will have come into general use; but other materials, which are also destined to play a conspicuous part in the London architecture of the future, will by that time have been called into requisition. Of the character of these new materials we should like to say a few words, but want of space precludes the possibility of doing so on the present occasion.

In conclusion, it may be stated, that whether such wholesale and sweeping alterations be to the taste of the great mass of the public or not, they will most certainly take place within the next quarter of a century; or, in their stead, something equally extensive and very much of the same character. Those, for instance, who are lamenting the contemplated destruction of some of the beauties of Finsbury, to make way for railway stations, will have to submit to their hard fate; for these and more wholesale changes than can yet be conceived will inevitably take place. The only thing to be guarded against is, not to allow *open spaces* to be filled up, rather make more, for such breathing spaces form the very lungs of the metropolis. Another thing is, for the future, to prevent positive disfigurements, such as the threatened one at Ludgate-hill, the injuriousness of which will probably be reduced by a rider to the bill, early in the coming session. In the main the metropolitan railways will lead to many opportunities for architectural embellishment; and if the companies are restrained from stretching great ugly iron boxes across roadways, in conspicuous situations, like the tubular viaduct at Vauxhall, we shall get good instead of evil out of all their proceedings; especially if in passing the Thames they can be made to go under it instead of over it. On the whole, it may be safely asserted (without referring to our new churches, or our great joint-stock hotels, or new public buildings), that a splendid architectural future is in store for London, and that the remark of the Roman orator, that Augustus found a Rome of brick, and left one of marble, may yet be fitly repeated in regard to London in the reign of Victoria, if our sovereign should be blessed with that length of days which is heartily desired by all her subjects.

* Of course putting out of the question the structure of main sewers,—from the vast structures which are still the wonder of subterranean Rome, to the great London drainage scheme of the present day.

THE VIOLIN, OR VIOL, IN ECCLESIASTICAL AND OTHER SCULPTURES.

An instrument more capable of discoursing "celestial music" than the modern violin perhaps does not exist; but in unskilful hands not even the bag-pipe can excel it in diabolical, screeching, and nerve-lacerating harshness. Whether it was from its celestial or from its diabolical capabilities, or both, that the rote or crowd, the viol, fyvele, or fythele, or other ancient form of instruments of the violin class, came to be sculptured, as the bagpipe itself was, on our ancient churches, it may now be hard to say: assuredly we must not take it for granted that because it was ecclesiastically used, therefore it must have been regarded as exclusively a celestial and not also a diabolical symbol, for we have the devil himself not seldom "holding his own" place in such sculptures; and, indeed, it is fitting, in the nature of things, that the field of battle for the Evil Spirit should be precisely that on which the Good Spirit is at work; and probably this is the reason why devils, satyrical and diabolical faces, and other symbols of horror, should have been sculptured, as well as cherubim and angels, on our sacred edifices.

Whether the ancient viol ever really yielded anything like celestial strains, therefore, we cannot ascertain from the mere fact that it was symbolically used in edifices devoted to the Divine service. But no one who ever heard Paganini play on his one-stringed violin can doubt the *possibility* at least of even the ancient viol having been capable, in skilful hands, of yielding really excellent music, relatively inferior and imperfect though it was, by comparison with the modern violin.

In an interesting article in the *Builder* on "The Build and History of the Violin," by the late Mr. A. F. Ashton, architect, an able musical critic and writer on art generally, as our readers will remember, the author remarks that "an elaborate work on the violin is much wanted; but so nice is the subject, so fine the thread upon which excellence depends; that it is extremely difficult to describe the rules for obtaining it; and, like that of the Freemasons, 'the secret' is likely to be confined to the craft." Whether the new work which we are about to make use of in gleaning a few particulars as to the viol in ecclesiastical sculptures (referring our readers to the article in the *Builder* of 4th August, 1855, for historical and other details as to the instrument under its various forms and names) be up to the mark desired, we shall not decide; but at least its authors may be said to belong to the craft as amateurs and something more, who for many years have been collecting materials for such a work as that under notice,* which, however, they modestly characterize, in their preface, as "Collections towards the history of the Violin" rather than the history itself. Mr. Forster appears to be a descendant of the celebrated violin-makers of that name; and the work is by permission dedicated to the aristocratic "Bohemians" well known as "The Wandering Minstrels."

The crwth, or crowd, an ancient form of the violin or viol, was of early date in England, Wales, and Scotland; and an instrument of this nature was among the ornaments on the outside of Melrose Abbey, founded in 1136. There are some curious representations of the viol and other instruments painted on the interior of the roof of Peterborough Cathedral, called of the date 1194, or a little earlier, when the work was completed by Abbot Benedict, who presided from 1177 to 1194. The ceiling was retouched a little previous to 1788, and repaired in 1835; but great care, it is said, was taken to retain every part, or restore it to its original state, so that

* The History of the Violin and other Instruments played [on with the Bow. By William Sandys, F.S.A., and Simon A. Forster. London: J. R. Smith, Soho-square. 1864.

the figures, even where retouched, are in effect the same as when first painted. One is a grotesque figure, playing on a viol with three strings and four sound-holes; the general make of the instrument very much resembling the modern form of the violin, and the bow also like that now in use. The figure is represented not only as playing, in the usual way, with the viol held to the left shoulder, but evidently also, as we think, both dancing and singing, as well as playing. Another is a crowned figure, with a viol having two sound-holes quite like those of the modern violin, and played much as usual; and a third is a woman with the viol on her lap and a very doubtful-looking bow across it: the neck of this instrument is bent at right angles. Each figure on the roof is placed in a separate lozenge-shaped ornamental compartment, differing occasionally in the style of ornament and in the colour of the ground. The instruments have even inward curvatures at the sides like the modern violin, and there is an appearance of finger-boards and tail-pieces, though none of bridges. On this roof, we may remark, by the way, there is a curious representation of an ass playing on the harp, which may have some reference to the singular celebration of "the Feast of the Ass," wherein part of the service was called "*Asinus ad Lyram*;" but it would fill an article in itself to give even a slight idea of this curious subject and of the numerous varieties of "the Feast of Fools." In "Monnaies des Fous," &c., mention is made of the figure of an ass on the old tower of Chartres, playing on a stringed instrument, which, from the account given, appears to be more like a harp than the vielle, but the figure had the name of "L'Âne qui vielle."

The viol may frequently be found in the sculptures on our cathedrals and old churches. Carter, in his "Ancient Sculpture," has given some representations of the viol from Ely Cathedral, of the early part of the fourteenth century. One appears to have five strings and a tail-piece, but with no appearance of bridge or sound-holes; the other has more the form of the rebec, without inward curvatures. The screen in York Cathedral, separating the nave from the choir, has numerous figures of angels (no doubt celestial, and not infernal ones), playing on musical instruments, and the viol among them. In Exeter Cathedral there is a small fabric of stone projecting from the north wall of the nave, of date about the middle of the fourteenth century, and called the minstrels'. gallery. The front is supported by thirteen pillars, dividing it into twelve niches, each containing an angel, playing on a musical instrument, and among these also is the viol. It is still the custom for the choristers to go to this gallery on Christmas-day, and sing a hymn. Carter represents the figure of an angel on the lower tier of the screen at the west front of this cathedral, playing on a pear-shaped viol. Minstrel galleries, with figures playing on musical instruments, are likewise mentioned at the cathedrals of Winchester, Lincoln, and Worcester. Carter gives the figure of an angel playing a crwth or crowd in Worcester Cathedral, of about the twelfth century, under part of the seats of the choir: it resembles a viol without a neck. Dibdin, in his "Bibliographical Tour," gives engravings of what he calls "Drolleries at Strasbourgh Cathedral," of about the date 1370. One of these grotesque figures is playing on a sort of pear-shaped viol. On the minstrel's pillar, at St. Mary's Church, Beverley, of the time of Henry VI., one of the five figures is playing on a viol, of oblong shape; and in the same church are several figures playing on musical instruments, and among them an angel with a long oval-shaped viol, and another with a large or tenor viol.

Instruments played with the bow do not appear to have been numerous on the Continent before the eleventh century, but they increased in number and variety towards the middle of that century. The form at first was conical or pear-shaped, having the body and neck formed of one piece; but it soon assumed a more oval shape, with neck and body separate. There is said to be a representation of an ancient French king in the Church of Notre Dame, with a bow in one hand and a viol in the other, of about the last date; but there is some doubt whether this be Chilperic or Robert, who commenced the building in the tenth century: Montfaucon says it was the former. There is a curious figure of a performer on the viol on a medallion of the eleventh century at Boscherville: he holds it under the chin, and seems to be singing as well as playing. Among the figures on a capital at Boscherville, of the twelfth century, one is playing on an oval instrument like a viol; but M. de Coussemaker, in his account of ancient instruments, considers it to be a gigue. A crowd or crwth, at Amiens Cathedral, of the thirteenth century, is described by Coussemaker: it is like a viol without a neck, the strings being managed through a hole at the lower end. The same author mentions a viol, of the twelfth century, on a window at the Royal Chapel of St. Denis. There is also a grotesque and horned figure, like the devil himself, but called, by Coussemaker, Neptune, who is playing on a viol with a trifoiled head. In the left hand of one of the elders in Amiens Cathedral is an oval-shaped viol, with two sound-holes and three strings, like that in the horned figure's hand just noticed. Among the sculptures at what is called the Musician's House, at Rheims, of the thirteenth century, there is a figure playing on a three-stringed oval-shaped instrument with two ear-shaped sound-holes. The bow is of iron, and of light construction, almost as if it were an addition of modern date. Oval two-stringed viols appear in the hands of two female figures on an antique enamelled basin found near Soissons, said by Burney to be of the ninth century, but now considered to be of thirteenth, and described both by Potier and Coussemaker.

The pear-shape appears to have been the more ancient form of the viol. It afterwards became more oval, and subsequently the inward curvatures, more or less defined, were introduced, in order to facilitate the use of the bow; and the instrument in time became much in form like the modern violin, though of heavier make: this, however, was only after the lapse of centuries. Before the inward curvatures were introduced, the rounded sides must have interfered with anything like execution, and checked the action of the bow, which, it would appear, from the form of some of these instruments, must have struck several strings at once. Frets were introduced after the inward curvatures, to guide the fingers. The strings varied from one to six, sometimes, but rarely, even many more. At first, there was no detached finger-board, but the neck was an elongation of the body of the instrument: the sound-holes were generally two; but there are examples of four. There was, though not always, a bridge, varying in size and position, and usually a tailpiece.

The earliest representation which Messrs. Sandys and Forster have been able to find, is that in the learned work of Gerbert, "De Cantu," &c., plate 32, taken from a M.S. supposed to be of the eighth or ninth century, and called "Lyra." It is pear-shaped and one-stringed, with neck, bridge, tailpiece, and sound-holes, and the bow is not very different in general appearance from the modern one.

The approach to the present shape of the violin was probably gradual; the first makers of violins being also makers of viols.

The violin proper was known in England some years before it became the favourite in "good society;" and although we find it in the hand of Queen Elizabeth, yet it was generally associated with wakes, revels, and other noisy merry-makings; but on Charles II. introducing his band of "four-and-twenty fiddlers all in a row," the instrument rose in estimation, much to the annoyance and grief of the author of "Musick's Monument," that the noble and brave lute, also the majestic theorbo, should be "overtop'd with squaling, scoulding fiddles."

The volume under notice contains a great deal of matter relating to the history of celebrated makers of violins, besides a fund of anecdote connected with this and other instruments; and although the whole might be arranged better, it is full of interesting and curious reading. The matter is well illustrated by engravings of the various forms of the instrument treated of.

THE VESTRY DOOR IN THE CHURCH OF ST. NICHOLAS, HAMBURG.

The church of St. Nicholas, Hamburg, was begun from the designs of Mr. G. G. Scott shortly after the great fire of 1842, but it was not until last autumn that the internal works were sufficiently advanced to allow of the consecration taking place. Even now the internal arrangements, especially the carvings, are far from actual completion, as the original costs were very much exceeded and the parish funds were impoverished. The church (which, as our readers know, is Gothic), is cruciform, with side aisles and transepts, has a lantern at the intersection of the ridges, and will ultimately have a tower and lofty spire at the west end. The altar, font, &c., are formed of various marbles, and were sent out from England; whilst the pews, which are open, are partly of oak, richly carved; partly of deal, stained and varnished. At the angle formed by the chancel and south transept is the vestry, the door of which has just been put up, and is, from what we hear, a masterpiece of its own kind.

It was presented to the church by Mr. Plambeck; and his brother, Mr. C. F. H. Plambeck, has been constantly occupied at its completion during the last *three years*. The door is of oak, 8 feet 10 inches high by 3 feet 8 inches wide, and is divided into one large oblong panel, with four smaller square panels over and under. These panels are covered at the back with foliage, the leaves and flowers being executed in parquetry of light and dark oak; but it is the other side (facing the chancel) which calls for the greatest notice.

The middle or large panel contains a picture representing "The Lord's Supper," and the four smaller panels above this contain "The Carrying of the Cross," "The Burial," "The Resurrection," and "The Ascension of our Lord." All these *pictures*, as we must call them, are composed of thousands of pieces of mother-of-pearl, various woods, glass, &c., inlaid and forming a kind of mosaic. The attitude of the figures is good, the drapery severe without being conventional; but the chief beauty of these compositions, according to our authority, consists in the peculiar richness of colour, brought strongly forward by a background of black ebony. Here we have shells of various colours employed for brown or green drapery, which suddenly become yellow or black by a change in the position of the spectator. Others, again, sparkle in all the glories of the rainbow, as in the garment of the figure carrying the cross. Some idea may be formed of the minuteness of detail lavished upon this work, when we mention that one letter alone (the S in the I.H.S. on the cup which the Saviour is blessing) is composed of sixteen pieces! Each of the four lower panels contains a bunch of flowers, inlaid on a dark brown ground of Spanish walnut. The flowers are chiefly the *Nemophila* (light blue) and the *Iochyton* (bright red), in mother-of-pearl and enamel. The stems are of Tompack wood, and the leaves of brass. All these compositions are framed in by rich arabesques, still on the level of panels, but next frame. A plain chamfer leads up to the thickness of the frame, and is also ornamented with various woods, which are again inlaid with ivory, mother-of-pearl, and white metals. Finally, a narrow bead of ebony, with small white flowers let in flush, runs round each panel. The frame is, as we have said, of oak; but this, too, is richly overlaid with beads of the Tuja wood (a favourite wood of the Romans, and indigenous to the North of Africa, where it was lately re-discovered by the French), inlaid with arabesques in brass; and, at the meeting of styles and rails, are raised octagonal nail-heads, of ebony, the nine surfaces of which are enamelled red, blue, or green, and inlaid with flowers, wreaths, or crests of mother-of-pearl. There are two inscriptions; one, executed in Gothic characters, under the panel containing the Lord's Supper,—"This do in remembrance of me;" the other in small white letters,—"This door was presented to the Church of St. Nicholas, Hamburg, by N. H. Plambeck, designed by G. G. Scott, London, and executed by C. F. H. Plambeck, 1861—63." Notwithstanding all the minuteness of detail and richness of colour above described, the total effect of this door is described as very pleasing, especially by the contrast which it affords to the cold grey of the masonry around.

HOUSES AND HOUSE-BUILDING ACCORDING TO THE CENSUS.

A Parliamentary Paper, giving the results of the Census, has been published. We take from it the following facts touching houses:—

"We have, in conformity with the practice since 1801, for the sake of uniformity, enumerated as houses all the distinct buildings which were inhabited, as well as uninhabited houses, and houses building; and after thus avoiding the inextricable difficulties of the 'flats,' we have still many heterogeneous structures mixed up with houses in the ordinary sense of that word. The house is a very variable unit: it includes in the census the hut on the moor, the castle on the hill, and the palace; so that every one of these structures, and of the intermediate mansions

and cottages, is reckoned as a house. The ordinary house varies in size and structure in town and country—in its cubical contents, in its hearths, in its doors, and in its windows; so that to give a correct view of the accommodation which houses afford the population, and of their value, and of their sanitary influences, a special inquiry is indispensable.

The inhabited houses in England amounted in 1861 to 3,739,505, showing since the last census an increase of 461,166.

The great difference in these houses is shown by their annual value. Thus 519,991 houses are returned at rentals varying from 20*l.* to 20,000*l.* a year; or at 52*l.* 8 on an average.

3,219,514 householders, or more than six in seven, pay no house duty; and the annual value can only be estimated approximatively, by continuing the series as shown in the Table 31 (p. 92, App.). By this method the average rent of houses at rents under 20*l.* a year is 9*l.* 5; and the mean annual value of all the houses in England is 15*l.* 5 (15*l.* and 5 florins).

The annual value of all the houses at this rate is 58,013,181*l.*, of which 7,159,000*l.* is due to the 461,466 new houses erected in the last ten years.

At 15 years' purchase the dwelling-houses erected in ten years are worth 107,000,000*l.*; and all the houses standing in 1861 are worth 870,000,000*l.*

1,575,923 houses were inhabited in 1801, and the subsequent additions of new houses, besides replacing houses decayed and destroyed, leave a surplus of 2,163,582.

The value of the houses has probably increased in a greater ratio than their number.

181,691 houses were uninhabited, and 27,305 were building in 1861. To 1,000 houses inhabited there were 49 uninhabited and seven building.

The number of 'houses building' was 27,305, or in the proportion of one house building to 137 inhabited and to seven uninhabited.

The houses building were first enumerated in 1811; and the enumeration has been since repeated at every census. In a country under depopulation the old houses fall into decay; many houses are uninhabited; and few new houses at a census are "building." And as the question, is England increasing or decreasing, decaying or flourishing? was seriously discussed during the last French war, it was thought that the inquiry into the 'houses building' might assist in its solution.

Upon comparing the number of 'houses building' with the total number standing, this result is elicited:—In 1811, to one house building there were 114; in 1831, the proportion was one to 105; in 1861, it was one to 144.

This seems to imply that since 1831 this "indication of prosperity" has taken an unfavourable turn.

The question requires investigation, as it is by no means so simple as it appears to be on the surface.

Houses are built to replace old houses, and to provide for the new families of the increasing population. If we assume, for the sake of illustration, that one house in 100 falls into decay every year, so as to require reconstruction, the 3,431,533 houses of 1851 would be reduced, by the decay of 328,116, to 3,103,417 in ten years; but the houses in 1861 amounted to 3,924,199, or to 492,666 in excess of the houses in 1851: the new houses sufficing to replace the old houses, and to leave the enormous surplus, must upon this estimate have amounted to 820,782, or to 82,078 annually on an average.

If an equal number of houses is built every year, and they last on an average the same number years, the proportion which the number of houses building bears to the number of houses existing will depend on the mean time it takes to build a house. Thus, if the houses of a place amount to 1,000, and each lasts 100 years, the 1,000 houses will be kept up by the erection of ten new houses every year; and if each of the ten houses is built in a year, the numbers 'building,' corresponding to those at the census, will, on an average, be ten. If each house takes two years for its construction, twenty houses building will figure in the census return: if the houses are built in half a year on an average, five only will be building, for five built in the first half of the year, and five in the second half of the year, make ten annually.

The change in the proportion of the houses building to the subsisting houses is probably the consequence of the more rapid system of construction which is now carried on in the towns. Thus, if houses, including huts and cottages, as well as castles and palaces, were built at the rate of 82,078 a year, then the 27,305 building in 1861 would imply that they were built on an average in about four months. If the houses were built on such a system as to require five months and a half for completion in 1831, and four months in 1861, the difference in the proportion of houses building in 1831 and in 1861 would be accounted for by this cause alone.

That such an increase in the relative velocity of building houses has taken place, is quite in conformity with experience, and justifies us in refusing to consider the decrease in the proportion of houses building as any indication of the failing prosperity of England.

The uninhabited houses amounted to 184,694; or there were forty-nine uninhabited houses, besides seven building to every 1,000 inhabited houses. This number represents the number of houses absolutely uninhabited on the census night; for the Census Act did not enable us to distinguish the number of houses unoccupied by tenants paying rent to the landlord. The house unlet, in charge of a single woman, is counted as an inhabited house; and it happened in some cases that a house occupied by a tenant was uninhabited on the census night.

A return of the number of houses unlet would throw much light on the relative value of house property; but we found it impracticable to deal with this question without special local inquiries.

The number of inhabited houses was 3,739,505, and on an average there were 537 persons to 100 houses, making the proportion 5·37 to a house, or nearly 16 persons to three houses.

If the 397,582 persons in 1,684 institutions and ships are excluded, the persons to an inhabited house are reduced to 5·26.

The proportion of persons to 100 inhabited houses has gradually decreased from 575 in 1821 to 537 in 1861. This is a satisfactory movement, for the isolation of families in separate dwellings is in every way salutary.

This average, it is understood, is a mean result, and includes extremes and varieties of the utmost importance. We give illustrations of the variety of distribution in the houses of 14 sub-districts.

Thus, of 48,273 houses, institutions excluded, —2,417 were uninhabited; 1,601 houses contained one person in each, or 1,501 inhabitants; 5,361 contained two inhabitants in each house, or 10,722 in the aggregate; 6,627 houses contained three inhabitants in each house; 7,048 houses (the maximum) contained four inhabitants in each house; the numbers then gradually decline. Each of 25,319 houses contained five or more people; 4,465 contained 10 or more people; 1,389 contained 15 or more; 596 contained 20 or more; and 142 contained 30 or more inhabitants.

While more than half of the houses contain five or more inmates, more than half of the inhabitants live in houses containing seven or more inmates."

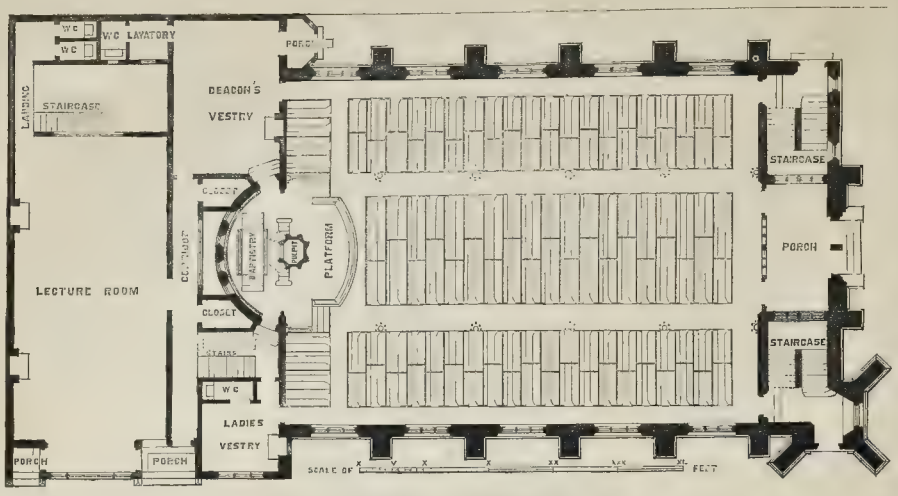
THE VIBRATION CAUSED BY RAILWAY TRAINS IN PASSING THROUGH A TUNNEL.

IN 1846, a railway through Greenwich Park having been threatened, Sir James South, with the permission of Lord Essex, freely given, erected a temporary observatory above the Watford tunnel, and watched the effect of passing trains in disturbing his astronomical observations. All risk of railway disturbance at the Greenwich Observatory passed away for the time, but the recent threatened extension of the metropolitan railways has led to the issue of Sir James's experiments in a printed form, through the medium of the Royal Society, to whom he presented a paper on the subject, which appears in No. 59 of Vol. XIII. of their Proceedings, under date 17th of December, 1863.

The chief results of these experiments were, that while the Pole-star's image as reflected from the mercurial surface, when no train was near, appeared as a very small, perfectly steady disk, this disk, as the train approached, broke up into a quintuple. As the disturbance increased, the form became linear at right angles to the length of the mercury-vessel. When the train was considerably advanced in the tunnel, a cross formed; and when near the perpendicular from the observatory, three parallel lines of disks appeared. As the tremors became more distant, these transformations of the image took place in a reverse order, until the star resumed its original disk-like form.

The tremor which is sufficient to produce that disturbance of the mercury which shows a cross of stars is propagated to considerable distances —in one case to 1,176 yards; and 24 per cent. of the entire are above 1000. Such distances do not pass the northern end of the tunnel, but go far beyond the southern. In the latter case the vibrations are excited while the train is in an open cutting; and those who suppose that the tunnel has much power in deadening them would of course expect that they would be sensible at a greater distance than at the other end. This does not seem, however, to be the case. There is no protecting power in the tunnel against the lateral propagation of tremors, whatever may be the case immediately above the crown.

In general, one might expect trains to produce disturbance in proportion to their speed and their weight. To a certain degree this is true; but the exceptions are sufficient to show that other influences must be taken into consideration. Any plan of protecting an observatory by slackening the speed of trains passing near it is entirely useless, even if it could be enforced. Slow trains have a high disturbing power; and it is probable that one cause of this is the long-continued accumulation of vibration, the quick ones passing beyond distance before the mercury has got into full vibration, the others having full time to do their work though with less intrinsic force. On this account also long trains are more disturbing than short.



The engine is not so paramount a disturber as might be expected, the heaviest, and even a pair of them, not causing more tremor than occurs with the smaller ones.

STREET LAMPS.

IN a pamphlet, "On Supplying Gas to Street Lamps," Mr. J. O. N. Rutter, whose name will be familiar to many of our readers, comes to the following conclusions; That the contract system is wrong in principle and inequitable in practice; that the only proper method for supplying gas to street-lamps is by meters—a separate meter to each lamp; that preparatory to the use of meters exclusively, and until various local or other special obstacles are removed, a system of meter averages might be advantageously adopted; that all the arrangements for lighting streets should be under the control of local authorities; that the only means by which the lighting of streets will be conducted in a satisfactory and economical manner, is by establishing and maintaining friendly feelings between the respective representatives of gas companies and local authorities; that improvements in columns, lamps, adjusting-taps, burners, regulators, meters, the means of lighting and putting out gas, and of fixing and protecting meters, should be sought for, encouraged, and subjected to impartial examinations and experiments. Mr. Rutter thinks that the price of gas for street lamps ought to be about the same as the lowest rate to private customers.

THE DEATH-RATE.

THERE is an old proverb in the northern parts of England, that "A green Christmas makes a fat kirkyard;" that is, when the weather is mild and open at Christmas time we may look for an excessive number of deaths. In a certain way the truth of the ancient saying has been proved in the present season, for the last autumn and the Christmas-time were remarkable for very fine and unwinter-like weather: the cold, however, was sufficient to cause that closing of doors and windows to which we have so often referred; and the air was not sufficiently bracing to prevent the spread of disease. During this time there was an excessive fever-rate; but when the frosty weather set in after the mild weather, the death-rate in the metropolis from various causes became excessive; and the same will be shown to have been the case throughout the country. The Registrar-General tells us that in the week ending the 22nd of January, although the deaths in London were less excessive than they had been during the week before, still there was an increase far above the average. The deaths registered during the three weeks up to the above date were 1,798, 2,427, and 2,180: in one week the number of deaths thus increased 629. In the corresponding weeks of the years 1854-63, the average number of deaths was 1,389, which, with a correction for increase of population, becomes 1,529; so that the deaths beyond the

WYCLIFFE CHAPEL, BIRMINGHAM——*Plan.*

average during the three weeks were 269, 898, and 651;—in all, 1,818 deaths. Supposing we take the entire population at about ten times the number of the dwellers in the metropolis, we should have in the three weeks 18,180 extra deaths. During the last week there were 403 deaths from zymotic diseases, including 88 from typhus, 73 from scarlet fever, 77 from whooping cough, 34 from measles, and 12 from smallpox.

WYCLIFFE CHAPEL, BIRMINGHAM.

THIS building is erected in Bristol-road, Birmingham, and is in the fourteenth century style of Gothic architecture, carried out with stones of different kinds and colours; Bath stone, from the quarries of Messrs. Randal & Saunders, being employed for most of the wrought parts and for the spire. It accommodates about 800 persons, and is built by private subscription among the Baptists of Birmingham; the outlay for the building being 6,000*l*. In addition to the chapel, with its tower and spire, the building contains three vestries, two large schoolrooms, library, kitchen, and the usual offices.

The interior of the chapel is divided widthways into three parts by columns of iron, which run up to carry the roofs, and also support side and end galleries. The roofs over the side galleries are groined in wood, and the central roof is boarded and panelled, the wood being of red deal, varnished. All the fittings are of the same material, with the exception of the pulpit, which is of white stone, wrought and carved with natural foliage, by Wood, of Lichfield. The iron columns in the chapel are of wrought and cast metal, combined with wrought hammer-beaten foliage to the capitals; and round the platform at the end of the building (upon which the pulpit stands) wrought metal balusters are placed. All this metalwork, as also the railings round the building externally, and the fringes on the point of the main roof, the terminals, vane, &c., were from the works of Mr. Thomas Brawn, in Clement-street, Birmingham. The baptistry is formed behind the pulpit, and is lined with white marble, wrought ironwork surrounding it, matching that round the platform. Along the centre of the main roof an air-chamber is provided, open at the bottom of the chapel, by panels filled with wire gauze; and externally, in connexion with this air-chamber, are erected the four-point ventilators, as patented by Muir & Son, of Manchester. The heating of the building was also done by the same firm. The ventilators are covered with lead and iron, and are intentionally introduced as features in the design. The chapel is entirely of stone, two sides fronting the Bristol-road and St. Luke's-street, and the third front coming within a few feet of the neighbouring houses, allowing only a passage-way to the vestry and library building; but here, although not much seen by the public, the same character has been bestowed upon the work, the windows, gables, buttresses, &c., being counterparts of those seen in the side of the building, as represented in our engraving.

The works were executed by Mr. Joseph Hardwick, of Bradford-street, Birmingham. The architect employed was Mr. James Cranston, also of Birmingham.

THE ARCHITECTURAL MUSEUM LECTURES.

THE usual course of lectures will commence in March next, and will include the following subjects:—"The Art-Workman's Position," by the President, Mr. Beresford Hope; who will also distribute the prizes for wood-carving and coloured decoration. "The Prospects for Good Architecture in London, judging from the Past and Present," by Cardinal Wiseman. "The Influence of Local Scenery on Local Architecture," by the Rev. J. M. Neale. "The Monumental Architecture and Sculpture of this Country during the Middle Ages," by Mr. M. H. Bloxam. "Early Brickwork in England," by the Rev. E. L. Cutts. "The Interior of a Gothic Minster," by the Rev. Mackenzie Walcott. "The Mediæval Houses of the City of Wells," by Mr. J. H. Parker; and "Painted Glass in its Connexion with Architecture," by the Rev. G. Ayliffe Poole.

BRITISH ARCHÆOLOGICAL ASSOCIATION.

AT the meeting held January 27th, Mr. G. Vere Irving, V.P., in the chair, Mr. Irvine exhibited the upper half of an exceedingly rare embossed tile, discovered on the site of Whitland Abbey, Carmarthenshire. In the centre was depicted the Holy Lamb, supporting the banner of the Cross, encircled by a band holding four shields, charged as follows:—1, a bend; 2, two bars; 3, a chevron; 4, a cross. Between the shields are placed a peacock, a peahen, a dragon, and a lion; and in the spandrels, *fleurs de lys*. It is of the thirteenth century. Mr. Cuming exhibited an encaustic tile of the fourteenth century, found in North Wales, stamped with the device of a rose of five petals. It has been glazed. Mr. S. Wood exhibited some relics discovered at Maidstone; an encaustic tile of the time of Edward I., a polychromic gally tile. Mr. Wood also exhibited two gally tiles with a geometric pattern of Moresco design. Captain Tupper exhibited some forgeries of antiquities purchased by a friend, from a man dressed as a "navvy," at St. Paul's Chain, whence he stated they had been obtained. Mr. Gould exhibited two others from Dowgate-hill; and Mr. Levien stated that within a short time as much of that rubbish as would fill a large wheelbarrow had been brought to the British Museum. Mr. Cuming stated that all these specimens tasted of nitric acid, into which they had been dropped from the plaster of Paris moulds in which they were made. A key of lock metal exhibited was of a novel character of this but too successful species of fraud, and antiquaries should be more careful.

The chairman, on the part of Mr. Greenshields, of Kerse, exhibited photographs of a discovery made in excavating at Carlisle, representing an assuarium of stone containing a large bottle with incinerated remains, a terra-cotta lamp, and small urn placed at the mouth of the vessel, upon which were found several iron objects, which, by extensive oxydation, had assumed the form of figures, and had been conjectured to have been penates. They are simply rusty nails, and were exhibited to the meeting.

Mr. Planché read an account of the discovery of a stone coffin, having on the lid a cross of the thirteenth century, found in Ash Church, near Sandwich. It had been the resting-place of an ecclesiastic, concerning whom Mr. Planché made some ingenious conjectures. Mr. Baigent communicated the particulars of the discovery of a leaden coffin at Bishopstoke, Hants, on the 16th January. In digging for gravel near the railway-station, the labourers struck upon some metal, which, on examination, proved to be a leaden coffin, so much oxydised that, upon its removal, it fell into portions and exposed the skeleton of a young female, with whom had also been buried three or four glass lachrymatories, or vessels, much injured by the falling in of part of the coffin. The coffin is unquestionably Roman, so also must be the glass.

The Rev. E. Kell also sent a notice of this discovery, and Mr. J. D. Smith drawings of the coffin and glass, and the subject was referred over to the next meeting for comparison. Mr. George Collins exhibited two photographs of the Bartlow Hills, threatened with destruction by a proposed line of railway. The Association had strongly expressed its opinion against the removal of objects so interesting to historians and antiquaries, and well known by the papers of the late Mr. Gage Rokewode in the "Archæologia." There can be but little doubt that the

WYCLIFFE CHAPEL, BIRMINGHAM. —MR. JAMES CRANSTON, ARCHITECT.

irectors and engineer of the railway will pay ttention to the representations so strongly made y societies and private individuals, and avoid njury to these interesting objects.

INSTITUTION OF CIVIL ENGINEERS.

On January 26th, Mr. J. R. M'Clean, President, n the chair, the paper read was, "The East Coast, between the Thames and the Wash Estuaries," by Mr. J. B. Redman.

The object of this paper, like that of 1852, on "The South Coast," was to describe the characteristics of a range of coast within certain limits; o trace the changes produced by constant natural causes, and the resultant influences on he various harbours; those of Harwich, Orford, Southwold, Yarmouth, Blakeney, Wells, and Brancaster, being mainly dependent on such natural barriers as those described; as also their improvement, or deterioration: in some nstances, as at Yarmouth, by judiciously-constructed works, material improvement was effected; and as at Orford, where no assistance was rendered, great changes occurred; or as at Harwich, where, from constant progressive change, it was difficult to speculate on the ultimate result of the continued operation of natural agencies, unchecked by works of a conservative character.

OPENING OF THE IRISH NATIONAL GALLERY AND INAUGURATION OF THE DARGAN STATUE.

On the 29th of January the Irish National Gallery was opened by the Lord-Lieutenant, after inaugurating the Dargan statue, in the presence of a large number of the nobility and gentry.

In order to associate the name of Mr. Dargan with the Great Exhibition at Dublin in 1853, which was carried out mainly at his cost, the genius of Mr. Catterson Smith, President of the Royal Hibernian Academy, and Mr. Thomas Farrell, R.H.A., was called into requisition, and the portrait in the gallery and the statue now inaugurated were the result. The trustees transferred to the Lord-Lieutenant the guardianship of the statue, which stands on Leinster-lawn, on the site of the Great Exhibition.

The Lord-Lieutenant at the inauguration, said;—

"My Lords and Gentlemen,—We have just performed our part together in a most just and becoming tribute to the excellent public servant and citizen whose statue we have now unveiled. His natural modesty, almost as remarkable as his merit, has prevented our seeing him at any side this day; but, at all events, I believe the talent of another citizen of Dublin, Mr. Farrell, enables us to recognise the form and features of William Dargan. We raise his statue because he supplies a memorable instance of how a simple, earnest, honest man, without any help from birth or fortune, by the energetic exercise of the faculties which God has given him, may not only raise himself to a commanding level beyond his own original position, but may also confer signal benefits on the men of his day and upon the country which has learnt to be proud of him and thus prides to show it. In the adjoining building which we are about to open we shall pay fitting honour to those fine arts which bespeak the highest progress of refinement and adorn the summit of the social column. While thus recognizing upon our way these illustrious workmen, we do well to mark that the true base of all national prosperity is to be found in the steady industry of which William Dargan was so eminently the type and teacher."

The Lord-Lieutenant then proceeded to the National Gallery, followed by the distinguished company on the platform around the statue. The hall was occupied by a crowded assembly of the nobility and gentry, and the leading citizens; among whom were the Archbishop of Dublin, the Lord Chancellor, the Lord Justice of Appeals, the Lord Mayor, Lords Roden, Howth, Meath, Talbot de Malahide, Dufferin, and many other persons of note.

SANITARY CONDITION OF THE CITY OF LONDON.

At a recent meeting of the Commissioners of Sewers, Dr. Letheby presented his annual report on the sanitary condition of the City, in which he states that, in the course of the last year, there were 2,962 births, 2,870 deaths, and 1,701 marriages registered in the City. Each of these numbers is below the average for the last ten years. The births have declined from an annual proportion of 3,350 to 2,962; the deaths from 2,969 to 2,870; and the marriages from 1,712 to 1,701. Taking all the males in the City who are at twenty and upwards, the mean death-rate is 22·9 per 1,000; but with shopkeepers, merchants, and butchers, it is only about 16 per 1,000; with shoemakers, blacksmiths, carpenters, and watermen, it is from 23 to 24 per 1,000; with clerks, porters, messengers, tailors, and painters, it is 26 per 1,000; with cabmen, ostlers, and costermongers, it is 29 per 1,000; and with labourers, masons, and bricklayers, it is nearly 44 per 1,000. There were 214 deaths in every 1,000 of all the deaths from tubercular diseases, 164 in every 1,000 from inflammatory affections of the lungs, and 235 from diseases of a zymotic character. In all England the proportions are 160, 149, and 194 respectively. The miasmatic diseases during the last year have been in excess of the common average not only for the whole country, but for the City. The chief increase has been caused by an excessive mortality from smallpox and scarlet fever, both of which have been unusually prevalent during the last twelve months. Fever has had a general mortality during the last nine years of 38 per 1,000 of all the deaths among males of fifteen and upwards; but among clerks, butchers, cabmen, and watermen it has ranged from 43 to 49 per 1,000 of the deaths; and with male domestic servants and labourers it has been from 51 to 54 per 1,000. Among females the average mortality from fever is but 36 per 1,000; but among the wives of cabmen it has been 55; and among needlewomen, nurses, charwomen, and domestic servants, it has been from 103 to 106 per 1,000.

THE GIBSON ALMSHOUSES, BISHOPWEARMOUTH.

The Gibson Almshouses in Bishopwearmouth were founded by Mrs. Gibson in the year 1727, for the use and maintenance of twelve poor women. In 1862 the buildings had fallen into a damp unwholesome state, and the trustees placed the matter in the hands of Mr. E. R. Robson, architect, of Durham. The rebuilding commenced in the spring of 1863, and has now been brought successfully to a close. On plan, the building assumes the shape of the letter L, and was so arranged that all the living-rooms might have a sunny aspect. Each of the inmates (of whom four will be men) has an airy living-room, in which is a small cooking-range; a bedroom, and a roomy pantry; the whole inclosed by one door. Of the rooms belonging to one inmate, four sets are entered by one front door, viz., two on the ground-floor and two on the first-floor. Each landing has a water-closet communicating with the outer air. The style is Early English. It has been the architect's aim to make these buildings look like plain, substantial almshouses; and, while adhering to the style, not to refuse the assistance which modern science can afford. The roofs are slated, and their monotony is broken by gabled windows terminating with sculptured finials. On one of the two main gables of the building will be sculptured the arms of the Right Hon. J. R. Mowbray, M.P. for the city of Durham (who, by his marriage with and taking the name of Miss Mowbray, became the principal trustee of the charity), and anthor of the rebuilding. On the other gable the following inscription will be placed:—

"Has Ædes
in usum egenorum
a Joanná Gibson
fundatas, A.D. 1727,
restituendas curavit
Elizbta Gray Mowbray,
A.D. 1863."

The cost of the building will be a little above 2,200*l*. The trustees of the almshouses deserve great credit for having already swept away a den of filthy lodging-houses in the neighbourhood of their property; and the sanitary committee of the corporation is about to demolish an abominable ashpit, &c., in the same neighbourhood.

THE GALLERY OF ILLUSTRATION, REGENT STREET.

The new entertainment here, "The Pyramid, or Footprints in the Sand," is very successful. Mr. Shirley Brooks wrote it, Mr. German Reed composed the music, Mr. Telbin painted the scenery, and Mr. and Mrs. Reed and Mr. Parry act and sing it. The principal scene shows, with various effects of light, the Sphynx, the Nile, and the Great Pyramid, and is received each night, as it deserves to be, with a long shout of applause. As in life, each man, and woman too, plays many parts: thus Mrs. Reed, besides herself, represents Miss Rose O'Grady (with an admirable sketch of a journey, the best thing in the piece), Achilles Rododaculos, a Greek interpreter (with a capital dissimulation song), Abdallah, an Arab boy, Mrs. Stratford Bow (with another telling song), and Fatima, a slave; Mr. Reed is otherwise the Hon. Dangleton Spangledore, the Pasha Suleiman Ataglan, Arthur Wimbleton, a model cadet, Bobby Bow, and then himself again; while popular John Parry takes the mien and bearing of Mr. Barnabas Boanerges Bradshaw, M.P., Signor Morgantino, a magician, Ibrahim Boshkoku, a dragoman, and Muley Ali Hassan, a slave merchant. It is one of the very best things they have done.

RYFFEL'S HYGEIAN STOVE.

The arrangement of this stove seems to us very good. Between the fire-box and the outer cylinder there is everywhere a space, so that the latter is warmed only by heated air, and emits no fumes; while the mode of supplying air to the fire is such as to admit of the most complete control.

When the stove is lighted, no further attention is needed. The smoke is carried off by a small pipe passing into a chimney or flue, or in any other convenient way. In the words of the patentee, "The firewood is lighted on the top of the coal, and the fire then shut in with the cover of the fire-box: the supply of air being thus cut off from the top, a vacuum is produced, which immediately causes a downward suction of the fire to, and an upward draught of the air from, the grate; the two elements meet, and the action of the stove is at once established. The coal ignites very quickly. When this has taken place, and the regulator is partially closed, the fire is fed by highly rarefied air, which not only greatly retards the combustion of the fuel, but actually controls the fire in such a manner that, without losing any of its intensity, it can neither increase nor decrease, but continues burning regularly until all the fuel is consumed."

The stove is evidently economical, and produces uniformity of temperature.

SCHOOLS OF ART.

The Norwich School.—The annual meeting of the subscribers of this school has been held at the Free Library. The report stated that the past year had been one of progress. At the examination in the early part of the year, the number of local medals awarded was the largest that could be held by the school, namely, thirty, besides a National Medallion for a work by Francis Hill. The committee trusts that the friends and patrons of art in Norwich will support the school through the present crisis in the history of such schools by increased pecuniary aid, and thus save a valuable institution from all danger of decreased usefulness.

The Sheffield School.—The annual *conversazione* of this school has been held, at the rooms in Arundel-street, which were filled with a numerous company. The chief attraction which this annual *conversazione* possesses, is the collection of paintings that is always made; this being the only exhibition of the kind that the people of Sheffield have ever an opportunity of seeing within their own town. The attraction has been attributed mainly to the taste and energy of the late and present head-masters, Mr. Young Mitchell and Mr. W. H. Sounes. The present exhibition, this year, according to the local *Independent*, has never been surpassed, with one exception, and the school is now in its twenty-first year. Mr. W. Overend occupied the chair, and delivered an elaborate address on the subject of art, in the course of which he said:—

"The revival of art in England has manifested itself in a very remarkable way. In former times art was mainly dependent upon such encouragement as it received from the noble and the great. Within the present century a neighbour of ours, known to many of you, but who would probably not like me to mention his name, went to Turner, and gave him a commission for one of his great paintings. He was the first man of his rank in life who had done so; and he remarked to Turner, 'I dare say you will not execute it. I am not a lord—I am only a manufacturer, and you are not in the habit of taking commissions from any but the great and noble.' Perceiving at once the value of having patrons among the middle classes, the great painter replied, that he should be only too happy to execute the order; and he did execute it, producing one of his very highest works of art. Since then there has sprung up amongst the manufacturers of Manchester, Liverpool, Preston, Sheffield the manufacturers of Yorkshire and Lancashire generally—a great desire for works of art, encouraging artists, and making the pursuit of art lucrative to an extent never before realised. Instead of having to rely upon the patronage of the noble, artists now find their chief customers amongst the wealthy and intelligent manufacturers of our great centres of industry. No one has visited amongst the manufacturers and mer-

chants of Yorkshire and Lancashire without being astonished at the splendid collections of pictures to be found in their drawing and dining rooms. In looking at the teaching of the schools in France, and the works of art produced there, we find in them, as contrasted with those in England, this marked difference: in France we have all sorts of grotesqueness. There is often great firmness of outline, and beauty of drawing, but there is a want of that severe taste which can only be obtained by a cultivated study of the models of the antique, and which is one of the characteristics of English schools. And that is not the only testimony in our favour. We were behind the French at the Exhibition of 1851; but our position was much improved at the Exhibition of 1862."

The chairman afterwards distributed the prizes, and offered one of 50*l.* for future competition. The candidates of the first and second grade of this school are characterised by the Government authorities as having reached a higher standard of success than in any year since 1860.

The Wolverhampton School.—The annual meeting of this school for the distribution of medals and prizes to successful students has been held; the Earl of Dartmouth in the chair. There was not a large attendance, except of students. Numerous works of art executed by the students were exhibited. Mr. Loveridge, the chairman of the committee, read the report, which drew attention to the fact that at the end of 1862, after nine years' existence, which was successful in everything but its pecuniary results, the local School of Practical Art ceased operations. Many of the old pupils and some of the active supporters of the school then induced the present committee to make a last effort to maintain such a school in Wolverhampton. They consented, secured the services of Mr. Sturtevant as master on very liberal terms, and the school was allowed to be held in that building upon the payment of 80*l.* per annum. In every respect but pecuniary matters the school had been prosperous, the balance against it being 36*l.* The number of scholars had steadily increased, and at the annual examination by the Government Inspector, in October last, eight local medals were awarded, five works were selected to go up to London for national competition, and four passed the second grade examination in freehand or model drawing. Thirty-eight scholars in connexion with chapel schools also passed, being ten above the previous year, when seven schools were examined. The total number that had been taught through the agency of the school was 788, 135 of whom had attended the central school. The Earl of Dartmouth afterwards addressed the meeting and distributed the prizes.

The Newcastle School. The Christmas exhibition of the works of students connected with this institution has been opened. The Christmas competition is a purely local one, the prizes given being provided at the cost of the committee, or of private gentlemen, and differs, therefore, from the Midsummer examination by the Government inspector, when certificates and prizes are awarded by the Board of Trade. The exhibition is considered to be a good one. A Newcastle paper, in noticing it, says:—"That a very slight effort on the part of a few opulent gentlemen would give an impetus to the school is seen in the spirit of emulation which is excited by the competition for Mr. George Cooper's annual prize for designs for paper-hangings, picture-frames, &c. A design for a villa, or some other residence, given by the Architectural Association; designs for plate or gas-fittings, given by some of our local silversmiths or manufacturers; designs for earthenware in form or pattern, or designs for furniture, would also doubtless be as eagerly competed for."

Mr. Potter, M.P., on Schools of Art.—Mr. Potter, M.P. for Carlisle, recently attended a meeting of the committee of the Carlisle School of Art in the Townhall, to confer with them upon the subject of the Government grant to the schools of art throughout the kingdom. In the course of his address he said he thought if the country schools were to put some pressure upon the Government, and bring the facts of the case before them, some good might be done. It would be a matter of great regret if the provincial schools had to be given up. The Kensington schools had certainly produced a very good class of training-masters, which they could not meet with at first; but they could not expect the supply could be kept up if the emoluments were so small. Looking at the enormous expenditure at South Kensington, where the 575 students cost as much, he should say, as the whole of the art students in the kingdom, he thought the other schools should have a better share. Of course the Government would have a perfect right—indeed, it would be their duty—to inspect the schools. The country schools only wanted what was fair, and he feared the reductions made in them would be greater and greater still unless some appeal were made to Government. It was finally resolved that the committee of the school should prepare a petition to Parliament, praying for a more equitable distribution of the Government grant.

THE METRIC SYSTEM OF WEIGHTS AND MEASURES.

At the Society of Arts, Adelphi, on the 27th ult., the paper read was "On the Metric System of Weights and Measures, and its Proposed Adoption in this Country," by Mr. Samuel Brown, F.S.S., Vice-president of the Institution of Actuaries; in the course of which he expatiated on the great advantages, social, commercial, and political, which would attend the use of one system of weights, measures, and coins throughout the world. Such a result, he said, is frequently deemed to be merely the dream of a visionary, or the speculation of a philosopher who has no practical knowledge of the world, and it must be granted that the difficulties are great. Yet, the present century has witnessed great changes in the old practice, and all tending towards a uniform standard. He then proceeded to give a sketch of the present position of the question, and to show what has been done and is doing to carry it on. In conclusion, he remarked that though the metric system appears to be in all respects distinct and opposed to our own, there are several points in which it would nearly accord with existing weights and measures. A meter, which is the basis of all, corresponds to 39·37 English inches, about $1\frac{1}{10}$ yard; 1 pole or perch ($5\frac{1}{4}$ yards) = 5·029 meters, about 5 meters; 1 furlong (220 yards) = 201·165, about 200 meters; 5 furlongs = 1,005·822, about 1 kilometer; 1 foot = 3·048 decimeters, about 3 decimeters; they are = 119·5 square yards, nearly 120; the liter = 61·03 cubic inches, or 2·1135 wine pints, nearly 1 quart; the gram = 15·434 grains; the kilogram = 2·205 lb. avoirdupois; the half-kilogram = about 1 lb.; the ton = 1,015·65 kilograms, say 1,000.

Our exports to countries using the metric system have increased from 23,696,000*l.*, in 1847, to 55,242,000*l.* in 1861, an increase of 133 per cent.; whilst to countries using the English system they increased only from 16,262,000*l.* in 1847, to 24,211,000*l.* in 1861, or less than 50 per cent. increase.

If the metric system be once legalized in this country we can hardly form an estimate of the immense benefits that would follow to the commerce of the world. Our colonies would naturally, and for their own sakes, adopt the system of the mother country, with whom their trade principally lies. India, which has no common system of weights and measures, but, under the varieties of native governments, is full of incongruous and absurd systems, by which it cannot be doubted the labouring classes especially are exposed to false weights and trade frauds, might by our influence gradually find one simple system prevailing throughout the whole of those vast dominions. The Americans, who have long agitated this question, would not, we are assured by the American delegates who have been sent to our European congresses, hesitate to make the change. They are only deterred now by the disturbance that would arise in their large trade with this country as long as our present system continues. An impetus would be given to Russia and Germany to complete the work to which they are already half committed.

The expression in the old English statute that "there should be but one measure and one weight throughout the land," might be expanded into the grander idea which would then be almost realized, that there should be but "one measure and one weight throughout the earth." Commerce, the real harmonizer of nations, uniting them in the bonds of mutual interest and growing esteem, would then receive a still greater development than has occurred even in the last few years, diffusing everywhere the blessings of peace, and causing all nations to pause ere they precipitated each other into the calamities of war.

A discussion followed in which, amongst other speakers, Mr. W. Hawes, the chairman of the council, opposed the system, and Dr. Farr defended it. Professor Leone Levi, Dr. Waddilove, Mr. F. Lawrence, and other gentlemen, also took part in the discussion.

CHURCH-BUILDING NEWS.

Kensington.—A new district church has been commenced at Campden-hill, to be called St. George's. It will accommodate 1,500 persons and will be built externally of Bargate stone with dressings and decorative details of Bath, red Mansfield, and Kentish rag stones; and finished internally with brick in various colours. The style is Continental Gothic, freely treated. The contract has been taken by Messrs. Geo. Myers & Sons, at 7,000*l.* The church is being erected at the sole cost of Mr. John Bennett, of Westbourne Park-villas; and the architect is Mr. E. Bassett Keeling.

Hampstead.—The reconsecration of St. Paul's, Hampstead, in the Avenue-road (a chancel and aisles, and transepts having been added), was to take place on Thursday in the present week. It is a little elaborate. The arches are all set in bricks, as a mosaic, and the walls finished in stencil fresco as well as the roof. The reredos is not yet complete: it will be a work of stone and marble, remarkable for panels occupied by Scripture subjects in Italian mosaics. Mr. S. S. Teulon was the architect employed.

Mortlake.—Christ Church, East Sheen, which met with a disaster in the spring of last year, has been finished, except the belfry part of the tower which is now in the course of being completed. The total cost, when completed, will be 5,940*l.*, and over 5,000*l.* had been subscribed previously to the consecration. The style of architecture is French Gothic. The interior dimensions of the building are as follows: the chancel is 29 feet 6 inches by 24 feet: the vestry, which is situate on the north side of the chancel, is 14 feet by 9 feet 6 inches: the length of the nave to the chancel is 76 feet: the width of the nave and south aisle is 46 feet: there is no aisle on the north side at present. The tower, which is situate on the south side of the chancel, will be 100 feet in height; and underneath is an entrance. The main entrance is at the western end, by two doors, over which is a tracery wheel window of twelve lights. Mr. A. W. Blomfield is the architect; Mr. Carter, of Islington, is the builder; and the whole of the works since the accident referred to have been carried on under the superintendence of Mr. J. R. Edmunds, as clerk of the works. Over the communion-table is a stained-glass window of five lights. In the three centre lights is illustrated the "Parable of the Talents," and beneath them "The Parable of the Wise and Foolish Virgins;" in the opening on the left hand "The Good Samaritan and the Prodigal Son;" and in that on the right "The King's Vineyard and Lazarus and Dives." In the tracery is the subject of the Ascension, with angels, emblems, &c. In the base of the window is the following inscription:—"In memory of Edward Penrhyn, Esq., formerly one of the Chairmen of the Quarter Sessions for the County of Surrey. This window is erected by his brother Magistrates, A.D. 1863." The window cost 250*l.* In the north aisle is a two-light window, the gift of Major Penrhyn, as a memorial of his three children. In this the following subjects are illustrated:—"Christ Blessing Children," "The Good Shepherd," "Gehazi meeting the Shunamite Woman," "David Fasting after his Child's Death." In the tracery, "The Nativity attended by the Angelic Choir." In the south aisle is a window of two lights, the gift of Capt. O. Ommaney, illustrating "The Queen of Sheba visiting Solomon," and "The Adoration of the Wise Men." In the tracery "Solomon Building the Temple." Capt. O. Ommaney has also given a stained-glass tracery window of seven lights, representing "The King of Kings" in the centre, with a choir of angels in the other separate lights. These windows have been erected by Messrs. Heaton, Butler, & Bayne.

Rochester.—The committee for providing a parsonage house for the parish of St. Nicholas, Rochester, have issued a statement, in which they say,—The Governors of Queen Anne's Bounty are now in treaty with the Governors of Christ's Hospital for the purchase of a most eligible piece of land, containing one acre and a quarter, for the sum of 380*l.* The Ecclesiastical Commissioners are willing to grant for this purpose an amount equal to any that can be locally raised. If the sum of 500*l.* can be collected from the inhabitants and friends of the parish by the 1st of June next, it is believed that sufficient funds can be obtained to provide a suitable parsonage house, without laying any burden on the living by the necessity of a loan.

Ryde.—A meeting of influential inhabitants has been held for the purpose of considering the

irability and the practicability of erecting a
y church for the St. Thomas's district of
de. The vicar opened the proceedings, after
ich it was unanimously resolved "That it is
irable for the town of Ryde that a new
rch should be built," and "That a parson-
house should be built in connexion with the
rch." A committee was formed to carry out
objects in view.

Tenterden.—At a meeting of the church resto-
ion committee, the following and other reso-
ions were carried unanimously:—That 10*l.*
compensation be given to Mr. Bourne for
trouble in preparing a tender. That it be
nmunicated to Mr. Bourne that the committee,
exercising their right to select other than the
west tender, did not mean to imply any doubt
his professional competence. That the vicar,
rchwardens, the mayor, and Mr. W. C. Whelan,
authorized on the part of the committee to
n the agreement—prepared by Mr. E. Chris-
n, and approved by the vicar, churchwarden,
d vestry clerk—with Mr. P. Newnham. That
r. Aylon's tender for 23*l.* 10*s.*, for moving the
gan, be accepted.

Ifley (Oxfordshire).—A gift has been made by
iss Marshall, of Ifley, to the parish church, in
e shape of a new reredos, which has been
ecuted by Mr. John Fisher, builder, from the
sign of Mr. J. C. Buckler, architect. Painswick
one has been employed: there is an alabaster
oss in the centre, and the columns are serpen-
ne and of different colours, while the recesses
e decorated.

Cambridge.—Great St. Mary's Church was to
e re-opened for Divine service on the 2nd of
ebruary. The alterations in the University
urch, at the cost of the members of the Univer-
ty, are as follows:—The doctors' gallery, which
ed to block up the chancel, the undergraduates'
estern gallery, and the pulpit, have been re-
oved; the chancel fitted with carved oak stalls,
nd the whole body of the church reseated with
ak benches, from designs by Mr. G. G. Scott.
he church is now open from the western arch
nder the tower to the extreme east end: the
de galleries, which are necessary for the accom-
odation of the University, rather mar the
eneral effect. The east end is still very shabby.
rofessor Lightfoot is going to put up a reredos
t his own expense. The pulpit is to stand
gainst the north pier of the chancel arch.

Stow.—The work of completing the restoration
f Stow Church is about to be resumed by the
ncumbent, the Rev. G. Atkinson, who, with
ther members of his family, contributes 1,500*l.*
Several thousands of pounds will be required to
arry out the restoration of the whole fabric:
he total sum now raised amounts to about
,000*l.*

DISSENTING CHURCH-BUILDING NEWS.

Newmarket.—The new Congregational Chapel,
n this town, is now completed. The site upon
which this edifice is erected is a portion of that
f the well-known palace, built by King Charles
I., from designs by Sir Christopher Wren, which,
when given up by the sovereigns of England,
was given by William IV. to the late Duke of
Rutland, who used it as a shooting-box up to
the time of his death. The foundation-stone was
laid by Mr. John Crossley, the Mayor of Halifax,
on the 9th of October, 1862. The chapel is of
the Mediæval English character, the style being
that of the latter half of the Early English
period, and forms a parallelogram 68 feet by 42
feet, internal dimensions, divided into nave and
aisles by means of ornamental iron columns. At
the south end of the building is a large octagonal
apse, in which a carved pulpit, made of the old
oak of the palace, is placed, as well as a per-
manent platform enclosed by oaken rails, and
intended for the administration of the Holy Com-
munion and for speakers at public meetings. At
the north end is a gallery extending the whole
width of the chapel, supported by iron pillars,
with an open traceried iron front, beneath which
is a lobby forming an extensive vestibule to the
external projecting porch, paved with encaustic
tiles. The roof is divided into nave and aisles,
and admits of an arcaded clerestory between
them, glazed from end to end. This is sup-
ported by the iron columns, carrying a series of
five wooden arches springing from hammer-beams.
The flank walls of the edifice have each a corre-
sponding number of plain two-light trefoil-
headed windows; and in the gable fronting the
High-street of the town is a window of geo-
metrical tracery, 25 feet by 12 feet. The sitting
portion of the chapel is formed of low open
benches, the backs and ends of which are made
of the oak taken from the roof of the old palace,
and the communion-table, chair, and the major
part of the joiners' work are of the same ma-
terial. Including the end gallery, there is
sitting accommodation for about 700 persons.
Attached to the chapel, on the west side, is a
prominent tower surmounted by a bell-turret,
containing an illuminated clock. A vestry and
sacristy complete this building, which has been
erected at a cost of about 2,200*l.*, exclusive of
the value of the old material of the palace. The
architects were Messrs. Habershon & Pike, of
London; the builder being Mr. Haines, Gurt-
ford. The members of this church contemplate
building a school and class-rooms upon the space
at the back of the chapel.

Wolverhampton.—The new Baptist chapel in
this town has been opened for divine service. It
is situate in the Waterloo-road, and will accom-
modate about 550 persons, with space for further
increase, by the addition of side galleries, for a
total of 750. A lecture-room, 60 feet by 45 feet,
is provided in the basement, and a second
lecture-room, 39 feet by 17 feet, and vestries,
in the rear of the chapel. Externally it is faced
with red brick, relieved by bands and arches of
blue brick and Bath stone dressings. The prin-
cipal front is finished with a low-pitched gable,
with a stone cornice and wrought-iron finial, and
contains in its upper stage a triple group of
semicircular-headed windows, divided by wide
Bath stone mullions and red Codsall stone
columns, with white stone moulded bands and
carved capitals and springers. Its lower stage
is occupied by the principal entrance doorway,
consisting of a deep semicircular-headed arch,
supported on stout red stone columns, with
carved capitals. The arches generally of the
principal front are alternated in brick and stone,
and have moulded and carved labels, and the
jambs and mullions have attached shafts of red
stone. The south angle of the principal front is
occupied by a staircase tower, with slated curb
roof, and the north angle by an apsidal staircase
wing. Internally the chapel is roofed in one
span, and is ceiled at the level of the collar-
beam, the ceiling being divided into panels by
chamfered timber ribs, stained and varnished,
and the plastering tinted a light grey and deco-
rated with stencilling. The baptistery is placed
behind the pulpit, under a lofty semicircular
moulded arch, and is enclosed with an orna-
mental railing. The chapel is lighted by gas
"starlights," the gas-fitting being executed by
Mr. Fuller, of Hatton-garden, and is heated by a
hot-air apparatus, by Messrs. Claridge & North,
of Wolverhampton. The architect was Mr. Bid-
lake, of Wolverhampton; and the builder, Mr.
Burkitt, also of Wolverhampton. The entire
cost of the building will be about 2,600*l.*

Darlington.—Mr. J. R. Wilson, painter, of this
town, has just completed and fixed a window in
the south gallery of this church, its cost being
defrayed by a few of the members of the con-
gregation. The workmanship is in the diaphanic
process, a cheap substitute, as our readers are
aware, for stained glass. A contemporary says
that "without close examination it cannot be
known from it."

STAINED GLASS.

St. George's, Bickley (Kent).—The five win-
dows to the chancel of this church, which is
apsidal, have been filled with painted and
stained glass. Each window comprises two large
openings, with a tracery heading, and each
opening contains two groups. Beginning on the
north side, this window relates to St. Thomas.
One group represents the Grief of St. Thomas for
the Death of Lazarus. 2nd. The Incredulity of
St. Thomas. 3rd. St. Thomas preaching to the
Indians. 4th. The Martyrdom of St. Thomas.
In the tracery light are the emblem of St.
Matthew, and ornamental devices. Each open-
ing throughout the whole of these windows is
surrounded by flower-borders, the groups being
on grisaille backgrounds and mosaic. The next
window illustrates an event relating to each of
the evangelists, viz.;—1st. The Call of St.
Matthew from the Receipt of Customs. 2nd. The
Martyrdom of St. Mark. 3rd. St. Luke writing
the Acts of the Apostles, dictated by St. Paul, a
prisoner. 4th. St. John with St. Peter healing
the Lame Man. In the tracery light is the
emblem of St. Mark, &c. The next window,
which is in the centre, relates to Our Saviour.
1st. The Nativity of Our Lord. 2nd. His Bap-
tism. 3rd. The Crucifixion. 4th. The Ascen-
sion. In the tracery are the shield of St. George,
&c. The next window contains four scenes re-
lating to the good Samaritan. 1st. Shows the
traveller attacked. 2nd. The traveller is passed
by the priest and Levite. 3rd. The Samaritan
pouring in oil and wine, and dressing the
wounded traveller. 4th. Their arrival at the
inn. In the tracery light is the emblem of St.
Luke, &c. The next window contains four scenes
relating to St. George (the patron of the church).
1st. St. George and the Dragon. 2nd. St.
George tearing down the Edict from the Church
Doors for the Persecution of the Christians. 3rd.
St. George leading the Army at the Siege of
Antioch. 4th. The Martyrdom of St. George.
In the tracery light is the emblem of St. John.

St. Andrew's, Romford.—A painted window,
memorial of Mr. George Coope, has been recently
placed in the east end of this church. The sub-
ject carried through the three great lights is
"The Institution of the Holy Eucharist." Above
is a coloured arcade of grapes and wheat. The
figure subjects are enshrined in jewelled cano-
pies. In the four chief openings of a flowing
tracery are seated figures of the evangelists, and
in the two lights next in importance are stand-
ing figures of St. Peter and St. Andrew, to the
latter of whom the church is dedicated. The
remaining portion of the tracery is filled with
ornament of the vine, emblem of the church of
Christ. Messrs. O'Connor, of London, were the
artists.

St. George's, Kidderminster.—A new stained-
glass window will shortly be placed in this
Church, and other improvements are likewise to
be made there. The new window is from a de-
sign by Messrs. O'Connor, of London, and is of
circular form. It is divided into thirty-two par-
titions, and contains a small centre panel, having
within it the letters "I. H. S." The partitions
are filled up with figures of angels bearing harps,
intermingled with scroll work, and wreathed
with olive-leaves. The window, which is up-
wards of 12 feet in diameter, will be filled in
above the Communion-table. The cost of the
glass is 115*l.*, but a further sum will be required
to defray the expense of placing the window in
position, and cleaning and renovating the church.
Promises to the extent of 170*l.* have been given.
The pulpits are to be removed, and a carved oak
eagle for a lectern has been presented by the
Earl of Dudley, at a cost of eighty guineas.
His lordship purchased one in the Exhibition,
but owing to the wood having split, he has
ordered another to be made from a solid block of
oak. The eagle and pillar stand above 6 feet
high.

PROVINCIAL NEWS.

Braintree.—The new Braintree and Bocking
Literary and Mechanics' Institution has been
opened. The new building has been presented
to the Literary and Mechanics' Institution by
the late Mr. George Courtauld. It has been
erected at a cost, including purchase of site, &c.,
of about 2,000*l.*; the architect being Mr. Henry
Stock, of London, the Essex county surveyor;
and the builder, Mr. J. Brown, of Chelmsford
and Bocking. It is built in the Italian style, the
front being faced with white bricks, and the
mouldings executed in Bath stone. The front
portion, containing reading-room, library, com-
mittee-room, hall, and staircase, is two stories
high; and the lecture-hall, capable of seating
upwards of 500 persons, runs out behind upon
the ground floor. The lecture-hall walls are car-
ried about 10 feet high, with piers projecting
inside: these support moulded arched ribs, the
ceiling being a semicircle, and rising to a height
of about 26 feet. The platform at the end runs
entirely across the room, and is about 9 feet
wide. At the back of this is a retiring-room,
for lecturers or performers. The hall is lighted
by day with windows on either side; and at
night, by two rows of hanging starlight gas-
burners. The reading-room runs along the en-
tire front, on the first floor, and is 37 feet long
and 17 feet wide, with five circular-headed win-
dows in front. Out of this opens a small room,
for chess, &c. The library and committee-room
and offices are on the ground floor. The entrance
from the road is formed by an iron fence and
gates, and white brick piers, with stonework,
surmounted by globe lamps. The interior fit-
tings of the building have been executed by Mr.
W. Parmenter, of Bocking, and Mr. F. B. Crittall,
of Braintree.

Romsey.—A deputation of the committee con-
cerned in carrying out the new Town-hall and
Exchange project in Romsey, waited upon Lord
Palmerston to submit the plans of two sites

which had been selected as eligible for the new building, and to report progress in general. The deputation was accompanied by Mr. Bedborough, of Southampton, who had prepared the plans. His lordship expressed a preference in favour of the site in the Market-place to that in the Corn Market, and agreed to double his subscription to start with. He approved of the front elevation designed by Messrs. Hinves & Bedborough.

Bridgwater.—The new Market Hall and Corn Exchange building has been opened. The new building is of Composite order. The designs were prepared by Messrs. Barrett & Son. The dimensions are 56 feet long by 36 feet wide. The lower part is fitted up as butchers' shambles, with seats and tables for butter, eggs, poultry, and general merchandise. The upper part is to be used as an assembly-room and Corn Exchange, the dimensions of which are 52 feet long by 22 feet wide, with two retiring-rooms, each 16 feet long by 11 feet wide, approached from below by a staircase of pitch pine, with mahogany handrail and oak balusters. The assembly-room has a cornice, with line enrichment and three centre ornaments, in flowers, from which are suspended three chandeliers. There is also an orchestra over the staircase open to the assembly-room, 16 feet long by 11 feet wide.

Bewdley.—The local council have taken steps towards the erection of a public building for the general use of the town. They have resolved to apply to the Treasury for a sum of money for that purpose, not to exceed 1,500*l.*, out of the borough funds.

Stourbridge.—The new County Court, in Hagley-street, has been opened. It is in the Italian style, and is built of Hollington (ashlar) stone. The public entrance is in front, and the private entrance at the side of the building. It is two stories in height, and the windows on the ground-floor are segmental, while the upper ones are semi-circular. The ground-floor consists of a court-room, 50 feet by 31 feet, and 21 feet high. This, however, is not large enough for the requirements. It is lighted from two lantern windows in the roof, and likewise from semicircular side-lights. At night the room will be lighted by gas from brackets. The other part of the same floor consists of a plaint office, a money office, registrar's office, and judge's private room. A flight of stairs leads to the first door, this including high bailiff's office, sub-bailiff's office, ante-room, and four rooms for domestic accommodation. Mr. Lovatt, of Wolverhampton, was the builder, and furniture and fittings have been furnished by Mr. Stringer, of Stourbridge. The cost of the building (independently of land) is 3,300*l.*, and the contract for fittings and furniture 750*l.*

South Molton.—The new market here has been opened. It has been erected at a cost of something over 10,000*l.*, of which 5,000*l.* have been raised by the sale of corporate property. The market adjoins the town hall, and is situate in the principal street. The site, purchased from the late Mr. J. E. Cutcliffe, cost 1,600*l.*, and the building contracts amount to 6,667*l.*; while the extras are estimated at 100*l.*; the architect's charges, 350*l.*; premiums for plans, 30*l.*; and the legal expenses, 1,393*l.* 6s. 6d.;—thus making a total of 10,140*l.* The building is in the Italian style of architecture, and the material brick and stone combined. Over the market is a large assembly-room. The market is flagged, at a cost exceeding 700*l.* Mr. W. F. Cross, of Exeter, was the architect; and Mr. J. Cock, jun., of South Molton, the builder. The sub-contractors were Mr. Horne, of Barnstaple (who executed the masonry), Mr. Willshire, of Barnstaple (the iron-work), and Wigery, of Southmolton (the glazing). The market is situate on an irregular piece of land, sloping towards the south. The ground has been raised so as to bring it nearly level with the front street, supported by walls. The extreme interior dimensions of the building are 320 feet long and 150 feet wide. The principal front is towards Broad-street, and almost entirely of Portland stone, the entrance being effected by means of three archways. Above the arches are the windows of the assembly-room. Above the side windows are circular ventilators, festooned with fruits and flowers. The whole is surmounted by a cornice and an open parapet of square balustrades. The roof is of wood and wrought iron, lighted from the top by skylights, supported by cast-iron ornamented columns, with brackets and girders; and divided into a nave 45 feet span; south aisle, 35 feet span; north aisle, 24 feet: the width of each is regulated by the form of the site. The height of the roof of the nave is 40 feet to the ridge, and is raised above the roofs of the aisles by a clerestory, filled with Hartley's patent glass in the louvre form. The walls are built of stone found in the locality, relieved with brick piers and courses. The dressings of the windows are also brick, to correspond with the rough-faced keystones of the arches, the openings being filled with rough glass louvres, except the windows of the south end, which have iron frames and plate-glass. The assembly-rooms are approached by a separate entrance in Broad-street, by an oak staircase. The room is 63 feet by 33 feet. The roof is formed by five circular ribs, springing from corbels, enriched by festoons of flowers carved in stone. The ceiling is of Parian cement. The walls are stuccoed with tinted grey.

Keswick.—The New Cumberland Union Bank, Keswick, has been opened for business, forming an ornamental addition to the street architecture of Keswick. It is built after the design of Mr. Eaglesfield, of Maryport. The masonry was done under the superintendence of Mr. J. Gibson, jun.; and the joinering by Mr. J. Crosthwaite, both of Keswick. The walls are of blue ashlar stone, faced with quoins and pilasters of white Tallentire freestone, supplied by Mr. H. Graves, of Aspatria. The entrance to the bank is from the main street, opposite Museum-square, the site of the old establishment. On the south-east side of the building premises are fitted up for a post-office. The bank, which is detached, occupies a frontage of about 44 feet, and is more than 50 feet deep. There is a raised causeway of flagging in front of the edifice.

COMPETITIONS.

Croydon New Union House Hospital, &c.—The designs submitted by Mr. John Berney, of Croydon, in a limited competition for these works, have been chosen by the Guardians. The buildings will be erected near the Croydon Cemetery.

Belclaroute (Jersey), Cricket.—Forty-one designs for this new edifice have been received from architects, and have been placed on view in the Fratery. The church will be constructed for the accommodation of 1,000 worshippers, the population of the proposed district being 4,500; and the cost of the building is intended to be 3,000*l.*, exclusive of fittings, school-house, and other expenses. The subscriptions amount to 2,126*l.*

STATUES AND MEMORIALS.

Baron Marochetti has received a commission to execute a statue of the Queen in bronze. It will be placed in the mausoleum at Frogmore, beside the statue of the Prince Consort.——Prince Alfred is at present giving sittings to Mr. John Steell, at his studio, Edinburgh, for a bust, to be placed in the College Library, uniform with that of the Prince of Wales in the High School.——A memorial stone, of white Carrara marble, is being erected in Addington Church, Surrey, to the memory of the late Archbishop of Canterbury.——A subscription, with a view to the erection of a memorial to the late Prince Consort in Pembrokeshire, Wales, has been commenced by the Mayor of Tenby. No sooner was the project made public than a considerable sum was realised.——The Macaulay memorial for Trinity College, Cambridge, is nearly finished by Mr. Woolner. The historian, says the *Athenæum*, is seated in his college gown, with a book in his hand, the fingers pressed into the open leaves, as if he had been collecting points in an argument. The attitude is graceful and the face noble. It has not been settled where this memorial shall stand.——A marble bust of the late Field Marshal Lord Seaton, executed by Mr. G. Adams, has been placed in the grand hall of the Senior United Service Club, Pall-mall. It stands upon a pedestal of Belgian red variegated marble, and bears an inscription in gold letters. The bust was presented to the club by Colonel the Hon. Francis Colborne, C.B., the field-marshal's second son.——Permission has been given by the Herefordshire magistrates for the erection of the statue of the late Sir George Cornewall Lewis, by Baron Marochetti, in front of the Shire Hall, at Hereford.——A proposition is mooted to form a memorial cairn to the late Duke of Athole, by the hands of his own people. The site mentioned is the shoulder of Craig-y-barns-hill, in the vicinity of Dunkeld.

NEWS FROM IRELAND.

The erection of the new cathedral at Cork is progressing rapidly. About 9,000*l.* have been raised towards defraying the cost of the building.

The new parochial schoolhouse at Dowpatrick is in progress of building, and will considerably improve that part of the town in which it will be situate. The contractor is bound to have it completed by May next. It is to be hoped that some effort will be made to erect a town-hall or assembly-room on the unsightly ruins which adjoin this schoolhouse, and which have been long an eye-sore in the very centre of the town. It has been said, that Mr. Ker, M.P., the lord of the manor, intends to erect, at his own expense, some ornamental buildings on the ruins alluded to. A town clock is very much required.

New works, according to the *Galway Vindicator*, are in progress at Lismany, the seat of Mr. Allan Pollok. The office, houses, stables, laundry, servants' apartments, graperies, &c., are on an extensive scale. The architect is Mr. James Franklin Kempster, the county surveyor. The contractor is Mr. P. Cody, of Laurencetown.

The subject of a new cemetery for Drumragh, Omagh, is being mooted, and Sir H. Bruce has been requested to give a portion of his lands to the parish for the purpose. The estimated cost is 500*l.* The Omagh Board of Guardians, so far as they are concerned, however, have decided against the outlay.

THE LEVERAGE OF TOOLS.

The question proposed by your correspondent "F. B. B.," p. 86, *ante*, can be answered by means of the investigations in the chapter on "Resistance to Torsion," in Fenwick's "Mechanics of Construction." Let us take the case of a steel borer, having a handle at right angles, so as to form a tool of the shape of the letter **T**. In the first place, the effect of any power applied at the handle, to twist the tool round, is directly proportional to the length of the handle. Secondly, the twisting force obtained at the lower end of the tool is directly proportional to the length of the tool, and inversely as the fourth power of its diameter. The increase of length and decrease of diameter are, however, limited by the power which the metal possesses of resistance to torsion; and this is ascertained by experiment only on different materials.

E. Wyndham Tarn, M.A.

BUILDERS' PRICES.

I have occasionally addressed a few lines to you on the inconsistencies of "Price-books." I now do so to elicit information on a very important subject in connexion with builders' prices. In "the good old times," when tradesmen received a fair remuneration for their work, and were honest enough to try to excel in their several departments, some uniform standard seems to have been adopted by the surveyors of the day, who appear to have been men intelligent in their callings, if, at the same time, as has been represented, they were given to indulgence in the good things of life, the order for dinner being the first important thing to be attended to on measuring day. But now, in these days of cutting contracts, the young architects are completely ignorant of the value or nature of the materials and workmanship they have to deal with. Contracts are taken haphazard: some may yield a profit of five per cent., and more no profit at all, excepting the successful individual may be clever enough to scamp his job without detection. But when extras come to be charged, by some sudden inspiration the builder finds he must charge prices that will yield him from twenty-five to fifty per cent. profit—"he really cannot afford to do it for less." If you remonstrate with him, "it is the usual rate of charge in the locality: Mr. So-and-so always allows it, and you could not think of cutting him down below a living profit." Now, as fashions change, and I am getting somewhat towards the stage of "the sere, the yellow leaf," my ideas may be behind the times, and it would be a gratification to know what might be considered a fair and *legal* profit on builders' work, and whether the same be applicable to all branches; or if each department is entitled to its separate standard. Also what is to be done in reference to discounts, *i.e.*, supposing the standard of profit to be fifteen per cent.,

and the tradesman is receiving a discount of thirty per cent. from the manufacturer's list: the terms of payment should also be named in connexion with the per-centage of profit. In contract work, the builder generally receives seventy to seventy-five per cent. as the work advances, which might be considered as the terms where extras were concerned; and if longer credit were taken, a proportionate scale should be adopted to suit the case. Another question also arises: should the per-centage be equalized over every item in the account? because I have seen an article in plumbers' day-bills charged 100 per cent. upon the cost, under the plea that a sufficient profit was not realized by the other portions of the account. As these very charges often lead to a *disputed account*, on what data must an arbitrator found his standard for a just and equitable arrangement?—his own idea of a fair equivalent, the prices that the tradesmen in the locality think well to charge, or some recognized legal standard? I need not say that no fixed standard could apply to any but first-class work. Unsound work and unseasoned materials must always be subject to the opinion of the surveyor; but even these would bear some proportion to the standard set up in his own mind in reference to sound work. Lastly, would the quantity have any effect on the price to be allowed, except where a large proportion of one description of work or material was supplied?

Z.

VENTILATING CEILINGS.

HAVING read your article on Hospitals, I beg to suggest whether the difficulty of ventilating the wards might not be overcome by doing away with the present plastered ceiling, and having one formed on the undermentioned plan.

The floor of upper ward to be carried on iron deck beams: allow a space of say 2 feet below the floor; then have a very light iron beam, with flanges: if the span be large, it would have to be attached by a light rod or two to the deck beam. On the flanges of the beam sheets of light perforated metal are to be placed, and the ceiling is complete.

Objections might be raised respecting its unsightly appearance; but, by fixing thin strips of metal, cut to any pattern, on the lower side of flanged beams, a very ornamental appearance might be given, and it would allow a wide field for colour.

The thin perforated metal being painted, and made in pieces of say 5 feet long, or to fit pattern, could be removed when they required cleaning, without, in any way, interfering with the ward; or duplicates could be used.

The way of getting the air would be by external iron gratings, with slopes rising to keep the air from striking down the walls: there would also be a moveable flap to each opening, so that it might be closed at pleasure.

The advantages of the above plan would be—

1st. Ventilation without draught.

2nd. Great cleanliness, it being quite impossible for vermin to live, being so continually disturbed.

3rd. Fire-proof.

4th. Gas and water-pipes could be got at.

FREDERICK ELTZE.

CITY THOROUGHFARES.

You did me the favour to notice, some time since, a suggestion of mine of an admirable opportunity that occurred (by the taking down of some houses) of continuing the line of Cannon-street from St. Paul's across to Eastcheap, and so on to the Tower; thereby doing away with a very awkward corner; opening up a very crowded thoroughfare, the traffic along which to the Docks is very considerable; and forming a handsome and commodious street throughout.

A chance of a more important improvement, which ought to be made in our much-encumbered City, presents itself now. Any one walking over London Bridge towards the City would remark that a church spire in Lombard-street, on one side, and the tower of St. Michael's, Cornhill, on the other, exactly mark out the line which King William-street should follow, if prolonged to Cornhill; while, on the other side, the tower of St. Michael's, as seen from Bishopsgate-street, shows how, by an easy bend, one of the finest approaches, and one much required, might be made to one of the best of our bridges with about the largest thoroughfare in the world.

A very considerable opening is now made in George-yard, and in that part of Lombard-street, for building a new club-house and other buildings; and such an opportunity for the commencement of this glorious improvement may never occur again.

I believe that it was the Great Duke of Wellington who first suggested this line when the new bridge was built; and it is a great reproach to the City that the suggestion has never been carried out, as nothing can be more paltry and unworthy of the site than the present miserable abrupt termination of that part of King William-street behind King William's statue. The necessity for relieving the overcrowding in Grace-church-street has long been allowed. The new City Club would be well placed in a handsome new street; and St. Michael's-alley, George-yard, and Three Kings-court are all open spaces on the line. For a *railway*, it would be cleared in a few weeks. Can nothing be done before fresh buildings are erected?

May railway companies disfigure our river and sweep away our houses by the thousand, and cut our poor City to pieces as they will; when, to make a much required and manifest improvement, such as a short piece of street or a small space for a decent view of our metropolitan cathedral, one is met by hosts of opponents, and the old winding lanes and crushing stoppages are to be endured, without a hope of redress, unless the public and the public press come to the rescue? In mercy help us to arrest the mania for dismembering our poor town by railways, while our street communication is utterly neglected. Help us, ere it be too late.

A CITIZEN.

THE CHANCEL.

"To be or not to be, that is the question?"

I SAID in my last letter that I did not wish to prolong my controversy with Mr. Elliott; but, as he has coolly denied my facts, I feel that my silence at this point might perhaps be misconstrued. It is not I, but Mr. Elliott, who is guilty of "raising a false issue." In his first letter he argued that we ought to cease building "*chancels*" in the ordinary acceptation of the word, and erect in their stead "chancel-platforms" for the minister,—such, I suppose, as the stage on which Mr. Spurgeon performs in the Metropolitan Tabernacle. He proclaimed to the whole world that he was in a position to *prove* that in the primitive churches the altar stood "in the midst of the people," without, and not within, the *cancelli* which formed the boundary of the *bema*; and challenged any one to give an instance earlier than the ninth century in which it was placed otherwise. I gave him half a dozen and more in my last. He says that in each of these examples the portions I speak of are "modern additions." I repeat, on the authority of an architect a hundred times better known to the world than Mr. John Elliott, that in every one of the cases I produced "the chancel and apse are *undoubtedly* contemporaneous with the rest of the church." He states further, that I have "nearly trebled the depth of the apse *or* chancel" (I said apse *and* chancel) "of St. Peter's, and almost doubled that of St. Maria Maggiore." If so, the fault lies with the architectural plans professedly drawn to scale, which I consulted. But even then the chancel would be large enough for my purpose,—larger than that of most Mediæval parish churches. The mere fact that seats for a greater number of clergy and a larger choir, have in some instances been inserted at a later period, is simply "*nihil ad rem.*" Mr. E. says it will "tend to clear my mind" if I remember that "the *cancelli* were simply *railings*;" and that though the altar was "surrounded by railings," it was not, therefore, "necessarily" on the bema. I was perfectly aware of the fact before Mr. E. informed me, and stated it in my first letter. But Mr. Elliott has undertaken to *prove* that the railings between the altar and the people, spoken of by Eusebius, *were not* the railings in front of the bema; and that the altar did *not* stand in the bema at all. I have challenged him to give his reasons,—to bring forward a single instance to prove this point. And what is the result? With all the self-complacency imaginable he answers, "I have again and again given this proof, in a shape no architect or antiquary can question, by pointing out that the seats of the presiding bishop and his fellow-presbyters were invariably at the extreme end of the apse" . . . . "and therefore (!) no altar could have stood on the platform between the ministers and the people." This is really too childish and ridiculous! After all the bombastic verbiage and arrogant self-assumption of his four lengthy letters, the only proof that Mr. E. has to offer, that the altar in primitive times stood "in the midst of the people," and not in the apse, is this,—that the clergy sat in the apse, and, therefore, the altar was not there.

The position of the seats for the bishop and clergy in the early churches was perfectly well known to every "architect and antiquary" before Mr. Elliott was born or thought of, though he seems to think he has made a discovery. I have admitted that proposition from first to last. What I want to know, and what your readers want to know, is, how can Mr. Elliott *prove* that which he has challenged the whole world to disprove, viz.; that the altar did *not* stand in the centre of the apse in front of the bishop's throne? How can he *prove* that it *did* stand in the middle of the nave, *outside* the *cancelli* of the bema? Absolutely not so much as the merest shadow of a proof can he bring, not a single fact or instance, in support of his new theories and strange assertions. I must say, Mr. Editor, I think he owes you and your readers an ample apology for the space he has occupied in your valuable columns with his "mountain in labour," for the "*mus*" that has resulted is "*ridiculus*" enough. His arguments, if they can be called so, are really scarcely worth refuting. The bishop's throne was usually quite elevated enough (I know an instance where it was raised *ten* steps above the floor of the bema), and the altar and cancelli quite low enough to admit of his being both seen and heard, though sitting behind the altar. The Orders of Council quoted by Mr. E. prove absolutely nothing, for they are, to say the least, quite as intelligible (I think most of your readers will agree with me, far more so) on the supposition that the altar stood within the bema, as they are on Mr. Elliott's. The decree of council of 567 simply permitted the laity to enter the chancel to communicate, instead of the elements being brought out as heretofore, and as is still the case in the Greek Church, and administered in the nave. It is only right to point out that in the sentence in which he speaks of the *cancelli* separating the sexes, the word "*table*" is gratuitously added by Mr. Elliott in place of "temple." As to his theory of connexion between the growing size of the chancel (to admit larger staffs of singers and clergy), and the development of the dogma of transubstantiation, it would be as easy to prove a similar connexion between that dogma and the gradual development of *church spires* since the ninth century. But I have done with a controversy which the utter inanimity of my opponent's arguments has already made me ashamed of having entered upon.

WILLIAM PURTON.

P.S. In most of the churches mentioned in my last the altar *does* stand, and therefore *could* have stood, and probably *did* stand at the first, in the centre of the bema, in front of the bishop's throne.

THEATRES.

THEATRES in England continue to be built just as ill-arranged behind the scenes as ever. You never find a stage thoroughly warmed in winter: you never find a theatre that is not like a well in the daytime—cold, windy, damp. It is in this respect that the Russian theatres are so excellent; the same temperature throughout, so that in winter-time the singers are at their ease during a day rehearsal; and not, as in England, in greatcoats, wrappers, and the like. The German theatres are also excellent for heating arrangement. At Munich, the walled-in stage, with passages outside, and the dressing-rooms opening thereon, is by far the best arrangement. The stage is thoroughly free from cold windy passages, and the heating apparatus is excellent. This subject deserves attention. When are we to have a really complete theatre—architecture and all good; a simple English Gothic building, expressing the old traditions of our Chaucer?

X. Y. Z.

HOLIDAYS FOR THE WORKERS.

I SEE it is the intention of the National Shakspeare Committee to endeavour to make the 23rd of April a general holiday. I hope they will succeed, for I believe that it is a step in the right direction,—and that we ought, in London especially, to have more days set apart, purposely for recreation. I believe, if we could only get a few holidays in the pleasantest part of the summer time,—when there are none at all, except, perhaps, Whitsuntide,—it would go a

long way towards diminishing the number of Sunday excursion trains. I do not wish to say anything as to whether the Sunday excursion in itself is right or wrong, but I know that it is a great scandal to many; and, I believe it would be far better if we could get a little fresh air now and then on working days and keep the Sundays for rest. I wish the church could shift Christmas and Easter into the summer for the benefit of us in London.

Would it not be possible, just for the sake of an experiment, for employers and their workmen to set apart some day in June or July for a general holiday? If any large number agreed to do so, the railway companies would be sure to run excursion trains in plenty. I would rather see the workmen agree to forego the day's pay altogether, for I am sure they would gain by it in the long run by increased health: those, however, who did not like to do this, might make up by working an extra hour or so for a few nights.

Perhaps I may be allowed to quote a few words from John Stuart Mill's "Political Economy," which bear a little on this subject, and which contain some good advice for us all. He says that,*

"Every real improvement in the character of the English, whether it consist in giving them higher aspirations, or only more numerous and better pleasures, must necessarily moderate the all-engrossing torment of their industrialism. There is no need, however, that it should diminish the strenuous and business-like application to the matter in hand which is found in the English workmen, and is their most valuable quality. The desirable medium is one which mankind have not often known how to hit, when they do labour, to do it as well as their might, and especially with all their mind; but to devote to labour for mere pecuniary gain, fewer hours in the day, fewer days in the year, and fewer years of life."

A London Workman.

FORMATION OF SCAFFOLDING.

Having come here lately from Glasgow, and being connected with the building trade, I was a good deal surprised at the manner that builders erect their scaffolding in this part of the kingdom, with poles and ropes.

Poles and ropes might be nearly done away with by having strong wooden or iron masts, placed 30 feet or 40 feet apart, and 100 feet high (if required), having iron grooves and rack-work fastened thereon for the purpose of supporting wire ropes and iron rods. These grooves, rods, and rack-work would be fixed to the masts or posts, at such heights as corresponded with the different flats, or stories; and on the chains and rods light carriages, on rails, would convey the building materials to the workmen.

Such scaffolding could be easily and cheaply put up and taken down; and, being much stronger than the present method, many valuable lives would be saved, and numerous accidents prevented. Robert Climie, C.E.

"CHELSEA WORKHOUSE ADDITIONS."

Sir,—Your last number contains a letter from one of the competing builders in this matter, and he has not adhered to the truth in stating that I have charged eleven three guineas for the quantities, as those sums were received by me and for my own use, but on behalf of the guardians of the poor, according to the advertisements inserted by their order in the *Builder*; and each builder was told at the time he applied for the quantities that the guardians would not return the money.

It is not unusual for public Boards to charge and retain an amount for the quantities. George C. Handford.

Books Received.

The Use and Preservation of Iron ("*Uso del Ferro e sua Conservazione Tradizioni ed Esperanze*;" *Raccolte dal Giuseppe Novi, Ufficiale Superiore d'Artiglieria al Riposo*). Naples, 1863.

Signor Joseph Novi, a retired officer of the artillery, has published a work on "The Use of Iron, and its Preservation. December, 1863. Acts of the Royal Institution of Naples," which deserves notice. Before France and England offered premiums for the invention which should best preserve iron ships from destruction, whether by insects or incrustation, this officer had directed his studies to this subject, reading carefully all the experiments which had been made, especially in America. Signor Novi begins from the beginning, enumerating what has been done from remote ages, whether by Jews, Egyptians, Phœnicians, Pelagians, Assyrians, Persians, Greeks, Romans, Danes, Germans, or Britons. The result of his observations is the belief that "asphalte, oils and essence of asphalte," were the predominant matters employed, and are the most efficient now, as is expressed in his concluding sentence:—"The future of iron, cast-iron, and steel, depends on the use of bitumen, naphtha, asphalte, and such like substances." We incline to his opinion, that engineers, mechanics, marines, soldiers, artists, agriculturists, and chemists, will gather from his researches practical knowledge of service. References are made to every author he has quoted, and serve to show his research.

Another great cognate commercial question has been the subject of lively discussion in the Italian Parliament, the extraction of iron and steel from the magnetic sands on the Italian shores: now that Bessemer's system has opened a grand prospect for the future, the subject becomes more important.

The Omnibus (a Neapolitan journal), of the 11th of January, has an article by the same Signor Novi, against the patent granted by the Italian government to Mr. Long, of Genoa, for his mode of "extracting iron and steel from sea sand," in utter disregard of the *Codice Napolitana*, 1826, and the *Codici Albertino*, 1859 (the laws especially relative to mineral productions). His argument is, that such patents should only be granted to an invention, or an introduction, hitherto unknown; whereas in this instance neither the one nor the other has occurred. The extraction of iron has long been practised in Naples and Ischia, especially, where much sand is found containing crystallized magnetic iron. In fact, so far back as 1845, Signor Salvi, proprietor of the iron foundry at Atripaldi, built furnaces especially for the casting of this sand, and Signor Novi himself at the establishment of Arms, at Torre Annuncinta, proved the value of the iron thus extracted, by the fact, that out of one hundred gun-barrels made therefrom, not one failed in proof.

* Book I., chap. 7, § 3.

VARIORUM.

Several of the serials this month present features of special interest to our more technical readers. The *Art Journal*, for example, commences with a paper by Professor Ansted on "Cyclopean Architecture in the Ionian Islands," illustrated with examples from Santa Maura; Cranea, Cephalonia (2); and Samos. The number has the usual allowance of excellent engravings, including one of "The Reading Girl."——In the *Social Science Review*, the whole of which of course concerns one section of our readers, there is an interesting paper on "Art amongst the Buddhists," founded on M. Barthélemy St. Hilaire's report on Mr. Hodgson's drawings given by him to the Institute of France.——*Fraser's Magazine*, under the head of "Public Works," makes an onslaught on the management of the Government Board of Works, and goes with those who consider that it should be under permanent management.——In the *Gentleman's Magazine* the "Notes on the Architecture of Ireland" are continued, and treat of Clonmacnoise, the place of the Seven Churches. The writer believes there is no stone building remaining there of any importance of a date prior to the eleventh century, the era in which, as he maintains, building in stone was revived in other countries. The writer is not disposed to accept any dates which would force the belief that Ireland was at that time in advance of other countries.

Miscellanea.

The Royal Gold Medal of Architecture.—M. Viollet-le-Duc is named to receive the next medal.

The Victoria Cross Gallery.—We understand that a gentleman of Leeds has purchased from Mr. Desanges all the pictures forming this gallery, and will keep them together as a collection illustrative of British valour.

Magazine for Girls.—Many will hear with pleasure, as we do, that Mrs. S. C. Hall has undertaken to conduct a Magazine for young ladies. Mrs. Hall's mind, as we happen to be informed, has been much directed to such a publication for some time past; and all who are acquainted with her will know how honestly, earnestly, and lovingly she will work in such a path. With the good literary and artistic aid Mrs. Hall may command, the intended new venture can scarcely fail to succeed.

Aston Park, Birmingham.—The town-council have agreed to purchase the park, as a place of recreation for the people of Birmingham, for 26,000*l*.

Proposed Sale of the "Auction Mart," London.—The company of proprietors to whom the well-known Auction Mart, by the Bank, belongs, are about to sell it. Written tenders are to be sent in on the 29th inst., and if a sum be offered equal to a reserved price placed under seal prior to the opening of the tenders, it will be accepted. The company was formed in 1808, to purchase land and erect suitable buildings for the purposes of a general auction mart. It will be instructive to compare the value of the land then with its value now.

Desecrations at Jerusalem.—The proceedings of M. de Saulcy in the "Tombs of the Kings," at Jerusalem, have excited considerable attention, and still greater indignation, among the Jews of the Holy Land. The desecrations with which the Frenchman is charged have altogether been denied; but according to the *Jewish Chronicle*, authentic news has reached London, placing the fact beyond all doubt. In a letter to the board of deputies, from the heads of the Jewish community of Jerusalem, these desecrations are minutely described.

The Workmen's Club Movement. An effort is being made to form a club in Clerkenwell. The Bethnal-green club is progressing: the incumbent of St. Matthias, Hare-street, the Rev. J. Colbourne, has given the use of his schoolrooms to the club, till a suitable house can be procured. Over fifty men having paid their first subscription, it was decided to open the club forthwith. The half-yearly *soirée* of the Holloway Club has been held, when an address was delivered by the Rev. H. Solly, secretary to the Central Union. A conference of London secretaries (the first held) has taken place at the Central Offices, 150, Strand, when the following metropolitan clubs were represented: Battersea (forming), St. George's Mission, Shoreditch, Holloway, Duck-lane, Westminster, Homerton, Forest-hill, Holborn (forming), Soho, Brentford, Kent-street, Borough (forming), Gravel-lane, Southwark, Kentish Town, Clerkenwell (forming), Wandsworth, Bishopsgate, St. Martin's-in-the-Fields, Victoria Docks, and Hare-street, Bethnal-green.

The Extinction of Fires in the Metropolis. At the Inventors' Institute, Conduit-street, Regent-street, Mr. C. B. King, C.E., has read a paper before a numerous audience on "The Means and Appliances adopted for the Suppression and Extinction of Fires, and a Review of the Engines at present in Use." Mr. King considered that the chief cause of fires was carelessness on the part of servants. The fact that large fires were inextinguishable was in some way accounted for in science. The water thrown upon them became disintegrated [decomposed?] Mr. King considered the steam fire-engines best for all practical purposes. The most efficacious mode of extinguishing fires, however, was without engines. In Liverpool, Manchester, Leeds, and several other large towns, a high pressure was constantly kept upon the fire-mains, which enabled the water to be projected a sufficient height, without the use of fire-engines. Were such a system introduced in London, it would go far towards entirely superseding the use of fire-engines.

Grove's Gas Battery.—A theoretical consideration of the arrangements and action of this battery leads Mr. T. A. Malone, late director of the laboratory of the London Institution, to suggest, in the *Philosophical Magazine* for January, 1864, that *antecedent static action is necessary to produce true voltaic phenomena*. The gas battery of Mr. Grove consists of a series of cells, each containing two tubes of glass sealed at one end, and in which are inserted, by fusion, long narrow platinum plates and attaching wires, the plates reaching a little below the bottom of the tubes. These tubes are partly immersed, by means of a ground collar, into a square three-necked Woulfe's bottle, the centre hole between the tube-holes being stoppered. The tubes are usually two-thirds filled, the one with hydrogen, two volumes,—the other with oxygen, one volume—the bottle and remaining part of the tube holding the usual dilute sulphuric acid to complete the circuit. The platinum is, in order to promote contact with the respective gases and the liquid, covered with platinum-black. Metallic contact between the tubes, or to the galvanometer, is made by mercury cups attached to the platinum wires.

The Permanent Exhibition Building, Paris.—Bills have just been posted in Paris announcing the sale of the Palace of the Permanent Exhibition at Auteuil. The upset price is fixed at 2,250,000f. The affairs of the company are about to be wound up. This a bad ending before beginning.

The Chatham Surveyorship.—The Chatham Board of Health had eighteen applications for the office of surveyor to the Board, according to the local *News*: the applicants were mostly from Chatham, Rochester, and Brompton. The list was reduced to two, Mr. Greenstreet, of Walworth, and Mr. Blackader, of Gillingham; and ultimately Mr. Greenstreet was unanimously elected.

Lewal's Patent Heating and Ventilating Apparatus.—This apparatus has been recently fitted up in the new Police-station at Blackwood, Monmouth, by Mr. H. B. Sketch, builder, of Blaina, and we are told that the presiding magistrates recognize in it a great improvement upon ordinary methods of heating and ventilation. The apparatus consists of prismatic tubes, is placed at the back of the grate, and has connected with it pipes for conducting the warm air generated in the tubes into the room. These pipes can also be conveyed to other parts of the building. If there be no possibility of the admitted air being *burnt* in its passage through the tubes, the arrangement seems a good one. The constant admission and circulation in the apartment of large quantities of pure warm air is, of course, a great advantage.

Proposed "Junior Athenæum Club."—The number of the candidates seeking to enter the Athenæum Club, and who have to wait some seven or eight years for ballot, has led to a proposition for the establishment of a new Club upon a similar basis. The promoters announce that the new Club is not projected in a spirit of rivalry to the Athenæum, "but to meet the growing wants of literature, science, and art; and with that view they will most cordially entertain the candidature of those gentlemen whose names may have been, probably for many years, upon the waiting list of the Athenæum." A very strong committee, we are told, is in course of formation, and about 200 applications have been received already from would-be members. Letters may be addressed to Mr. G. R. Wright, F.S.A., the secretary *pro tem.*, at the committee-room of the Club, St. James's Hall, Regent-street, London.

How Cities grow in America.—When the first sod of the Union Pacific Railway, for completing railway communication from the Atlantic to the Pacific, was dug last week at Omaha city, a citizen gave the assemblage an account of his arrival at that city, or rather at the site, in October, 1854. "Along the narrow path," he said, "cut by some stalwart men through the tall, rank prairie grass, I wended my way in search of the post-office. At length I found an old pioneer seated apparently in solitary rumination upon a piece of hewn timber, and inquired of him for the post-office? He replied that he was the post-master, and would examine the office for my letters. Thereupon he removed from his head a hat, to say the least of it, somewhat veteran in appearance, and drew from its cavernous depths the coveted letters. To-day, our postal service, sheltered by a costly edifice, spreads its Briarean arms towards north, south, east, and west," &c. Omaha city is now the capital of Nebraska.

The Pneumatic Despatch.—It appears from the report of the directors of the Pneumatic Despatch Company that various difficulties and delays have arisen from a combined opposition of tenants on the Bedford estate, and that, to avoid a protracted litigation, the main works from Euston-square to the City are being carried by the more circuitous route of Tottenham-court-road, about 800 feet of tube having been already laid down between Francis and University streets. Other portions of the line are being commenced in Broad-street, and the tube will now be laid at the rate of fifty yards a day. The commissioners of sewers wish the company to re-consider their route between Fleet-valley and the Post-office, suggesting the desirability of carrying the tube through the grounds of Christ's Hospital, to avoid the obstruction to traffic in Newgate-street. The branch line from Euston station to the district post-office in Eversholt-street continues in good repair, and works satisfactorily. About 4,500 trains have been despatched through the tube during the past half-year with perfect regularity, and the wear and tear has proved merely nominal.

The Wesleyan Jubilee.—The Wesleyans of the London district have commenced the celebration of the jubilee of their Foreign Missionary Society. The sums already given or promised to the jubilee building fund have reached 105,000*l.*, and the committee are confident that not less than 150,000*l.* will be ultimately raised.

Discoveries at Pompeii.—Among the articles recently discovered at Pompeii, says the *Chronique des Arts*, is a small head of Juno, in silver, of exquisite workmanship; also the body, in silver, but broken; a bridle-bit in bronze; a lamp in the same metal, complete, with cover, suspending chain, and extinguisher; a patera; a large and handsome vase, with the handles terminated by winged genii holding a cornucopia; other small vases in bronze; and a seal in that metal, bearing the name of the master of the house in which the articles were found,—Lucio Cornelio Diadumeno.

The Stained Glass Exhibition, South Kensington Museum.—All the space is appropriated excepting one very large opening, which affords a good opportunity for the exhibition of a great window for a cathedral, should such be going on in any of the studios. It is to be hoped that our artists in glass, taking the unmistakeable hint given by, amongst others, those who are directing the decoration of St. Paul's, and have thought it necessary to go abroad for the painted glass required, will show what they really can do.

Society for the Encouragement of the Fine Arts.—The opening lecture of the present session was delivered before the members of this society, at their rooms in Conduit-street, by Mr. James Dafforne, who took for his subject, "British Art, Past and Present." The lecturer briefly reviewed the growth and development of architecture, sculpture, and painting, as evidenced in the works of the most eminent men who have contributed to make the English school what it now is. While according full justice to what appeared worthy of commendation, he condemned much that was done in the present day, considering that the injudicious patronage too commonly bestowed upon art of every kind, and the false tastes which prevailed, are not calculated to exalt the fine arts to the high position they might reach under more discriminating encouragement. The lecture was listened to with great attention by a numerous audience. Mr. Dafforne is doing good service by his lectures.

Report to City Commission of Sewers.—Mr. William Haywood, C.E., the engineer and surveyor to the Commission, has reported for the past year on the works executed for the Commission. The report states, under the head of improvements, that freeholds in Great Tower-street have been purchased, for widening the thoroughfare between Mark-lane and Tower-hill, and frontages in Upper Thames-street, and in Gracechurch-street and elsewhere, arranged to be set back. Negotiations are pending as to purchase of properties in Newgate-street and Little Knight Rider-street, Threadneedle-street, St. Martin's-le-Grand, and St. Paul's-churchyard, for widening Church-passage, Gresham-street, and Dowgate-hill. The sanction of the Commission had been asked, but withheld, for the laying down of a pneumatic despatch-pipe, at a very great depth, through Holborn, Skinner-street, and Newgate-street, to the Post-office, and an application to Parliament by the company is anticipated. The street gas-lighting is satisfactory, and the carburation useful when a proper supply of naphtha is afforded.

Ecclesiological Society. — A committee meeting was held at Arklow House, on December 16; present, Mr. A. J. B. Beresford Hope, the president, in the chair. Designs for various churches were submitted by their architects, including Mr. Slater's designs for a cheap church at Belfast, and for adding a low pyramidal capping to the tower of Sheen Church, Staffordshire; Mr. St. Aubyn's design for a new parsonage at Devonport, and for a lichgate to a churchyard at St. Michael's Mount, Cornwall; designs by Mr. Buckeridge, for the chapel, &c., of the hospital or priory of the Holy Trinity, Ascot, Berks, for a new church at Egutpoora, in the diocese of Bombay, for the restoration of Mursley Church, Bucks, and Streatley Church, Berks, and for a new probate registry lately built at Oxford. A curious collection of bell emblems and inscriptions, made during the course of many years by Mr. John Mears, a workman in the employ of Messrs. Mears, of Whitechapel, was submitted. The committee much wished that so interesting a series could be published.

New Prisons in Glamorganshire, Wales.—The total cost of the new prisons in Glamorganshire was 87,087*l.*, exclusive of architect's commission and some other expenses. The additions to the county gaol cost 40,766*l.*, and the new buildings of the House of Correction cost 41,807*l.*

Coating of Ships with Glass.—By direction of the Admiralty, experiments, which are stated to be highly satisfactory, have been carried out at Woolwich dockyard to ascertain the practicability of coating the bottom of iron ships on a plan invented by Mr. Leatch, which consists in coating the iron surface with gutta-percha or other cement, and on this soft material to fasten sheets of glass about a quarter of an inch thick. The glass is previously bent to the shape of the ship, and pierced for the reception of the screw or bolts, the apertures being lined with a soft adhesive composition, which prevents the fastenings from coming into immediate contact with the glass.

Substitute for Gutta Percha. — At a late meeting of the French Academy of Sciences, M. Serres gave an account of the *Valata*, a shrub which abounds in Guiana, and affords a juice which he asserts is superior, for many purposes, to gutta percha, but especially as an insulating material for enveloping telegraphic wires. The milk or juice is drinkable, and used by the natives with coffee. It coagulates quickly when exposed to the air, and almost immediatley when precipitated by alcohol, which also dissolves the resin of the *Valata* juice. All the articles made with gutta-percha can be made with the sap of the *Valata*, and it has no disagreeable smell. When worked up it becomes as supple as cloth, and more flexible than gutta-percha. M. Serres exhibited a number of articles manufactured of *Valata* milk. Up to the present time it seems, from M. Serres's account, not to have become an article of commercial export.

Capital expended on Railways.—The capital expended in this country on railways to the present time has been upwards of three hundred and eighty-five millions sterling, or nearly half the national debt. This amount has been devoted to the construction of eleven thousand five hundred miles of railway in the British Islands, which are now open for traffic. The works executed in connexion with these undertakings have been of extraordinary magnitude. Navigable rivers, and even arms of the sea, have been crossed over; hills have been pierced by tunnels, and viaducts, embankments, and cuttings made in all directions. All this has been accomplished within the life-time of a single generation of men, who have not only executed the work, but provided the means out of their private resources, without any assistance whatever from the funds of the State. In a word, the railway system of England has been the spontaneous out-growth of the native industry, energy, and enterprise of its people.—*Railway News.*

Railway Matters.—The traffic receipts of the railways in the United Kingdom for the week ending January 22nd, 1864, upon a mileage of 11,083, amount to 532,519*l.*, being equal to 48*l.* 1s. per mile. For the corresponding week of last year the receipts were 490,755*l.*; the number of miles open, 10,712, or 45*l.* 16s. per mile. On the lines having termini in the metropolis the increase has been—on Great Eastern, 1,417*l.*; Great Northern, 4,805*l.*; Great Western, 3,896*l.*; London, Chatham, and Dover, 1,334*l.*; London and North-Western, 8,933*l.*; London and South-Western, 544*l.*; Metropolitan Extension (London, Chatham, and Dover), 620*l.*; on the Midland, 4,272*l.*; North London, 132*l.*; South-Eastern, 546*l.* On the metropolitan lines there is a decrease upon the Blackwall of 48*l.*, and on the London and Brighton of 1,483*l.*——Among the projects of the year is a scheme for sending a railway through the Thames Tunnel. The scheme is designated "The East London Railway," and Mr. William Hawes, chairman of the Thames Tunnel Company, is also its chairman. The intended line will proceed from a station close behind the Bank of England, across London-wall, Bishopsgate-street, Whitechapel-road, under the London and Blackwall Railway and Ratcliff-highway; thence in a deep tunnel under the eastern entrance to London Docks, and so on to the Thames Tunnel, through which it will pass southwards to form junctions with the South-Eastern and Brighton Railways. There will be about two miles of tunnelling under streets and docks; yet the estimate is only two millions.

Value of City Property.—It is stated that the premises occupied by the Colonial Life Office, in Lombard-street, have just been sold for 30,000*l.*, the lease having about seventy years to run at a rent of 500*l.* a year. The area occupied is about 1,000 feet.

Projected New Railway over the Pyrenees. In the Spanish Cortes Signor Carriguiri has brought in a bill for the construction of a railway from Pampeluna to Eguy, with prolongation over the Pyrenees to Bayonne, in France. The proposition was referred to a committee. This newly projected railway, according to the *Railway News*, is to pass over the celebrated valley of Roncesvalles — in French, Roncevaux — where the rear-guard of Charlemagne's army, under Roland, was defeated and destroyed in 778. There is to be a station at this place.

A New Ventilating Hat.—A most simple and complete ventilating hat, and which is applicable to helmets and other head coverings, can be easily and cheaply constructed, by merely perforating the hard and stiff inside body of the hat, after the manner of perforating the paper used for postage and receipt stamps. By the principle on which the proposed hat would be ventilated, the head would always be kept cool and comfortable, conducing to the general health of the body, preventing premature baldness and loss of hair.—B. C.

Recreation Grounds for Derby.—A public meeting, convened by the Mayor (in compliance with a requisition presented to him), has been held in the Town-hall, Derby, "to take into consideration the desirability of recreation-grounds being provided, both on the north and south sides of the borough, for the free use of the inhabitants, and for proposing a memorial to the Corporation on this important subject." There was a good attendance, a large number of the working classes being present. Appropriate resolutions promotive of the object in view were unanimously passed, and a memorial prepared and agreed to.

Lecture on Lead for Working Men.—Dr. Percy has been lecturing on metallurgy at the Royal School of Mines, Jermyn-street. In lecturing on lead, he remarked that if lead is heated it tarnishes, which is due to the action of oxygen on the metal. If we raise the temperature to a low red-heat, it is converted into a yellow powder, known as litharge. If heated further, it passes into the state of a higher oxide, which is red-lead. The oxides may be easily reduced to the metallic state by being heated along with carbon. The carbon burns at the expense of the oxygen. The lecturer now alluded to lead poisoning, and suggested a remedy in the use of beer slightly acidulated with sulphuric acid, which converts the soluble oxide into the insoluble sulphate, thereby preventing absorption. The principal ore from which lead is obtained is the sulphide known as galena.

Accidents to Person and Property. — At Hanley, a builder has been killed by the giving way of a scaffold-plank while removing the scaffolding from a new house which he had been erecting in Richmond-place. A coroner's jury returned a verdict of "Accidental death."—— At Dereham, near the railway station, one half of a large malt-house has fallen. It contained nearly 600 coombs of malt and barley. Settlement of the soil is blamed, but the materials used in the building are thought to have been insufficient. The damage is estimated at 1,000*l.* ——Some serious accidents have occurred at the military excavations near Newpassage-hill, Devonport, from stones during blasting, thrown to a distance of 200 yards. Neglect of public warning is attributed to the soldiery.——In the Liskeard County-court the other day, a heavy iron chandelier broke from the ceiling while an official was trying to turn it round to light it. Fortunately, no one was below it at the time. —— A serious accident has occurred at Birkenhead Docks. The gates leading to the northern tunnel had only opened a short distance, when the force of the water rushing from the higher level of the Great Float tore the gates from their massive iron fastenings as if the latter were so many pieces of packthread, snapped the chains and hawsers which had been added by Mr. Lyster, the dock engineer, for additional safety, and carried away the granite masonry, which chipped like glass. The overwhelming force of the water carried the wrecks of the gates, machinery, and masonry into the large domed chamber, from which it will be difficult to recover them.

The Law Life Assurance Society.—From the printed statement of accounts for last year of this Society, which was founded in 1823, we extract the following items:—Assurance fund, at 31st December, 1862, 4,301,210*l.*; at 31st December, 1863, 4,435,440*l.*: new premiums received 31st December, 1863, under 228 policies, assuring 308,760*l.* — viz., 12,736*l.*; renewal premiums, 283,634*l.*; interest on investments of fund, 154,874*l.* Disbursements: claims upon death under 201 policies, 31st December, 1863, in sums assured, 210,233*l.*; in bonuses, 64,527*l.*; total, 274,760*l.*: for surrender of policies and bonuses, 14,103*l.*: income-tax, 5,606*l.*: commissions on premiums, amounting to 296,371*l.* received, 12,368*l.*: directors' fees, 3,000*l.*; charges of management, 7,176*l.*

The Potters' New Drying Chamber.—Simple and efficient drying-rooms have been recently introduced at the works of Messrs. Minton & Co., Stoke, and Messrs. L. Elliot & Son, Dalehall, which entirely remove all the hitherto attendant evils of the drying process on the health of the workmen and boys, and at the same time facilitate the operation and economise heat. The principle of these plans is a rotating cylinder, which in the one case is placed vertically, in the other horizontally, both fitted with shelves, and enclosed in a chamber furnished with flues, so that a uniform heat is maintained at all parts. The cylinder is subdivided into several sections, and is easily turned as required by the hand of the mould-runner: each of these is filled in rotation with the greatest facility, through an aperture for the purpose, and with very little escape of heat.

The Profits on Gas.—By a Parliamentary return quoted by the *Journal of the Society of Arts*, it appears that the metropolitan gas companies paid dividends in 1862 as follows:—The Chartered paid dividends at the rate of 9 and 10 per cent., including back dividends at 1 per cent. per annum for the half-year to Christmas, 1856; the City of London, dividends at 9 and 4 per cent., with a balance of 658*l.*; the Commercial, 30,513*l.* on a capital stock of 322,195*l.* (less sums remaining outstanding); the Equitable paid dividends at the rate of 11, 14½, 14, and 10 per cent. (less sums remaining outstanding), with a balance of 396*l.*; the Great Central dividends at the rate of 6 and 8 per cent. (less sums remaining outstanding), with a balance of 18,445*l.*; the Imperial at the rate of 10 per cent., with a balance of 58,500*l.*; the Independent at the rate of 10 per cent., with one year's back dividend (1,500*l.*) and a balance of 3,548*l.*; the London paid 36,827*l.* on 548,843*l.* (less sums remaining outstanding); the Phœnix paid 10 per cent., with 8,190*l.* dividend arrears for 1856, with a balance of 930*l.*; the Ratcliffe dividend was 8*l.* 15s. per cent., without a balance; the South Metropolitan, 10 per cent., with a balance of 10,369; the Surrey Consumers', 10 per cent., with a balance of 4,047*l.*; and the Western, 10 per cent., with 5,285*l.* "towards back dividends of less than 10 per cent."

The Metropolitan Improvements.—Between the Railway Companies and the Board of Works there will within the next five years be carried out in the metropolitan districts alone a greater variety of the most stupendous engineering works than any other capital or country in the world can show. The Main Drainage and the Thames Embankments are in themselves achievements which from their cost, difficulty, and usefulness would suffice to crown the fame of any capital. The Holborn Valley Viaduct will be a gigantic work; the extension of the underground railway into Finsbury another; the Charing-cross bridge is no ordinary specimen of ironwork; that for the railway into Cannon-street will, it is said, equal it. If Mr. Fowler carries out his high-level bridge at Limehouse, visitors by the river will enter London under an iron gateway, compared to which that at Menai will be an ordinary structure; while, further on, the railway at Blackfriars will span the river with a bridge which, from its size and strength, the solidity of its workmanship, and the rapidity of its construction, is long likely to be regarded with wonder. When all these great works are finished, it is to be hoped the next will be a project of adequate magnitude for a constant supply of pure water to the metropolis,—some such work as that by which Glasgow has already provided itself with pure water from the highland lochs. Relatively speaking, the supply of London from the Welsh highlands would be no greater or more difficult or costly work than Glasgow has already done.

The Penydarren Iron Works at Merthyr Tydvil.—These works have been reopened with great rejoicing, after having stopped working for five years. The present proprietor (Mr. Davies) once worked in the Penydarren Works himself, for 4*d.* a day.

Steel Ships and Steel Shot. — Mr. Henry Bessemer states that two ships are being built in foreign waters entirely of Bessemer steel, and that the plates for a merchant vessel to be built in England have been ordered. Thousands of Bessemer steel projectiles are now being made for Russia, and other orders for steel shots have been given to the extent of 120,000*l.* in value. "Have we," he says, "a single ship afloat that can keep out these simple round steel shot fired from a common smooth-bored gun, if ever directed against us?"

Westminster Palace Hotel Company. — At the thirteenth ordinary half-yearly meeting of this company the report stated that the gross receipts for the half-year had been 12,872*l.* 18s. 1d., and the expenditure 9,660*l.* 10s. 9d., leaving as net profit 3,212*l.* 7s. 4d., which, after deducting 734*l.* 3s. 2d. for interest on debenture loans, 28*l.* 10s. 9d. loss on sale of Madras railway stock, and carrying 941*l.* 19s. 1d. to the reserve fund, will, with the amount carried over after paying the last dividend, leave available for present dividend the sum of 2,172*l.* 3s. 1d. The directors, therefore, recommend a dividend at the rate of three per cent. per annum, which would leave 222*l.* 3s. 1d. to be carried to next dividend. This dividend, added to that of the previous half-year, will make 5½ per cent. dividend for the whole year. The directors regret to have to announce that although there is a decrease in the expenditure, there is a falling off in the receipts to the extent of 5,516*l.* 3s. 10*d.*, as compared with the corresponding six months ending December 31, 1862. The business, however, at the present time is again improving.

TENDERS.

For new shop-front at Great Malvern, for the proprietor of "Nott's Malvern Relish." Messrs. Elmslie, Francy, & Haddon, architects. —

Edards	£143	0	0
McCann & Everal	125	0	0
Allen	114	0	0
Inwood (accepted)	113	18	0

For preaching-hall, at Notting-hill. Mr. Tarrin architect. The quantities by Mr. Eppy :—

Fish	£1,990	0	0
Dove	1,975	0	0
Cowland	1,966	7	0
Higgs	1,959	0	0
Myers & Son	1,952	0	0
Richards	1,916	3	0
Saunders	1,899	0	0
Rudkin	1,845	0	0
Scrivener & White	1,748	0	0

For the erection of a residence at Sidmouth, Devon, for Mr. L. H. Braham. Mr. W. F. Cross, architect :—

Butler & Turner	£1,387	7	3½
Hill	1,200	0	0
Gosling	1,000	0	0
Crabbe	993	0	0
Manley	960	0	0

For alterations and additions to Caldy Manor, the residence of Mr. Richard Barton. W. & J. Hay, architects. Quantities supplied :—

Harkness & Dempster	£2,728	0	0
Thomas	2,564	0	0
Nelson	2,495	0	0
Westmorland	2,423	0	0
Nott	2,350	0	0
Comer	2,205	0	0
Barker (accepted)	2,178	0	0

For three houses, for Mr. Charles Akins, Spitalfields. Mr. Reddall, Architect :—

Pritchard	£1,850	0	0
Larke	1,847	0	0
Scott	1,796	0	0
Turner	1,769	0	0
Ashby & Sons	1,731	0	0
Macers	1,693	0	0
Case	1,470	0	0

For the vestry-hall and offices of St. Mary, Newington. Mr. Henry Jarvis, architect :—

Mayers	£8,499	0	0
Kelly	8,189	0	0
King & Son	7,945	0	0
Rudkin	7,825	0	0
Scrivener & White	7,816	0	0
Simmonds	7,789	0	0
Robinson	7,785	0	0
Hill & Keddle	7,735	0	0
Johnson	7,687	0	0
Sims & Martyn	7,485	0	0
Kent	7,330	0	0
Myers & Son	7,242	0	0
Howe	7,200	0	0
Harding	7,190	0	0
Humphries & Co.	6,876	0	0

For additional buildings to Pitt Press, Cambridge. Mr. W. M. Fawcett, architect :—

Smith & Co.	£1,656	0	0
Bradwell	1,220	0	0
Attack	1,158	0	0
Bell & Son	1,045	0	0
Gray & Co.	936	0	0

For the erection of a residence, for Mr. T. C. Tothill, Topsham, Devon. Mr. W. F. Cross, architect :—

Grant	£1,160	0	0
Hill	1,155	0	0
Periam	1,060	0	0
Manley	974	0	0
Phillips	927	0	0
Crabbe	889	0	0

For new distillery, Victoria-street, Westminster, for Messrs. Joseph & John Vickers & Co. Messrs. William Mayhew & Calder, architects :—

Excavations.

Reddin (accepted)	£1,277	0	0

Accepted for alterations at the Old Harrow, Borough-market, for Mr. Corbett. Messrs. William J. Mayhew & Calder, architects :—

Hyde (Builder)	£240	0	0
Warne (Pewterer)	£54	10	0
Green & Co. (Bar-fitters)	£62	10	0
Comyn, Ching, & Co. (Gas-fitters)	£35	0	0

For the erection of three warehouses, in Milk-street, City, for Mr. William Vivian. Tillott & Chamberlain, architects. Quantities supplied :—

Turner & Sons	£5,629	0	0
Fish	5,190	0	0
Patrick & Son	5,150	0	0
Nicholson & Son	5,100	0	0
Hill & Keddall	4,989	0	0
Piper & Wheeler	4,958	0	0
Ashby & Sons	4,900	0	0
Brass	4,889	0	0
Myers & Sons	4,869	0	0
Cannon (accepted)	4,706	0	0

For an addition to Melrose Hall, Putney Heath, for the Royal Hospital for Incurables. Mr. W. P. Griffith, architect :—

	Portland Stone	Hoard. Dressings.
Mansfield	£9,780 ... £385	... £48
Lawrence	9,422 ... 490	... 35
Browne & Robinson	9,248 ... 599	... 20
Brass	8,886 ... 538	... 20
Foster	8,390 ... —	... 50
Adamson	8,335 ... 800	... 36
Bird (accepted)	8,250 ... 710	... 35

[We are asked to insert the above in lieu of a list that appeared in our last, and comply, though contrary to our custom.]

TO CORRESPONDENTS.

Leeds New Infirmary.—We shall commence next week complete illustration of this building, about to be erected from the designs of Mr. G. G. Scott, R.A.

"Going Along" will be continued in our next number.

Mr. H.—E. R. R.—C. N. A. (shall appear.—Printers (must look to published accounts).—J. S.—Inquirer (the matter is perfectly clear, and wants no comment. Before *ground-rents* can be sold they must exist; the land must be let).—W. H.—G. W.—A Young Architect.—L.—E. R. R.—A. J. C.—A Young Architect (must look to the code of prices).—W. M. F.

We are compelled to decline pointing out books and giving addresses.

All statements of facts, lists of tenders, &c., must be accompanied by the name and address of the sender; not necessarily for publication.

TO SUBSCRIBERS.

NOW READY, and may be had at the Office, the 21st Vol. of "The Builder" (bound), for the year 1863, price One Guinea.

CLOTH CASES for binding the Numbers, price Two Shillings and Nine-pence. It is necessary to state, when ordering these, whether the Advertisements are, or are not, to be bound with the Volume.

A COLOURED TITLE-PAGE Gratis.

SUBSCRIBERS' VOLUMES will be bound on being sent to the Office, at a cost of Four Shillings each.

[ADVERTISEMENTS.]

HOROLOGICAL SCIENCE. —"Here are arranged a fine selection of watches manufactured by him on the latest and most approved principles of horological science." — *Daily News*, July 1, 1862. Chronometer, duplex, lever, horizontal, repeaters, centre seconds, keyless, split seconds, and every description of watch, adapted to all climates. Benson's Illustrated Pamphlet on Watches (free for two stamps) contains a short history of watch-making, with prices from 3 to 200 guineas each. It acts as a guide in the purchase of a watch, and enables those who live in any part of the world to select a watch, and have it sent safe by post. Prize Medal and Honourable Mention, Classes 33 and 15.—J. W. Benson, 33 & 34, Ludgate-hill, London. Established 1749. Watch and Clock Maker by Special Warrant of Appointment to H.R.H. the Prince of Wales.

HEATON, BUTLER, & BAYNE, STAINED GLASS WORKS, removing to New King-street, Covent-garden, W.C. GLASS and WALL PAINTINGS, and incised Stonework, for Churches and Dwellings.

ADVERTISEMENTS.

THE QUARTERLY REVIEW, No. CCXXIX. is published THIS DAY.

JOHN MURRAY, Albemarle-street.

THE ART JOURNAL (price 2s. 6d. monthly). The February Number contains the following Line Engravings :—"Purity," by H. Bourne, after H. O'Neil, A.R.A.; "The Battle of Trafalgar," by W. Miller, after J. M. W. Turner, R.A. in the Hall of Greenwich Hospital; "The Reading Girl," by W. Reffe, from the Statue by P. Magni. The literary contributions include :—"Cyclopean Architecture in the Ionian Islands," by Professor Ansted, illustrated; "Dante's 'L'Inferno,'" illustrated; "On the Preservation of Pictures painted in Oil Colours," by J. B. Pyne; "The Arundel Society"; "Mr. J. D. Harding: a Biography"; "British Artists: their Style and Character," by J. Dafforne, illustrated; "Almanac of the Month," from Designs by W. Harvey, illustrated; "Art-Work in February," by the Rev. J. G. Wood, M.A.; "Portrait Painting in England," by Peter Cunningham, F.S.A.; "The Scottish School of Art"; "Gold Casket presented to H.R.H. the Prince of Wales," illustrated; "The 'Casket' Portrait"; "Sacred Poetry," illustrated; "Robinson Crusoe," illustrated; "Thorwaldsen's Sculptures"; "History of Caricature and of Grotesque in Art," by T. Wright, M.A. F.S.A., illustrated; "Jerusalem and the Holy Land"; "Another Blow for Life"; "Aluminium Bronze"; "Sir Stafford Northcote on Schools of Art," &c. &c.

London : JAMES S. VIRTUE, 26, Ivy-lane.

THE ADVANCE OF SCIENCE.

New Volume—Just ready, for 1864, with Portrait of Sir William Armstrong, and vignette of the 600-pounder Armstrong Gun, fcap 8s. cloth (postage 4d.),

THE YEAR-BOOK of FACTS in SCIENCE and ART, exhibiting the most important Discoveries and Improvements of the past year in Mechanics and the Useful Arts; Natural Philosophy; Electricity; Chemistry; Zoology and Botany; Geology and Mineralogy; Meteorology and Astronomy, &c.

By JOHN TIMBS, F.S.A., author of "Curiosities of Science," &c.

N.B. Sets of the work from 1861 to 1864, 3s. each, together with the Extra Volume, "Year-Book of Facts in the International Exhibition of 1862," price 6s. will be forwarded, post free, for 25s.

London : LOCKWOOD & CO. 7, Stationers' Hall Court, E.C.

NEW EDITION OF MISS NIGHTINGALE'S WORK ON HOSPITALS.

Just published, in post 4to. with Thirteen Plans, price 18s.

NOTES on HOSPITALS.

By FLORENCE NIGHTINGALE.

Third Edition, enlarged and for the most part re-written.

London : LONGMAN, GREEN, & CO. Paternoster-row.

GALBRAITH AND HAUGHTON'S SCIENTIFIC MANUAL.

Now ready, fcp. 8vo. with Thirty eight Woodcuts, price 7s. 6d. cloth,

MANUAL of the METALLOIDS.

By JAMES APJOHN, M.D.

Being the Third of a New Series of Manuals of the Experimental and Natural Sciences; edited by the Rev. J. A. GALBRAITH, M.A. and the Rev. S. HAUGHTON, M.D. F.R.S.

In the same Series, Revised Editions,

1. GREENE'S MANUAL of PROTOZOA, 2s.
2. GREENE'S MANUAL of CŒLENTERATA, 5s.

London : LONGMAN, GREEN, & CO. Paternoster-row.

KELLY'S PRACTICAL BUILDERS' PRICE-BOOK; or, Safe Guide to the Valuation of all kinds of Artificers' Work; with the Modern Practice of Measuring, and an Abstract of the New Building Act; regulating the Construction of Buildings. Revised and Corrected by New Calculations upon the present Value of Materials and Labour. Arranged by an Architect of eminence, assisted by several experienced Measuring Surveyors. Illustrated and exemplified by Steel Engravings and numerous Woodcuts. Royal 8vo price 8s. neatly bound.

London : published by T. KELLY, Paternoster-row; SIMPKIN and MARSHALL; and may be had of all Booksellers.

Of whom may be had, New Editions in Quarto of the following Practical Architectural Works :—

1. PETER NICHOLSON'S PRACTICAL CARPENTRY, JOINERY, and CABINET-MAKING, Revised by TREDGOLD; being a new and complete System of Lines, for the Use of Workmen; founded on Geometrical and Mechanical Principles. Ten parts at 2s. or in boards, 20s.; containing upwards of 130 Steel Plates, and numerous Woodcut Diagrams.

2. PETER NICHOLSON'S PRACTICAL MASONRY, BRICKLAYING, and PLASTERING (revised by TREDGOLD), both plain and ornamental; containing a new and complete System of Lines for Stone Cutting, for the Use of Workmen; the Formation of Mortars, Cements, Concrete, to which is added a variety of Law designs for Mural Tablets, Tombs, Gravestones for Cemeteries, &c. &c.; and a description of the various materials employed. Ten Parts at 2s. or in boards, 20s.; containing upwards of Ninety Steel Plates and Numerous Woodcuts.

3. TREDGOLD and NICHOLSON'S Theoretical and Practical Treatise on the FIVE ORDERS of ARCHITECTURE: containing plain and simple Rules for Drawing and Executing them in the purest style; including an historical Description of Gothic Architecture. Illustrated by upwards of One Hundred Steel Engravings, executed by Artists of first-rate talent, including numerous Diagrams, &c. Twelve parts at 2s.; or in boards, 26s.

4. DESIGNS for COTTAGE and VILLA ARCHITECTURE; containing Plans, Elevations, Sections, Perspective Views, and Details, for the Erection of Cottages and Villas. By S. H. BROOKS, Architect. Beautifully engraved on steel, with Direction for Building, and the estimated Cost of each Edifice. Twelve parts at 2s.; or in boards, 30s.

5. DESIGNS for PUBLIC BUILDINGS, consisting of Plans, Elevations, Sections, Perspective Views and Details of Churches, Chapels, Schools, Almshouses, Gas Works, Markets, and other buildings for public purposes. By S. H. BROOKS, Architect. Beautifully engraved on steel. Ten Parts, at 2s. or 20s. boards.

6. THE HOUSE DECORATOR and PAINTER'S GUIDE: containing a series of Designs for Decorating Apartments with taste, and adapted to the various styles of Architecture. By H. W. and A. ARROWSMITH, House Decorators to her Majesty. Ten Parts, at 2s.; or in boards, 22s.

7. THE HOUSE PAINTER, or DECORATOR'S COMPANION: containing a complete Treatise on the Art of House Painting, Graining, and Marbling; including the Origin of Colour, the Laws of Harmonious Colouring, the Manufacture of Pigments, Oils, Varnishes, &c. By W. M. HIGGINS, Esq. Accompanied by actual Specimens of Hand Brush Graining and Marbling. Ten Parts, at 3s.; or in boards, 35s.

THE ENGINEERS' and MECHANICS' ENCYCLOPÆDIA, a new and enlarged edition, comprehending Practical Illustrations of the Machinery and Processes employed in every description of Manufacture of the British Empire. Illustrated by upwards of 2,000 Wood Engravings. By LUKE HERBERT, Civil Engineer, &c. The rapid progress of Mechanical Science has developed many of the important facts since the first publication, in 1835, of the Encyclopædia. The inventions and discoveries recently made have engaged the sedulous attention of the Editor; for, as the value of each was tested by experiment, a description was accordingly prepared. By the selection of new articles, and care in the revision of old ones, this edition has now become systematically enriched, so that it may be received as fully and faithfully expressing "the existing state of Engineering and Mechanism, adapted to the wants of Practical Men." In two 8vo volumes, cloth lettered, price 30s.

NEW EDITION OF MILES ON THE HORSE'S STABLE.

In Imperial 8vo. with 13 Plates, price 15s. cloth

GENERAL REMARKS on STABLES, and EXAMPLES of STABLE FITTINGS. With Illustrations. By WILLIAM MILES, Esq. Second Edition.

BUNNETT & CO.

PRIZE MEDAL, GREAT EXHIBITION, 1851.

FOR

REVOLVING IRON SHUTTERS.

No. 1.—Patent, Bank Quality, with best Worm and Wheel Gearing, 6s. per foot.

No. 2.—Patent, for Shops and Offices, with best Chain Gearing, 5s. per foot.

No. 3.—Patent, for Private Houses, without Gearing, raised and lowered with Balance Weights, 3s. 6d. per foot.

BUNNETT & CO. invite the attention of Architects and Builders to their recent Improvements in LIGHT REVOLVING IRON SHUTTERS for the WINDOWS of PRIVATE HOUSES, raised and lowered with graduated balance weights, without any paring.

A matured experience, extending over twenty-five years, has convinced the patentees that *no permanent dependence can be placed in any other*

SYSTEM OF

SELF-COILING SHUTTERS.

BUNNETT & CO.'s

Widely-known and well-appreciated

BANK SHUTTER

requires no comment, as it is in use in a large majority of the Banking Establishments, Goldsmiths' Shops, and Public Offices of the United Kingdom and the British Colonies; but the Patentees wish to make it known that they have recently completed extensive Additions to their

WORKS AT DEPTFORD,

and have erected new and most powerful Machinery with the view of meeting the largely-increasing demand for the

REVOLVING IRON SHUTTER,

With all necessary Despatch.

LONDON OFFICE,

GLASGOW OFFICE,
199, BUCHANAN STREET.

THE GREAT FIRE IN THE CITY.—"A closer examination yesterday of the track of the recent fire in Wood-street, shows in a striking manner how much it was confined to a class of buildings the interior arrangements and means of communication of which appear to have been made in defiance of ordinance of the principles which now regulate such matters, under the operation of the Metropolitan Building Act. The warehouses and offices which have perished seem to have been separated from each other by thin lath and plaster partitions for the most part, and only in one instance was there an iron door between one part of the interior of the same building and another, such as is now commonly used and made imperative, indeed, in the construction of warehouses, as an invaluable means of shutting off communication in case of fire. That iron door, too, which remains unburned, would have been completely effectual in arresting the flames in that direction, had they not penetrated by a vulnerable point into the part of the building which it protected

THE USE OF IRON FOR SAFETY AGAINST FIRE was most conclusively proved by a very remarkable circumstance. The large and handsome warehouses of Messrs. J. & R. Morley, situate at the corner of Gresham and Wood Streets, overlooked by a large window on the ground floor at the back the little court in which the fire originated, and to which it was at first confined.

THIS LARGE WINDOW WAS PROTECTED ON THE OUTSIDE BY A REVOLVING IRON SHUTTER, AND THAT MORE AGAINST ROBBERY THAN FIRE.

On this occasion for some time the flames played fiercely, but harmlessly, about the outside of the window so guarded by the iron shutter. Had they once entered Messrs. Morley's premises at that point, the stock stored inside, and estimated at from 250,000 to 300,000*l.*, would inevitably have been destroyed, if, indeed, the devastation would have ended in that one vast pile of buildings. Upon such a slender condition of safety did property almost fabulous in value, and belonging to a single firm, depend in this case."—*Times*, 22nd December, 1863.

THE REVOLVING IRON SHUTTER THAT ARRESTED THIS FIRE WAS MANUFACTURED IN 1849, BY

BUNNETT & CO., Patentees,
London & Glasgow.

STEAM-ENGINE FOR SALE, half-beam, high-pressure, with fly-wheel complete; 10½-inch cylinder, and 39-inch stroke. Cylinder slide and piston, by Easton & Amos, nearly new.—Apply to WM. N. PARSSON, Engineer, No. 194, Southwark Bridge-road.

THORN & CO.
GROSVENOR ROAD, PIMLICO, WOOD PAVING MANUFACTURERS.

GUTTA-PERCHA MILL-BANDS.—The Gutta Percha Company beg to state that the increasing demand for the Gutta-Percha Strapping for Driving bands, Lathestraps, &c. fully justifies the strong recommendations they have everywhere received. Their durability and strength, permanent contractability and uniformity of substance; their non-susceptibility of injury from contact with oils, grease, acids, alkalies, or water; and the facility with which the only joint required can be made in bands of from 200 to 300 feet long, render them superior to leather for almost all working purposes, and decidedly more economical. Every variety of Gutta-Percha Articles, such as Tubing, Soles, Pump-buckets, Fire-buckets, Bosses, Union joints, Flasks, Bottles, Bowls, Toilet-trays, Curtain rings, Galvanic Batteries, Talbotype Trays, &c. &c manufactured by the Gutta Percha Company, and sold by their Wholesale Dealers in town and country.
THE GUTTA-PERCHA COMPANY, PATENTEES,

Care, punctuality, and moderate charges can be relied on.—Letters (town or country), addressed Mr. RICHARDSON, 18, Cannon-street, London, E.C. will receive prompt attention.

QUANTITIES, LAND SURVEYS, LEVELLING, &c. EXECUTED with promptitude and at a reasonable rate, by C. 70, Camberwell New-road, S. and 17, Hill-street, S.W.

TO BE LET, an old-established BUILDERS' BUSINESS, where a profitable trade has been done for many years, with immediate possession.—Apply to T. & T. NASH, Farnham, Surrey.

CHIPPENHAM, WILTS.—To STONE and MARBLE MASONS, CARVERS, SCULPTORS, DEALERS in SLATES, GLAZED TUPS, FIRE BRICKS, CHIMNEY TOPS, &c. In consequence of the recent death of the late Mr Samuel Benjamin King, who for several years has carried on a prosperous trade in the above business, in the thriving town of Chippenham and neighbourhood, his executors are desirous of DISPOSING of the same. The Trade is in full work, and might be extended by an active and competent man of business. The rent of the house and premises is 27l per annum. The stock to be taken at a valuation. A capital of about 400l would be required. The premises are well situated in the Newroad, near the Great Western Railway Station. For further particulars, apply to Mr. JOHN MAYO, one of the Executors; or to Messrs. PINNIGER & AWDRY, Solicitors, Chippenham.

TO PLUMBERS, GLAZIERS, and DECORATORS. For SALE, at a market town in an Eastern County, within two hours of London, an Established and well paying BUSINESS. Open to much increase. Valuation, 200l to 300l.—Apply to O. FARMILOE & SONS, Lead, Glass, Oil, and Colour Merchants 113, St. John-street, West Smithfield, E.C.

TO PAPIER MACHÉ and COMPOSITION MANUFACTURERS.—TO BE SOLD, a BUSINESS in the above trade, at Manchester, which has been carried on by the late Mr George Jackson for 28 years. To either one or two clever young men it would be found to be a desirable opening. 150l will be required to be paid down, and liberal arrangements made for the remainder.—Further particulars on application, either by letter or personally, to Mr JOHN KERR, Accountant, 28, Faulkner street, Manchester.

WATERSIDE PREMISES.—TO BE LET, on lease, a capital WHARF, having a frontage, of 127 feet, to the City Canal Basin. The premises comprise convenient house, dwelling-house (containing four rooms), corn and chaff stores, stabling for 12 horses, with large yard and large yard adjoining, engine-house with chimney shaft, smithy, carpenter's shop, &c. the total superficial area being 10,480 feet. For further particulars apply to Messrs. FULLER & HORSEY, 13, Billiter-street, E.C.

ELIGIBLE FREEHOLD BUILDING LAND, in the CITY of OXFORD.—The Guardians of the Poor of the Oxford Incorporation will offer for SALE, during the course of next Spring, the SITE of the present WORKHOUSE, in the City of Oxford, containing five acres or more.—Further particulars may be obtained of W. JACOB, Clerk to the Guardians.
Oxford, December 10th, 1863.

SYDENHAM HILL.—LAND TO BE LET, for Building, 450 feet frontage, average 200 feet deep. Beautiful site, with extensive prospects, and fronting which road Close to three railway stations, and within ten minutes' walk of the Crystal Palace. May be laid in two, three, or four plots, for detached residences.—For particulars, apply personally to Mr. HENRY DAWSON, Architect, 16, Finsbury-place, South, E.C.

BUILDING GROUND.—CITY of LONDON.—Notice is hereby given, that the City Lands Committee will meet at Guildhall, on WEDNESDAY the 10th FEBRUARY next, at ONE o'clock precisely, to RECEIVE PROPOSALS for a BUILDING LEASE for eighty years, of the site of the premises known as Nos 19, 20, 21, and 22, on the east side of Basinghall-street, in the City of London.—Further particulars may be obtained upon application at the Architect's Office, Guildhall.
FERDINAND BEAND, Comptroller.
Guildhall, January 7th, 1864.

CITY of LONDON.—BUILDING GROUND.—The Court of Assistants of the Worshipful Company of Grocers are prepared to receive TENDERS for taking on a Building Lease, for a term of eighty years, a PLOT of GROUND, containing about 9,000 superficial feet, situate on the east side of the Old Jewry, in the City of London.—A plan of the ground and full particulars may be obtained, upon application to the Clerk or Surveyor, at Grocers' Hall, Poultry, E.C.

A FREEHOLD MANSION TO BE SOLD. The elegant Furniture may be had at a valuation. There are four reception-rooms, two being 30 feet in length; eleven best bedrooms; stabling for eight horses and coach-house; capital servants' offices, extensive ornamental grounds, with green-houses, in a 28 acres grass field; near Sunningdale Station, South-Western Railway, half a mile from Windsor Great Park, and fifty minutes from the Waterloo Station.—Apply to J. MAY, Esq. Solicitor, 67, Russell-square.

THAMES BANK, PIMLICO.—Extensive PREMISES, with the partial use of a private dock entering from the Thames, suitable for a builder's establishment or a factory. TO BE LET on LEASE, for a long term, at a moderate rental.—Apply to Messrs. SCURRY & WRIGHT, Surveyors, 6, Salisbury-street, Strand, W.C.

TO BUILDERS and OTHERS.—HOUSE WANTED to PURCHASE, in the Western Suburbs: Brompton preferred. About ten or twelve rooms. Address, stating lowest terms, to E. J., Rudge's Library, 2, Craven-place, Hyde-park, W.

TO BE LET, by the FISHMONGERS' COMPANY of London, on a BUILDING LEASE for 80 years, valuable BUILDING LAND, NEWINGTON, Surrey, within three minutes' walk of the Elephant and Castle. About three-quarters of an acre of GROUND situate on the east side of the Walworth-road, having a frontage of 106 feet in Crown row, and a frontage of 136 feet to the Walworth-road, and eleven COTTAGES in the rear in Wild Lane-place. The property is well adapted for shops and business purposes requiring space and ready access to the principal thoroughfare of the Metropolis. To be Let by TENDER, in one or more lots, to suit the views of different parties wanting the Ground.—Apply to Mr. W. B. TOWSE, the Company's Clerk, Fishmongers' Hall, London Bridge; or to Mr. RICHARD SUTER, the Company's Surveyor, 23, Fenchurch-street, E.C. where plans and particulars may be seen. The Tenders are to be sent in by MONDAY, the 15th of FEBRUARY next at noon precisely.
Fishmongers' Hall, Jan. 19, 1864.

WESTMINSTER CHAMBERS.—OFFICES and CHAMBERS TO LET.—Apply to Messrs. BANKS & BARRY, 27, Sackville-street; or G. S. SIDNEY, Esq. Secretary to the Mutual Tontine Westminster Chambers) Association, Limited, 39, King-street, Cheapside, E.C.

BRICK-FIELD and BUILDING LAND, about 7 acres (including 3 acres of brick earth), with valuable frontage to the high road, situation very pleasant and healthy, with in one mile of a proposed station on the Tunbridge Railway, now making, and about 11 miles from town, where extensive building is going on, will shortly be commenced.—Apply to Messrs HARDS & VAUGHAN, Auctioneers, Church-street, Greenwich, S.E.

ALUM BAY ESTATE.—FRESHWATER, ISLE OF WIGHT.—BUILDING LAND.—This ESTATE, situate on the western coast of the island, is now TO BE LET for Building Purposes. It possesses the advantages of a dry soil and a lofty position. The air is extremely invigorating, and the scenery varied, comprising as it does the Needles, the Channel, and the English coast, whilst the beach and downs ensure ample amusement to visitors. It is, in fact, a most attractive spot. Several houses are now being erected, and the roads are in course of formation. Term, Ninety-nine Years.—Particulars may be obtained of Mr WILLIAM RAWLINS, Solicitor, Winchester; of Mr. C. P. FISHER, Solicitor, Ventnor and Ryde, Isle of Wight, and of Mr AUGUSTUS FRERE, Architect, 23, Henrietta-street, Covent-garden, London, where plans, showing the disposition of the estate, may be seen.—The journey from London to Lymington and Yarmouth, can be accomplished in about five hours.

TO BE SOLD, a FREEHOLD ESTATE, of 25 acres, near Southgate, with half a mile of frontage, well timbered, admirably adapted to cut up in plots, which are in great demand, for villas of 100l per annum rental. The subsoil is gravel, and the situation high, with magnificent views, and easy of access to the City. Price, 6,500l.—very cheap.—Address, Z, 49a, Lincoln's-inn-fields.

FREEHOLD LAND.—TO BE SOLD, about 42 Acres, with beautiful sites, on rising ground, for one or more villas, 8½ miles S.W. of London and 3 from a station (Farnborough); but there will be one close to the estate. A frontage of 1,000 feet on the turnpike road and a great lodge. Gravel in abundance. Tithe-rent 70s. land-tax redeemed. Price, 1,800l. Three-fourths on mortgage.—To view, apply to Mr NICHOLSON, near the Golden Farmer, Frimley.—Another Plot, of 2½0 Acres, in the rear of this, for 6,000l.

WHARF.—TO BE LET, on LEASE, a WHARF, 200 feet deep, and river front 173 feet 6 inches, with building, coal buildings, gantry frame, &c. of Charlton, near Woolwich Dockyard.—Apply to the WHARFINGER, on the Premises; or Mr. HARVEY, 23, Holywell-street, Westminster.

HARROW.—ROXBOROUGH PARK.—FREEHOLD LAND TO BE LET, on 99 years' leases, for building VILLA RESIDENCES. It is situate near the school, on the slope of the hill, towards the railway, from which it is distant about three-quarters of a mile. The occupant of each house would be entitled to the privileges of the school for his children, and would have a free pass for a day to London for eleven years. Bricks made on the estate.—For particulars, apply to Mr. HESKETH'S Office, No 7, Royal Exchange, E.C.

NOTICE.—The LAND advertised by Mr. T. J. HILL last week, on the South Western Railway, TO BE LET or BUILDING LEASE, is withdrawn, and he has since received another FINE ESTATE of 14 Acres, about three miles from the last, with a river frontage, TO LET in the same way. Plans and particulars will be ready in a few days.—Money Advanced.—Offices, 70, Old-street, E.C.

FOR SALE, or TO BE LET on Building Lease, a DOUBLE PLOT of FREEHOLD LAND, 32 feet frontage, 114 feet deep, situated Gurney road, Leytonstone, Essex, Freehold Price 120l or 7l. per annum on Building Lease.—Apply to W. B. 122 Curtain road, Shoreditch.

CLERKENWELL IMPROVEMENT ACT.—BUILDING LEASES.—The Improvement Committee of the Corporation of London hereby give notice that they will meet at Guildhall on MONDAY, the 29th day of FEBRUARY inst. at ONE o'clock in the afternoon precisely, to receive TENDERS in writing, agreeably to a form to be obtained at the office of the City's Architect, from parties willing to take BUILDING LEASES of certain plots of ground on the east side of Lett-street, on the south side of Ray-street, and the west side of Farringdon-road (formerly called Turnmill-street), in the county of Middlesex, and to Ray-street, and conditions to be agreed upon application at the Architect's Office, Guildhall. WOODTHORPE.
Guildhall, February, 1864.

TO BUILDERS.—TO BE SOLD, the LEASE of EIGHT CARCASES, close to the Norwood Station, each containing Four Rooms each, Offices, with Back Gardens. The work done is in a very superior manner, and they will be immediately when finished at about 200l. each. There being a very great demand for these classes of houses. Part may remain on mortgage. This is an excellent chance for a respectable Builder with a little capital.—Apply personally to Mr. ROBY, 38, Mongrale street.

TO BE LET, in the City of Wells, Somerset, a HOUSE of the FOURTEENTH CENTURY, carefully restored and decorated. It is situated at the north-east corner of the Close, opposite to the Cloister House, and the North Transept of the Cathedral, with which it is connected by a covered passage carried on arches over the road, commonly called "The Chain Bridge." It contains on the ground floor a dining-room 30 feet long by 16 wide and 16 high, richly decorated in the style of the period; a parlour 16 feet square, with a groined stone vault, also richly decorated; a bedroom 16 feet square; and a convenient back kitchen. On the first floor two good bedrooms, one with an oriel window, commanding a fine view of the Cathedral; and on a kitchen of the sixteenth century unaltered. This house is well calculated for an elderly couple of moderate means, wishing to attend the daily services in the Cathedral. Also, a SMALL HOUSE or COTTAGE, in the Vicar's Close (as built by Bishop Ralph in the reign of Edward III., entirely restored, with the decoration carefully restored, and furnished in the style of the period. This cottage is very suitable for a student of the Theological College.—Apply to Mr. HIPPESLEY, House Agent, Wells.

VALUABLE PREMISES.—Large OPEN SPACE, with an area of 1,230 square yards, TO BE LET, immediately, with or with out water communication. There is a frontage of 167 feet to the road, and to obtain the same, one mile to the Tube Bank. The expenses of removal and other incidents, causing such a consequent scarcity of premises, render these extremely valuable.—Apply to R. & W. STURGE, Bridge Wharf, City Road E.C.

BRICKS, PANTILES, AND PAVINGS.

HAMPSTEAD ROAD, CAMDEN TOWN, N.W.
Fire Bricks, Tiles, and Lumps of all sizes, or made to order on short notice.
Crucible and Cement Clay, Wheelers, and for Exportation.
EVERY ARTICLE MANUFACTURED AT THE ABOVE WORKS.
N.B. These goods are supplied to the largest Steel Melting, Armour Plate, and Crucible Works in the World, to which references can be given on application.

TO BRICKMAKERS.—All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr ROBERT WHITE, and which may be seen in operation at the Brick-field of
J. B. WHITE & BROTHERS, Erith, Kent.

The advantages of this plan are two-fold.
1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 35 to about 10 per cent of the total make, which in itself represents a large permanent saving.
2nd The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.
Licenses for use of the Patent granted to Brickmakers, on application to the Patentees, 17, Millbank-street, Westminster.

INTERNATIONAL EXHIBITION, 1862.
CLASS 35, NO. 6849.
The only Medal "for Stone Ware" has been awarded to
DOULTON & WATTS, LAMBETH POTTERY,
LONDON.

In expectation of a greatly increased sale, D. & W. have determined to introduce the annexed pattern of their ENAMELLED STONEWARE CLOSET-PANS, at the price of the commonest description of earthenware.
Experience has shown that this shape is the most simple and efficient, and that in strength, durability, and cleanliness it cannot be surpassed by the most expensive closets.
FIGURE D STONEWARE CLOSET PAN AND TRAP, 3s. 9d. COMPLETE.

DOULTON'S PATENT OPERCULAR PIPES.

By the introduction of one of these Pipes, at intervals, with ordinary Socket Pipes, Drains can be examined and cleansed. The Cover, being fired in one piece with the Pipe, fits perfectly. There are no imperfect joints, or complication of parts.
Manufactured by HENRY DOULTON & CO. LAMBETH.

KEYNSHAM BLUE LIAS LIME AND CEMENT WORKS, SOMERSET.

MESSRS. FULLER & HORSEY are instructed by the Official Liquidator to SELL by AUCTION, on WEDNESDAY, MARCH 16th, at TWELVE o'clock at the AUCTION MART, London, in One Lot, unless an acceptable offer be previously made by private contract, the newly-formed FREE-HOLD WORKS and ESTATE of the Keynsham Blue Lias Lime and Cement Company (Limited), together with the modern PLANT and MACHINERY. The property is freehold, and comprises a site of 7a. 2r. 36p. or thereabouts. The works were established for manufacturing blue lias lime from stone quarried on the estate, and for making cement. The existing kilns and levers are capable of producing 70 tons of lime of lime and 120 tons of cement weekly, both products are well approved by large contractors and eminent architects, the cement being used in many of the Government fortifications now in progress. Coals are supplied to the works at a very low price, and the Great Western Railway Station is within a short distance. The building is of a substantial and the machinery of the best description; the motive power is given by two iron water-wheels, driven by the river Chew, a regular stream of water, of great power; and there is a steam engine, with boilers, if required. Additional supply of lias stone to be raised from adjoining quarries on favorable terms. May be viewed till the Sale, and particulars had of Messrs. LINDO & SONS, Solicitors, 4a, Moorgate-street; of F. MAYNARD, Esq. Liquidator, 19, Bread-street, Cheapside; at the Mart; and of Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.

Canon's Marsh, Bristol, February 3rd, 1864

SALE of the AUCTION MART, LONDON.

The Directors of the Company of Proprietors of the Auction Mart will be prepared, at ONE o'clock p.m. on MONDAY, the 29th day of FEBRUARY next, at the Board-room of the said Company, in the Mart, to open sealed TENDERS from persons desirous of PURCHASING the premises generally known as the AUCTION MART, opposite to the Bank of England, London. Each Tender must be accompanied with a receipt annexed to it, signed by the proper officer of the Union Bank of London, acknowledging that the sum of £ has been paid into the Bank by the person making such Tender to an account there of "The Trustees of the Auction Mart," and no cognizance shall be taken of any Tender not so signed. And no Tender delivered his Tender with such receipt annexed thereto into the hands of the Secretary of the said Company, either on SATURDAY, the 27th of FEBRUARY next, between the hours of TEN a.m. and FOUR p.m. or upon the morning of MONDAY, the 29th day of FEBRUARY, between the hours of TEN a.m. and ONE p.m. after which time no Tender for or for any such Tender will be received. The highest Tender will be accepted, provided the sum tendered shall be equal in amount to, or exceed, a reserved price determined upon by the Directors of the said Company and unknown prior to the time of opening of any of the Tenders. If upon opening the Tenders it shall be found that two or more Tenders are of the same amount, with such amount the highest tendered, the Directors of the said Company reserve the power of reading which one of such two or more Tenders shall be accepted, and of rejecting the one or more not so accepted. A form of agreement to be entered into will be ready to be executed by the person whose Tender shall be declared accepted, immediately upon any such declaration being made by the Directors of the said Company, and the deposit money of such person shall absolutely forfeit to the Company the sum he shall have previously deposited in the said Bank. Copies of the said agreement, together with copies of the Conditions of Sale and Terms of Tender, and Forms of Tender, have been printed, and may be had gratis on application at the Auction Mart, or at the Offices of the Solicitors to the said Company, Messrs. UPTON, JOHNSON, & UPTON, 20, Austinfriars, E.C. The moneys deposited by all parties whose Tenders may not be accepted will be returned to them on application at the Union Bank of London, on the 29th of February, between the hours at which a final declaration may be made with respect to the Tenders received and Four p.m. or on the ensuing day between the hours of Ten a.m. and Four p.m. The premises may be viewed by all persons provided with tickets, to be obtained as above.—By order of the Board of Directors,

Auction Mart, January, 1864 G. H. JAQUES, Secretary.

TO ARCHITECTS, BUILDERS, DECORATORS, AND OTHERS.

MR. EDWIN WHITE will SELL by AUCTION, at TWELVE, Holborn-bars, and 1, Castle-street, Holborn-hill, on TUESDAY next (FEBRUARY 9), at ONE, a large and important STOCK of FRENCH and ENGLISH PAPERHANGINGS, in extraordinary variety, nearly 200 white and coloured marble chimney-pieces, comprising almost every style in use, and including some of great beauty, 10 feet of white tiled, a few water-closets, and other effects.—May be viewed and catalogues had on MONDAY and morning of sale

WESTMINSTER.—Valuable and extensive Plot of Freehold Building Land, in Victoria-street, for immediate Sale.

MESSRS. DANIEL SMITH, SON, & OAKLEY have received instructions to SELL by AUCTION at the MART, near the Bank of England, on WEDNESDAY, the 24th of FEBRUARY, at TWELVE o'clock, in one lot, a very valuable FREEHOLD ESTATE, consisting of a large PLOT of first-class BUILDING LAND, in a desirable position, in Victoria-road, Westminster, close to the Abbey and the Houses of Parliament. It has a frontage of about 660 feet to Victoria-street, and of about 150 feet to Bessborough-street, with a considerable depth, and has an area of about two acres. The situation renders this land well adapted for the site of any public building or institution, or for the erection of professional chambers, or mansions in the best neighbourhood; and a block of this size, in the heart of London, is becoming daily more difficult and costly to obtain. The land (except as to a very small portion), will be free from the ordinary burdens, and will not be affected by the liabilities of the Westminster Improvement Commissioners.—Particulars, with plans, may be had of Messrs. W. and W. A. WALLER, 27, King-street, Cheapside, E.C.; at the Mart; and of Messrs. DANIEL SMITH, SON, & OAKLEY, Land Agents and Surveyors, No. 10, Waterloo-place, Pall-mall, S.W.

TO TIMBER MERCHANTS, SHIPBUILDERS, WHEELWRIGHTS, BUILDERS, and OTHERS.

MESSRS. ROBERTS & CO. will SELL by AUCTION on WEDNESDAY next, FEBRUARY 10th, at TWELVE o'clock precisely, in the SECOND PORTION of the WELL-SEASONED STOCK of Messrs. R. WARD & SON, on the PREMISES, 101, Bermondsey New-road, Southwark, S.E.; comprising 10m. ft. run mahogany in logs, planks, and boards, oak and teak timber, mill plank, beech plank, birch, dry Honduras and walnut panel board, spokes, felloes, stocks, and every description of wheel and shipwrights' timber, dry yellow and white deals, planks, and battens, dry white and yellow prepared flooring, matched boards, &c. On view day prior, and morning of sale. Catalogues had on the premises, and of the Auctioneers, 9, Billiter-street, E.C.

BUILDING MATERIALS.—To Carpenters, Builders, and Others.

MESSRS. F. HALL & SON will SELL by AUCTION, on THURSDAY, FEBRUARY 11th, 1864, at TWELVE o'clock, on the PREMISES, Cheshire street, Shoreditch-gardens, Kensington, the excellent MATERIALS of some MODERN HOUSES, & taken down for the London, Chatham, and Dover Railway: comprising sound timber in long joists, rafters, plate, and quartering, long fresh cut scantling, fir girders, and prestanuons, oak ground posts, excellent long flooring and warehouse boards, 2 by 4 and 3 inch floors and other deals, 11 pairs modern sashes and frames, French casements, partitions, doors, &c. coachhouse gates, plain tiles, York paving, stone slabs, ornamental ironpipes, hearths, &c. stoves and ranges, force pump, water-butts, a few lots of dry yellow deals and planks, and other useful materials and effects.—May be viewed, and catalogues had, of the Auctioneers, Chester street, Kensington, S

LUTON, BEDS. To ENGINEERS, MACHINISTS, SEWING-MACHINE MAKERS, and OTHERS.

MR. GEORGE HALTON will SELL by AUCTION, on WEDNESDAY, FEBRUARY 17th, 1864, at TWELVE o'clock, on the PREMISES, Foundry Lane, Luton, Beds, by order of the Trustees of the Estate of Mr. BLAND, the VALUABLE MACHINERY, in excellent condition, in its SIX HORSE POWER CYLINDRICAL EGG-END STEAM BOILER, 6-in horse power table engine, with piping, &c. complete; a 50 feet screwing lathe, 12-inch centres, vertical drill head combined, driving chuck, and face-plate complete; a very powerful fly press; 8-inch centre back-geared lathe, 8-feet bed, with hand and slide rests, drilling jack and plate, vertical drill, with moving table complete, fitted for power; camb cutting machine, with over-head motion; set of four gearing drivers, four pulley couples; shafting, riggers of various width, banding, forge, bellows and frame, a sewing machine, various tools, and other effects.—May be viewed two days prior and morning of sale, and Catalogues had at the Auctioneer's Offices, Luton and Woburn, Beds, or by post on application.

HELD AT A PEPPERCORN RENT.—A commanding Corner Upholsters Shop and Premises, with handsome double plate-glass Front, Stalling, &c occupying an excellent Business Position, fronting the Cattle Market, No. 13, Eden-place, near Commercial road, Old Kent-road; let at the low net Rent of 64l; Term, 60 Years; free of Ground-rent. Also that valuable Engineer's Factory, the "East London Iron Works," Stepney-causeway, Old Kent-road, comprising Three Floors, Clerk's Office and private Room, Counting-house, three-stall Stable, Cart Shed, and separate Cart Entrance, and Manager's Residence; the whole let to a yearly Tenant at the inadequate Rent of 70l. per Annum: worth 84l.; Term, 60 Years; at the usual Ground-rent of 6l

MESSRS. TEBB, BROTHERS, will SELL by AUCTION at the AUCTION MART on WEDNESDAY, FEBRUARY 17th, at ONE o'clock. Particulars at the Auction Mart and Auctioneers', 11, Kingsland-road, and 3, Adelaide-place, London-bridge, E.C.

In Chancery: "Vokins v. Gray."—Freehold Building Land, Spitalfields.

W. HEPWORTH DIXON, } Hon. Secs.
J. O. HALLIWELL, }

NATIONAL SHAKESPEARIAN TERCENTENARY FESTIVAL, STRATFORD-UPON-AVON.

—TO CHAIRMAKERS and OTHERS.—Persons desirous of TENDERING for the SUPPLY or HIRE of 2,000 CHAIRS, to be used during the Tercentenary Celebration in the Pavilion now being erected by the Stratford-upon-Avon Shakespeare Tercentenary Celebration Committee, can obtain form of Tender and full particulars, on application to Messrs. THOMPSON & COLBOURNE, Architects, Stratford-upon-Avon. Tenders to be sent in on or before TWELVE o'clock noon, on SATURDAY, the 20th day of FEBRUARY, 1864, addressed to the Chairman of the Tercentenary Festival Building Committee, Town-hall, Stratford-upon-Avon. The lowest or any Tender will not necessarily be accepted.—By order,

ROBERT E. HUNTER, Secretary.

ART-UNION of LONDON.—Subscription

One Guinea.—Prizeholders select from the public exhibitions. Every Subscriber has a chance of a valuable Prize, and, in addition, receives a handsomely-bound folio copy of Coleridge's poem of "THE ANCIENT MARINER," illustrated by twenty Plates, designed expressly for this Society, by J. Noel Paton, R.S.A. The Work is now ready for delivery.

444, West Strand, February, 1864. GEORGE GODWIN, } Hon. Secs. LEWIS POCOCK, }

ROYAL SCHOOL of MINES, JERMYN STREET.

—Professor WILLIS, F.R.S. will commence a COURSE of THIRTY-SIX LECTURES, "On Applied Mechanics," on MONDAY, the 15th FEBRUARY, at TWELVE o'clock, to be continued on every Week-day but Saturday. Fee for the Course, 3l.

Professor RAMSAY, F.R.S. will commence a COURSE of THIRTY LECTURES, "On Geology," on MONDAY, the 15th instant, at TWO o'clock, to be continued on each succeeding TUESDAY, WEDNESDAY, THURSDAY, and MONDAY, at the same hour. Fee for the Course, 3l. TRENHAM REEKS, Registrar.

BILLING'S PATENTS.—CHIMNEY TERMINALS.—THROAT VALVES.—NOTICE to ARCHITECTS.

The Proprietors of these PATENTS have given the Widow an Interest in the same, and have considerably reduced the prices of the Articles, trusting that by so doing these useful Inventions may be introduced more generally in all new buildings.—For prices, apply to the Manager, Mr. TYLER, 12, Abingdon-street, Westminster, who will also afford any information, he having been for many years engaged with the late Mr. BILLING, in the practical curing of Smoky Chimneys.

NOTICE.

BROWN & GREEN'S KITCHEN RANGE

WAREHOUSE is now REMOVED to the NEW PREMISES, 72—74, Bishopsgate-street Within, a few doors from the late Address, at No. 81. These afford accommodation for a still larger stock of their Patent Prize Medal Ranges and Stoves, Register Grates, and Cooking Utensils, to meet the great public demand; and also for the consequent more extensive execution, by the manufacturers themselves, of all descriptions of hot water, bath, laundry, and steam work

72 74, Bishopsgate street Within, November, 1863.

COMPETITIONS.

ASHFORD, KENT.—PROPOSED NEW CHURCH

near the RAILWAY WORKS.—The Committee are desirous of receiving DESIGNS for a NEW CHURCH, capable of holding not less than 600 persons. The outside walls to be of Kentish rag, tiled roof, open sittings of stained deal. The Architect is to state the sum for which the work may be completed; and must be prepared, if required, to find a builder willing to undertake it for such sum. 20l. will be paid for the selected design. Plans and specifications to be sent, under cover, to the Committee, at the College, Ashford, on or before the 1st of MARCH next.

JOHN PRICE ALCOCK, Chairman.

Ashford, January 28th, 1864.

TO ARCHITECTS.—VILLA and COTTAGE RESIDENCES.

—The Directors of the Manchester Villa and Cottage Association, Limited, offer 50l. PREMIUM for the BEST DESIGN, and 25l. for the Second best Design, for FOUR COTTAGES and SIX DWELLING HOUSES.

First a Row of Four Cottages, not to exceed 100l. each in cost.

Secondly, a Group of Two Houses, not to exceed 200l. each in cost.

Thirdly, a Group of Two Houses, not to exceed 300l. each in cost.

Fourthly, a Group of Two Houses, not to exceed 500l. each in cost.

The plans and drawings, at a scale of 1in. to 1ft. with figured dimensions, to be sufficient to show the respective designs, and to be accompanied with a general description of the materials and finish. Plans of proposed sites for the groups may be had from the Secretary. Buildings undertaken by the Association may be built under the superintendence of any architect nominated by the person or persons who covenant to purchase them when built. Messrs CORBETT & RABY, the Architects and Surveyors to the Association, will not compete for the above, but will assist the Directors in adjudicating the premiums. The designs to be sent in to the Secretary, sealed and endorsed "Designs for Villa and Cottage Residences," on or before the 30th of APRIL next, marked with a motto, and with sealed envelope containing Architect's address, or signed with name instead of motto, if preferred. Designs not adjudged to receive the premium to be returned.

JOHN WORTHY WILLIAMS, Secretary.

Offices, 26, Market-street, Manchester, January 15, 1864.

PENARTH HARBOUR, DOCK, and RAILWAY COMPANY.

—NOTICE to ARCHITECTS, BUILDERS, and OTHERS. The Penarth Harbour, Dock, and Railway Company, are prepared to receive PLANS, DESIGNS, ESTIMATES, and SPECIFICATIONS for an HOTEL, a DOCK-MASTER'S HOUSE, a DOCK-OFFICE, a CUSTOM-HOUSE, and TEN MERCHANT'S OFFICES, to be erected at Penarth. The Company will pay a premium of 50l. for those Plans and Designs which shall be considered by the Company the best. A ground plan may be seen and further particulars obtained on application to the Company's Secretary, at the Penarth Harbour Office. Plans and Designs to be sent in, addressed to the Directors, on or before the 19th MARCH, 1864.—By order of the Board,

BOOTH BACON, Secretary.

Company's Office, near Cardiff, Feb. 10th, 1864

CONTRACTS.

ARMY CONTRACTS.—TENDERS will

be received at this Office until TWELVE o'clock, Noon, on TUESDAY, the 23rd FEBRUARY, from parties who may be willing to enter into CONTRACTS for the SUPPLY of FUEL and LIGHT, in such quantities as may be required, for the use of Her Majesty's Forces and Military Departments at the following places, from 1st APRIL, 1864, to 31st MARCH, 1865:—

Aldershott Camp.—WALLSEND COALS, COKE, KINDLING WOOD, CORFSTITE and DIP CANDLES.

Royal Military College, Sandhurst.—WALLSEND COALS.

Waterworks, Bourley—SMALL COAL (such as that known as "Newport Smalls").

Separate Tenders are required for each of the above-named places, and for Fuel and for Light.

Forms of Tender and Conditions of Contract may be obtained on application at this Office, by letter or in person, between the hours of TEN and FOUR o'clock, where every information on the subject will be furnished.

The Tenders must be made on the printed forms, properly filled up, signed, and delivered at this Office (under closed envelope, marked on the outside "Tender for Army supplies"), by the hour appointed, and no Tender will be noticed that is not in compliance with these conditions.

Commissariat Office, Aldershott, 5th February, 1864.

NOTICE to BUILDERS.—The Commanding Royal Engineer at Sheerness hereby gives notice, that

sealed TENDERS will be received at the Office of the Director of Contracts, War-Office, Pall-mall, on or before TUESDAY, the 1st day of MARCH, 1864, from such persons as may be desirous of CONTRACTING with the Secretary of State for War, for the term of three years, commencing on the 1st day of APRIL, 1864, for the SUPPLY of MATERIALS, and for the performance of such Bricklayers', Masons', Carpenters', Slaters', Plasterers', Plumbers', Smiths', Paviors', Painters', Glaziers', Paperhangers', and Gasfitters' Work, as may be required by the Royal Engineer Department at the Stores, including Cheyney Rock and Queenborough, the Isle of Grain, with the Tower, and Slough Fort.

Only one contractor will be accepted for the whole of the trades; and the parties tendering must state on each schedule, according to the printed directions thereon, the rate at which they are willing to perform the work, which rates of per-centage may be different for each trade, should it be deemed expedient.

Printed schedules and every particular relating thereto may be obtained at this Office, between the hours of TEN and FOUR, till the 27th FEBRUARY, instant, after which date none will be issued.

Tenders for the above works to be addressed to the "Director of Contracts, War-office, Pall-mall, London, S.W.," and endorsed "Tender for Builders' Work, Sheerness, &c." in the left hand corner of the envelope.

No Tender will be attended to which is not filled up strictly in conformity to the instructions, as stated in the printed schedules nor will any offer be accepted but from such person or persons as may be considered competent to perform the work for which they may tender.

N.B.—The Secretary of State for War reserves to himself the right of rejecting the whole or any of the Tenders

Royal Engineer Office, Sheerness, Feb. 4, 1864

POULTON, BARE, and TORRISHOLME

LOCAL BOARD of HEALTH.—MORECAMBE WATER SUPPLY.—To IRONFOUNDERS and THERS. The Local Board of Health for the district of Poulton, Bare, and Torrisholme, in the County of Lancaster, do hereby give notice, that they are prepared to receive TENDERS from all parties willing to SUPPLY CAST IRON PIPES and other CASTINGS required for the Proposed WATER-SUPPLY of Morecambe, within the said district.—Drawings may be seen, and copies of the specification, with duplicate forms of Tender, bills of quantities, and schedules for prices, may be obtained (on payment of one pound) on application at the Office of C. T. CLARK, Esq. Solicitor, Lancaster (Chairman of the Local Board); or at the Office of JOHN LAWSON, Civil Engineer, 34, Parliament-street, Westminster. Sealed Tenders, endorsed "Tender for Cast iron Pipes," must be forwarded to the Chairman of the Local Board, on or before MONDAY, the 29th day of FEBRUARY, 1864. The Local Board do not bind themselves to accept the lowest or any Tender.

C. T. CLARK, Chairman of the Local Board.

Morecambe, 12th January, 1864.

METROPOLITAN IMPROVEMENTS.—

SOUTHWARK STREET.—The Metropolitan Board of Works hereby give notice, that they will meet at their Office, Spring-gardens, Charing-cross, on WEDNESDAY, the 2nd MARCH, now next, at TWELVE o'clock at Noon precisely, and will be prepared to open TENDERS by parties who may be willing to take on BUILDING LEASES all for any of certain PLOTS of GROUND, situate on the north and south sides of Southwark street from High-street, Borough, to Blackfriars-road. Particulars, conditions, and form of Tender, and every information may be obtained in the Superintending Architect's Office, at the Office of the Board, on and after the 1st of FEBRUARY next, between the hours of NINE a.m. and FOUR p.m. The Tenders must be on the printed form supplied at the Office of the Board, and be delivered under sealed covers, endorsed "Tender for Ground in Southwark street," and addressed to the Clerk of the Board, at the Office of the Metropolitan Board of Works, Spring-gardens, S.W. before TWELVE o'clock at noon, on the said 2nd MARCH next, and no Tender will be received after that hour. The Board do not bind themselves to accept the highest or any Tender.

JOHN POLLARD, Clerk of the Board.

Spring gardens, Charing-cross, 9th January, 1864.

[For remainder of Contracts see next Page.

CONTRACTS.

TO BUILDERS.—LEEDS MECHANICS' INSTITUTION and SCHOOLS of SCIENCE and ART.—CONTRACTS are required for the ERECTION and COMPLETION of the proposed NEW BUILDING for the above Institution. The plans, specifications, and terms of conditions may be seen at the Office of Mr. CUTHBERT BRODRICK, C.E., Park-place, Leeds, on and after MONDAY, the 15th of FEBRUARY. Tenders are to be delivered to the Honorary Secretaries, the Lads Mechanics' Institution, South Parade, not later than MONDAY, the 7th of MARCH. The lowest Tender will not necessarily be accepted.—By order,

H. WARDMAN, } Hon. Secs.
W. J. NEILD, }

February 9, 1864.

CROYDON LOCAL BOARD of HEALTH.—WELL SINKING and BORING.—The Board are desirous of CONTRACTING for SINKING and BORING a Well, 4 feet 6 inches in diameter, through the Lambeth Hill Rock, and 3 feet 6 inches in diameter through the Chalk, in the Yard of the Workhouse, Croydon, and for supplying and fixing a Pump and Iron Pipes complete. Plans and Specifications may be seen at the Office of the Board, and Tenders, endorsed "Tender for Well," are to be delivered at my Office, before FOUR p.m. on the 22nd day of February inst. The Local Board do not hold themselves bound to accept the lowest Tender.

BALDWIN LATHAM, Engineer and Surveyor.

Engineer's Office, Town Hall, Croydon, Feb. 11th, 1864.

TO BUILDERS, CARPENTERS, and OTHERS.—NOTICE.—The Nevill Memorial Committee are prepared to receive TENDERS for the ERECTION of a BUILDING adjoining the Athenæum, Llanelly, consisting of a Museum, Class-rooms, Reading-room, Dwelling-house, and Stabling. Plans prepared by James Wilcox, F.R.A.B.E. (Bath), which may be seen at the Town Hall, Llanelly.—Sealed Tenders, addressed to "The Honorary Secretaries of the Nevill Memorial," at the Hon. Bankers, may be sent in on or before the 1st day of MARCH, 1864. The Committee do not pledge themselves to accept the lowest or any Tender.

FRED. L. BROWN,
RICHD. T. HOWELL, } Hon. Secs.
E. B. JONES,

Llanelly, 5th February, 1864.

TO CONTRACTORS.—DRAINAGE.—The Halstead Local Board of Health are prepared to receive TENDERS for CONSTRUCTING and LAYING the MAIN DRAINAGE for the Town of Halstead. The drawings and specifications may be seen, and forms of Tender may be obtained, at the Office of Mr. E. MONSON, Surveyor to the Local Board, at Halstead; and sealed Tenders must be sent to me on or before SATURDAY, the 27th of FEBRUARY inst. The Board do not bind themselves to accept the lowest or any Tender.—By order of the Board,

G. P. ARDEN, Clerk to the Board.

Halstead, February 12, 1864.

BOROUGH of PORTSMOUTH.—LANDPORT and SOUTHSEA TRAMWAY. To CONTRACTORS.—The Directors of the Landport and Southsea Tramway Company are desirous of TENDERING for the CONSTRUCTION of the above TRAMWAY from the Railway Terminus at Landport to the Southsea Pier, including the ADDITIONS to and at the PIER. The specifications and drawings will be found in the Offices of the Engineer, Mr. HOOD, 6, Little George-street, Westminster, on and after MONDAY, the 15th instant; and Tenders upon the prescribed forms can be had and delivered to the undersigned at the Knight's Arms, Southsea, before NOON on FRIDAY, the 26th instant. The Directors will not be bound to accept the lowest or any Tender, unless they think fit to do so.

HENRY HOLLINGSWORTH, Secretary.

King's Rooms, Southsea, 10th February, 1864.

CONTRACT for IRON ROOF and BUILDINGS.—PATENT FILE COMPANY, LIMITED. Plans and Specifications may be had on application for TWO CONTRACTS, viz.:—

For Iron Roof, about 35,000 Square Yards, and Builder's Iron Work.

For the Buildings to be erected in Birmingham.

Persons desirous of Tendering for the above, or either of them, are requested to communicate by Letter, addressed to me, not later than TUESDAY, the 16th instant, addressed to the Manager Mr RICHARD ALLINSON, 23, Waterloo-street, Birmingham.

February 9, 1864. HENRY ROWEL, Secretary.

PARISH of SAINT MARY ABBOTTS, KENSINGTON, in the COUNTY of MIDDLESEX.—WATERING of STREETS.—The Works, Buildings, and Sanitary Committee of the Vestry of the Parish aforesaid, will receive TENDERS at their Office, High-street, Kensington, on FRIDAY, the 19th day of FEBRUARY instant, at TWELVE o'clock in the forenoon, for the WATERING of the STREETS of the said Parish, HORSE-DRAWN and MEN, for WATERING certain STREETS in the said Parish, for Eight consecutive Months, commencing on the 1st day of MARCH next. The Vestry have ordered the Parish to be bounded, and to be divided into District.—South District, the parties Tender to be at liberty to Tender for the District, or any part or parts thereof. Printed Forms and schedule of streets can be obtained on application at the Vestry Hall, where the Tenders, sealed, and endorsed "Tender for Street Watering" are to be delivered, before the hour named for the delivery of the same. The Committee will be prepared to enter into a written contract, and to require two good and sufficient sureties in a bond of £200. The contractor to pay the expenses of contract and bond.—By order,

REUBEN GREEN, Clerk of the Vestry.

Vestry Hall, Kensington, February 8, 1864.

LONDON, CHATHAM, and DOVER RAILWAY.—To TIMBER MERCHANTS and OTHERS.—The Directors of the London, Chatham, and Dover Railway Company are prepared to receive TENDERS, on or before the 22nd instant, for the SUPPLY of 6000 BEECH SLEEPERS, 2000 SAWN HARD WOOD SLEEPERS, 10 inches by 5 inches, delivered free, on their Wharf at Faversham. The specification and form of Tender may be had, on application at the Office of Mr. WILLIAM MILLS, the Company's Engineer, at Victoria Station, S.W. The Directors do not hold themselves to accept the lowest or any Tender.—By order,

E. W. JOHNSON, Secretary.

Office, Victoria Station, 9th February, 1864.

TO BRICKLAYERS, &c.—The Vestry of the Parish of Rotherithe will meet on TUESDAY, the 1st day of MARCH next, at HALF-PAST SIX o'clock in the evening precisely, at the BOARD-ROOM at the Workhouse, Deptford Lower-road, to open and consider TENDERS from such persons as may be desirous of CONTRACTING for the execution of such DRAINS as the Vestry may direct to be performed in the Parish of Rotherithe. Printed forms of Tenders and particulars of the work to be done, may be obtained at the Clerk's Offices, 61, Paradise-street, Rotherithe; or of Mr. GEORGE LEGG, the surveyor, 61, Kirby-street, Hatton-garden, London. Tenders, accompanied with the names of two responsible persons, to be bondsmen for the contractor, and addressed to the CLERK of the VESTRY, must be sent in on or before TWELVE o'clock on TUESDAY, the twenty-first day of MARCH, after which time no Tender will be received. The Vestry requires the parties tendering, or some persons on their behalf, to be in attendance at HALF-PAST SIX o'clock on the day appointed for opening Tenders. The Vestry will not accept the lowest or any Tender, unless signed by—By order,

HAWKS & STOKES, Clerks.

February 12th, 1864.

THE LEAMINGTON PRIZE KITCHENER.

Those Ranges are strongly recommended for Economy, Cleanliness, and a Cure for Smoky Chimneys.

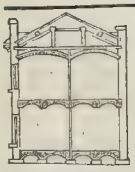
The Top forms an entire and efficient Hot Plate, and having an Open Fire, removes all the objections of a Close Fire-range.

A large STOCK of SELF-ACTING and other RANGES, REGISTER STOVES, and every description of BUILDERS' IRONMONGERY, at Wholesale Prices.

All Goods delivered free within Five Miles.

BURT & POTTS,
WHOLESALE AND MANUFACTURING IRONMONGERS
38 and 65, York-street, Westminster.

BROWN & GREEN'S
PATENT KITCHEN RANGES.
PRIZE MEDAL, 1862.



These Ranges combine the latest improvements with great simplicity and durability. They afford facility for roasting meat in front of the fire without interruption to the action of the oven, hot plate, boiler, &c. The Ovens are well ventilated, and perfect either as roasters, or for baking bread or pastry. For Efficiency, Economy, and Ventilation, and

CURE OF SMOKY CHIMNEYS,

these Ranges are unequalled. They are of all sizes and prices; and when fitted with Bath and Steam Apparatus, &c. they form the most complete appointment for good establishments. Designs, &c. may be had on application at THE LONDON WAREHOUSE,

72 -74, BISHOPSGATE STREET WITHIN.

"One of the best arrangements of the 'Kitchener.'"—See *Builder*, Sept. 6, 1862.

THE DENNETT ARCH.

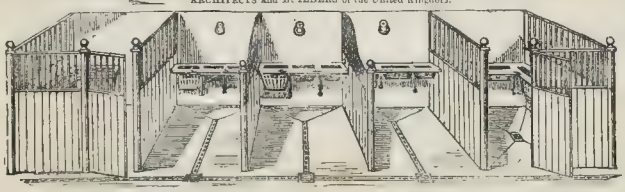
Allowed to be the cheapest fireproof construction known, and used with the greatest success for the last ten years in the Midland Counties, and has been adopted by G. G. Scott, esq. for the New Foreign Offices, used in any form of arch, groin or dome; turned to any length, width, or height, forming a perfect floor and ceiling in one mass, from 2½ inches in the crown to any required thickness.

Address to the Patentees,—A. & R. DENNETT & CO. NOTTINGHAM.

TESTIMONIAL.—"I have made use of Messrs. Dennett & Co.'s material for Fireproof Arching, and though I have, happily, had no practical experience of its efficiency as against fire, I can bear witness to its strength, and its extreme convenience of application. I have made use of it in positions in which I should have found it difficult to introduce any other fireproof material, and it has this advantage, that the arches constructed of it are so entirely in one mass that they cover the space like a compact shell or inverted basin, and are, consequently, almost wholly free from lateral pressure.
"GEO. GILBERT SCOTT, 20, Spring Gardens, London."

EXHIBITION PRIZE MEDAL, 1862, AND MEDAL OF ROYAL AGRICULTURAL SOCIETIES OF ENGLAND AND IRELAND.

MUSGRAVE'S PATENT STABLE AND HARNESS FITTINGS.



MUSGRAVE'S PATENT HARMLESS LOOSE BOXES. MUSGRAVE'S PATENT IRON COW STALLS AND PIGGERIES.

Architects who have not seen these Fittings are requested to write for Engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition. They can be seen in first-class stables in almost every county in England and MUSGRAVE, BROTHERS, are now fitting several very large establishments under directions of London Architects, noted for adoption; only what is the best of its kind. Particulars of these, as well as of MUSGRAVE'S PATENT SLOW-COMBUSTION STOVE, will be forwarded on application to

MUSGRAVE, BROTHERS, ANN STREET IRON WORKS, BELFAST.

SHEFFIELD.

WROUGHT IRON WINE BINS.

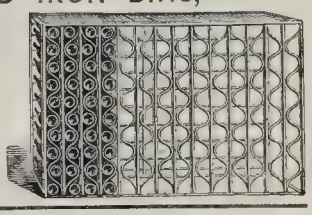
FARROW & JACKSON

Beg to call the attention of Architects and Builders to their Wrought Iron Wine Bins, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workman. They combine great strength with lightness and economy of space, and their DURABILITY has been satisfactorily PROVED DURING nearly FORTY YEARS.

The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.

Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom.

*** As these Bins were the invention of the late Mr. FARROW, and great attention has been given to them by the present Firm, long practical experience enables FARROW & JACKSON to offer the best advice as to arrangement.



ALSO THEIR

NEW REGISTERED IRON BINS,

Made any size or shape, to fit any spare corner, with SEPARATE REST FOR EACH BOTTLE,

Peculiarly adapted for Private Cellars.

No laths are required, and all trouble of Binning is avoided. The Cellular Bins may also be had fitted with light lattice doors, affording perfect security to the contents of the Bin.

SMOKY CHIMNEYS.
S. DEACON
Respectfully invites the attention of Architects, Builders, &c. to his
PATENT LOUVRE CHIMNEY CAP,
which has been in use some time with perfect success, many smoring chimneys where other caps have been of no avail.
The advantages attending this Cap are—it can be thoroughly cleaned by the machine when the chimney is swept, the brush being able to pass through the Cap without the liability of its displacing it, an increased up current, and the impossibility of a down one.
Prospectus, with testimonials, forwarded on receipt of Postage Stamp, by
S. DEACON,
59, ALMA STREET, HOXTON, N.
MANUFACTORY:
HEMSWORTH STREET, SAINT JOHN'S ROAD, HOXTON, LONDON, N.

SMOKY CHIMNEYS.

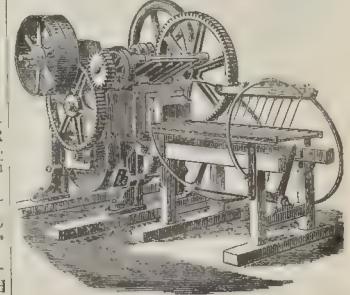
AND BUILDING GOODS GENERALLY.



A good Stock on the Wharf. Bricks, Sand, Ballast, &c. by barge alongside, where required

JOHN DOWNEY, Victoria Wharf, Nine Elms, S.

Also Licensed Lighterman, of 11, Millbank row, S.W.; and Licensed Lighterman and Wharfinger, of Hermitage Steam Wharf, Wapping, E.

BRICKMAKING,

BY STEAM OR HORSE POWER,

BUNNETT'S PATENT

CONTINUOUS FEED MACHINES

Are the cheapest and most efficient, and will make from 5,000 to 50,000 bricks per day, according to the power applied and the requirements of the proprietor, at one-third less working expenses than any others.

Price 75*l.* including royalty, and a gun-metal die for Solid, and Perforated or Hollow Bricks.

They also make all kinds of Sanitary Pipes, Tiles, or Moulded Bricks, of a superior quality.

LICENCES GRANTED TO MANUFACTURERS.

For particulars apply to BUNNETT & CO. Engineers, Deptford, Kent, where the Machines may be seen at work.

FIRE BRICK and CEMENT WORKS

WOODEN BOX, near BURTON-ON-TRENT.

Established 1817.

JOHN KNOWLES,

HAWLEY NEW WHARF,

HAMPSTEAD ROAD, CAMDEN TOWN, N.W.

Fire Bricks, Tiles, and Linings of Ovens, &c. made to order on the shortest notice.

Crucibles and Cupels of the Best Quality and for Exportation.

EVERY ARTICLE MANufactured AT THE ABOVE WORKS.

N.B. These goods are supplied to the largest Steel Smelting, Armour Plate, and Crucible Works in the World, to which references can be given on application.

TO BRICKMAKERS.—All Parties who

BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr. ROBERT WHITE, and which may be seen in operation at the Brickfields of

J. B. WHITE & BROTHERS, Erith, Kent.

The advantages of this plan are two-fold.

1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 35 to about 10 per cent of the total make, which in itself represents a large permanent saving.

2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.

Licenses for use of the Patent granted to Brickmakers, on application to the Patentees, 17, Millbank-street, Westminster.

TO BRICK-MAKERS, BRICK AGENTS,

and OTHERS.—WANTED, about 100,000 STOCK BRICKS, delivered at or near the Bricklayers' Arms Station.—Apply to Mr. F. KELLY, 17, Great Charlotte-street, Blackfriars-road, London.

BATH STONE OF BEST QUALITY.

RANDELL & SAUNDERS, Quarrymen and Stone Merchants, Bath.

List of Prices at the Quarries and Depôts, also Cost for Transit to any part of the United Kingdom, furnished on application to BATH STONE OFFICE, CORSHAM, WILTS.

BATH STONE OF THE BEST QUALITY.

PICTOR & SONS, Quarry Proprietors and Stone Merchants, Bath.

Lists of Prices at the Quarries and Depôts, also Cost of Transit to all parts of the Kingdom, forwarded on application to BATH FREESTONE WORKS, BOX, NEAR CHIPPENHAM, WILTS.

VIEILLE MONTAGNE ZINC.

THE ITALIAN-FORMED ZINC is much approved of by Architects and Engineers on account of its strength, durability, and appearance. On account of the light framing required, roofs, including framework and fixing, can be covered with it FOR £3 PER SQUARE up to 25 feet span. Whether sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

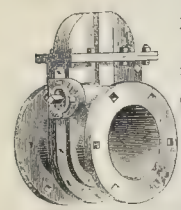
EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,

WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London Atmosphere.



ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Whether sold under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,

WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

A. W. FABER'S POLYGRADE LEAD PENCILS.

Sole Agents, HEINTZMANN & ROCHUSSEN, 9, Friday-street, E.C. SOLD BY ALL STATIONERS AND ARTISTS' COLOURMEN.

The Builder.

VOL. XXII.—No. 1097.

"Going Along." The Simplon Pass: Lausanne.

CALLED early, the luggage well packed, and all things arranged for a long journey and a night on the mountains, we take the road from Arona for the Simplon Pass, and have plenty of opportunity as we proceed to comment on the miserable taste shown throughout Italy, especially in their painted house-fronts. Anything more atrocious of their kind than these n scarcely be imagined. Between Arona and aveno granite quarries are met with, where en are engaged on column-shafts 16 feet long, d other large masses. The road shows the revalence of granite; the telegraph-wires e carried on shafts of it, 17 or 18 feet in ight, held up by cross pieces of the same aterial. We are now, however, to go along st, saying nothing of the fine porphyry-oloured mountains, with green trees interixed, that meet the sight, and giving no etails of Domo d'Ossola, where we sleep. he customary five horses rattle us out of it the morning, and then it is all up, up, up, nidst scenery that has often been described, t can never be adequately conveyed by words the mind of those who have not seen it. very one knows the road was commenced by der of the first Napoleon, and has not been ished sixty years. It includes more than 600 idges, and miles upon miles of masoned ter-ces. In places the road is cut through the anite mass, parts above overhanging. The cks are splitting and falling in every direction ith "mountainous o'erwhelming;" huge masses ing scattered about as if the Titans had been aying at "chucky-stanes." Here and there hole

> "——— mountains have fallen,
> Leaving a gap in the clouds;"

d filling up the valleys with destruction's linters. Here we have a waterfall; there a ock of goats. By the side of the road for miles ashes, and foams, and gambols a roaring torrent, ver,—

> —"Scatter'd heaps
> In ruin thrown,
> Wild desert shapes
> Of rock and stone."

verywhere Alps o'er Alps arise. The scene sternly magnificent. It is interesting to notice we go, evidences of the powers that are in peration to abrade the mountains, and produce country fit for cultivation. The process will ccupy long years, but it is sure. Heat, frost, ind, water, avalanche, glaciers, the action of egetation and of man are all playing their part gradually effecting the revolution. Within a ry few years soil has been formed wherein plants nd trees now flourish, where before was only ony barrenness.

On the road hither, men and women, inhabi-nts of Alpine valleys, are met suffering from oitre, or, to use the more technical word, *ronchocele*, which says in Greek, "throat mour." Surely it is discreditable to the science nd humanity of the country that this fearful isease, to say nothing of cretinism which ac-ompanies it, should be suffered to afflict, as it oes, whole villages, generation after generation. appears tolerably certain that it depends on he bad condition of the atmosphere breathed. f knowledge were spread teaching on what the disease depends, and how it might be avoided, the evil would in time be lessened. In certain places where goitre always prevails, if there be no known means of rendering the spot healthy, people should be forbidden to dwell there, and prevented by the State. They ought no more to be permitted to entail on their helpless offspring a foul and frightful disease, than they are to administer poison to them, or to cut off their legs. We are not without the scandal in England.

Where we enter Switzerland a stone pillar by the roadside marks the division from Italy, and a few miles beyond we meet with a small bridge over a yawning chasm, and which is said, popularly, to be prepared with gunpowder ready for destruction on the approach of an enemy: certain it is, at any rate, that a parapet wall on the opposite mountain-side affords good cover for riflemen to pick off an advancing foe.

At starting, the heat had been excessive; a day before scarcely bearable: but this state of things had changed; and when we reached the inn at Simplon, a wood-fire mouldering on the hearth, but speedily replenished and made to blaze, was a right pleasant sight, and a great comfort. A heap of the *Illustrated News*, and a pianoforte, that did not long remain unused, gave the room a look of home; and a capital dinner, including chamois steaks, was eaten jovially, with the thick clouds around us and the rain knocking impatiently against the window-panes: a wild look-out, but great contentment within.

A few miles farther on, and we reach the summit of the pass, barren and hard; a few miles more, now descending, and we are at the Hospice, an establishment somewhat similar to that on the Great St. Bernard, where belated or befogged travellers may pass the night in good rooms, and be well attended to. The monks who tenant it are of the Augustine order, and agreeable persons.

The ride thence to Brieg, entering on the Swiss mountains and long extending valleys, is delightful: the sun has again come out to show the beauties of the district. Most luxuriant foregrounds are capped by snow peaks and glistening glaciers, of which latter, by the way, in the Swiss Alps alone 608 have been counted. The roads are admirably formed and kept: in a few cases covered with a building to protect travellers from the constantly recurring avalanche,—"the thunderbolt of snow." In one instance, perhaps more, the roofed-in road passes under a vasty waterfall which is guided over it, and then, first forming a curtain of water before one of the openings of the gallery, falls away, thundering, to a depth below.

At Sion, noticeable for its castles, admirably placed, and forming fine pyramidal groups, we get the railway (opened in 1857) for Villeneuve at the eastern end of the Lake of Geneva. The tower of the cathedral at Sion is early in date. The church of St. Francis, late Gothic in style (dated 1516), has a porch, built in 1546, the stones of which exhibit on the face Masons' Marks,—the latest we remember. The number of passengers on the line was considerable (so were the stoppages), and here we met many Alpine travellers—more or less Alpine travellers,—all, at any rate, with alpenstocks of the best "brand;" sometimes suggesting, to inquiring minds, a quiet doubt whether "Pilatus" or "Rigi," burnt into a stick, would be admitted as proof in a court of law that the owner thereof had been at the top of the mountain aforesaid. How many of these tourists had waited and waited for what they were not permitted to behold? and which of them was it who sang,—

> "Nine weary uphill miles we sped,
> The setting sun to see;
> Sulky and grim he went to bed,
> Sulky and grim went we.
>
> Seven sleepless hours we toss'd, and then,
> The rising sun to see,
> Sulky and grim we rose again;
> Sulk and grim rose he."

The Swiss want sanitary knowledge terribly much. Round about most of their picturesque, but often trumpery and ill-cared for cottages, lie heaps of refuse and manure, tainting the sweet air, and so warning the instructed nose of the danger there existing. Notwithstanding some rubbish to the contrary talked at the Edinburgh Congress of the Social Science Association, a bad smell, nine times out of ten, shows evil and dangerous conditions. To a nasty odour, as to more positive pain, we ought to feel grateful: it shouts with all its voice, "Look out, my boy, you are on dangerous ground." Pain is, in truth, one of man's best friends, and, like many other true friends, is not half so well thought of as it should be. Eat something injurious, and pain at once calls out for physic for you; run against a sharp point, and the same sentinel says, "Mind what you are at, or you will touch a vital part;" or get a bullet in your body, and the ever-watchful guardian says, "Let this be taken out, or you will certainly die." Pain is a real good friend, who should be listened to carefully and regarded gratefully; not abhorred and grumbled at. However, we have nothing to do with pain just now. Villeneuve and the "Hôtel Byron" there, with its charming gardens overlooking Lake Leman, bring thoughts only of pleasure. To the left are the mountains of Savoy; to the right, reposing in the lake, is the Castle of Chillon, made by patriotism and poetry a place of world-wide resort, a shrine for countless pilgrims. When Byron says, as every one knows he does say,—

> "Lake Leman lies by Chillon's walls;
> A thousand feet in depth below
> Its massy waters meet and flow;
> Thus much the fathom-line was sent
> From Chillon's snow-white battlement;"—

he exaggerates the profundity of the water at that particular point, where, being at the narrow end of the lake, and close to the shore, a depth of 350 feet is nearer the truth; but more westerly, and in the centre, the late Sir Henry Delabeche, in 1827, found the depth that Byron gives, 1,000 feet, as nearly as might be. Seen in the daytime, the adjective "snow-white" scarcely applies to the castle, but by moonlight the term is precise. As we saw it, at such a time, it was a swan on a sea of ink: though this might have been an accidental effect, for the night was exceptional, including in its phenomena what we should be disposed to call the simoom rather than the sirocco, for the wind was dry as well as hot, and suggested sandy deserts heated intensely by the sun. The effect of this hot wind was singularly curious.

In Chillon Castle there are several things to be seen besides the actual prison of Bonnivard, its inmate during six years till 1536: such as the chambers of the Duke and Duchess, with painted walls and ceilings; the Hall, also adorned; a so-called *oubliette*, and a place of torture. The prison, partly formed in the living rock, is about 120 feet long (thirteenth century), with a row of columns along the centre which form a slightly curved line. Nearly all the stones of the one column to which Bonnivard was chained show, as the Mason's Mark, the pentacle. Amongst the million names which have been written on the pillars since Byron placed his there, we noticed those of Victor Hugo, "Geo. Sands," and Mr. Dana.

The railway that runs all round the lake on the north bank makes Lausanne an easy trip from Villeneuve, and this pretty place should be visited for the sake of its very fine cathedral even by those who would not care for its picturesque position or desire to see what remains of the summer-house and garden where Gibbon wrote the last lines of the "Decline and Fall," as he himself so touchingly tells. This incident alone, however, takes thousands to the place, such is the interest felt by man in man and man's work. It was in 1787 that the great historian finished

his work here. In 1793 he returned to England on account of the Continental troubles; and in February of the following year he died while on a visit to Lord Sheffield, at Fletching, in Sussex, and was buried in the parish church there. One caution we give intending visitors to Lausanne, and that is, not to expect any civility at the Hôtel-Gibbon if, as passing travellers, they call there desiring, say, only a dinner.

Professor Willis has pointed out some of the peculiarities of the main columns, the arches, and the groining of the nave of the cathedral. The eastern apse contains the most beautiful set of Romanesque capitals, belonging probably to the end of the eleventh century, that we remember. The Romanesque caps to the short columns of the arcading throughout the nave-aisles have been "restored" into Corinthian capitals! The stones everywhere, in both the eleventh and the thirteenth century work, present a rich harvest of Masons' Marks, very various in form, but in many cases precisely similar to some observable in the cathedral of Geneva, to which we shall refer by and by. The body of the church, Pointed in style, with a fine handsome interior, the triforium practicable throughout, is of the thirteenth century. There is a remarkable rose-window in the south transept, and the same term may be applied to the large south porch, which has three gables and a spirelet at the junction of the three roof-ridges.

Some carved wood stalls, by the way, against the south wall, in the nave, dated 1635, display German Gothic tracery. The cathedral being on very high ground, covered flights of steps have been made to lead up to it at one end, and produce a picturesque feature: indeed, much of Lausanne is remarkably picturesque; beautiful views, including the lake, abound; many elegant residences are scattered about, while new ones are building; and at Ouchy, its port, where there is a very large new hotel (still, never large enough during the season), the steamboat touching, as it passes up or down the lake, gives additional life and animation to the scene. We use the boat to return to Villeneuve, and there once more enjoy from the parapet of the gardens a glorious moonlight on the vast expanse of hill-encircled waters:

——"The rocks in prospect rise,
A flood of glory bursts through all the skies."

Moonlight, while it softens and beautifies what it touches, disposes the mind to regard with a tender interest all that is seen. It thus operates towards the same end in two ways.

The next chapter must close our relation.

STAND TO YOUR GUNS.

WHITWORTH *v.* ARMSTRONG AND OTHERS.*

The true and original invention of ordnance (smooth-bore) has, with much plausibility, been ascribed by Milton to Satan himself. With all the *super*natural interest of an inventor in the progress of his invention, Mephistophiles has doubtless kept pace with the times, is well up in practical engineering in its application to guns, and is thoroughly acquainted with all the intricacies of rifling, twist, breech- and muzzle-loading, initial velocity, initial tension.——But all the high-minded and patriotic inventors of ordnance say that every improvement of ordnance is a step towards the Millennium; "as the deadlier the weapons of warfare become, the less is the chance of war being undertaken, or, at any rate, long continued." We rather doubt this sophistical and flattering belief, and could bring many practical counter reasons. But supposing this argument to be true, then it would indeed be strange if the Enemy of Mankind should take much interest in the progress—even by such a queer path—of the children of men towards universal peace. For,—

..... "der Teufel ist ein Egoist
Und thut nicht leicht um Gottes Willen
Was einem Andern nützlich ist."

But the history of improvement in ordnance during the last ten years would have a special interest to its Original Inventor, quite independent of its scientific side. For a curse,—the curse of strife—seems to have fallen on almost all connected with this march of progress. We have noticed it to be a popular belief in many countries, that the inventors of instruments of destruction and torture are sure themselves to die a violent death. It is to be hoped that none of the very amiable as well as able men who have of late years given their attention to the improvement of ordnance will undergo such a fate. But it is a remarkable coincidence that our great-gun men do certainly not lead pleasant lives on their uneasy eminence. Nearly three millions of pounds sterling have been spent, amidst the execrations of the nation, on the original Armstrong gun—now literally "shunted" on one side. Mr. Whitworth has spent—well, we should be afraid to say what Mr. Whitworth has spent on his cannon. His artillery battles, and his fights on paper with Sir William Armstrong, have been a perennial source of excitement to the most *blasé* newspaper reader. Mr. Whitworth's rejected offer of his guns to the Emperor of the French—at a time when there was every belief that an attempt would be made to re-import them in a forcible manner—was an interesting instance of Manchester patriotism. The gallant Captain Blakeley is another doughty champion in this artillery warfare. Captain Blakeley believes that both Armstrong and Whitworth have pillaged his invention, and picked his brains. It is fortunate that duelling is no longer fashionable, otherwise—if we are to judge from the epistles from the gallant captain which have appeared at various times, within late years, in the public prints,—a not merely practical, but also personal test, would have been required by Captain Blakely. He also finds that the British Government "has forfeited all claim to his consideration," and he intends "that in future all his skill" shall be at the service of foreign Governments. Mr. Lancaster—one of the ablest of gunmakers—will be scarcely delighted with his career in the improvement of ordnance. The histories of some other gun inventors have been written in the annals of the Bankruptcy Court. The whole career of ordnance improvement during the last decade is of a most extraordinary interest, whether from a scientific or a social point of view. The Battle of the Guns would, indeed, call for a scientific and mechanical Homer for its bard. One of the most remarkable appearances in the contest has been the never-ending and still-existing disputes about priority of invention. The history of invention has yet to be written, and the philosophy of invention is yet undreamt of; but our opinion about true and original invention is that of the witty sage, Sydney Smith, who says,—"It does not follow that a man is a discoverer of any art merely because he is the first to say the thing; but he who says it so long, and so loud, and so clearly, as to compel mankind to hear him. It is the man who is so deeply impressed with the importance of his discovery that he will take no denial; but, at the risk of fortune and fame, pushes through all opposition, determined that what he feels he has discovered shall not perish for want of a fair trial." We have watched with much interest the progress of late years of modern artillery, and can conscientiously witness to the truth of Sir Emerson Tennent's remark, that there is "not a single feature in the recently patented improvements in gunnery that has not been the object of contested claims and vituperative animosity." Let honour be given to him who really brings the invention into such a shape that it is worth disputing about.

Sir Emerson Tennent is not quite fit for the task he has undertaken. With all consideration for his accomplishments, we cannot help seeing that he evidently neither possesses the deep knowledge of science, nor is master of the sound mechanical practice required for the undertaking. Above all, he has not exercised the logical and judicial faculty that would have prevented his being a partisan. He does not possess the power of saying "no," when a sharp Manchester man takes him by the button-hole, and persuades him to say "yes," to lending the power of a distinguished name to the furtherance of what is, after all, a commercial undertaking, no more connected with patriotism than selling broomsticks. "The Story of the Guns" is simply a popular, readable apotheosis of Mr. Whitworth, of Mr. Whitworth's rifle, of Mr. Whitworth's shot, of Mr. Whitworth's gun,—in one word, of Mr. Whitworth and the Manchester Ordnance Company's cause. Of course, Si Emerson Tennent's position is above that of a partisan for this or that man's gun; and hi partisanship is that of an honest and ingenious English gentleman, who is delighted with things that he only superficially understands, an acquaintance with which he has only made lat in life. But this book is another experiment o the ridiculous and absurd popular notions o mechanical men and matters. What are thes latter-day improvements in artillery, the echoes of which have thundered from Shoeburyness in the columns of the press? Simply and merely th application of the steam-hammer and the slide rest to the manufacture of big guns. Who i Mr. Whitworth? A long-established Mancheste tool-maker. He is a very good workman, and a excellent man of business, and his long standin has enabled him to charge long prices for hi machines,—as we English always believe tha abilities are like cats, that adhere with all th force of nine lives to old houses. The professio does not think much of his machines; it is wel known that as good or even better tools ca now be got from other firms, and for less prices The machines exhibited by Mr. Whitworth a Kensington were the worst designed in th whole Western Annexe, and they showed littl or no advance upon those he sent to the 185 Exhibition. If we had to choose between Si William Armstrong and Mr. Whitworth, w should very much prefer Sir William, who although his gun is in a great measure a failure has the inventive and philosophical faculties in considerably higher degree than Mr. Whitworth The success of his rifle may be said to hav spoilt Mr. Whitworth as a maker of ordnance. rifled cannon is only in a popular sense a larg rifle. The two problems are almost totally dis tinct. It is now, after millions have been spent generally known that the great difficulty i simply to make a heavy gun strong enough t bear some 30,000 lb. pressure per square inch created by the explosion of powder. Neithe Whitworth nor Armstrong heavy guns have suc cessfully fulfilled this absolute condition of suc cess. Captain Blakeley has not pinned his nam to any particular system of rifling, but to him i undoubtedly in a great measure due the demon stration of the value of "reinforcing" th strength of the gun breech by shrinking o forcing thereon a wrought iron or steel ring— thus bringing the breech into a state of "initia tension," to meet the explosion of the charge.

To those wishing for a pleasant, popular ac count of the modern improvements in ordnance we cannot do better than recommend this book, a the same time cautioning them against its to evident bias in favour of Mr. Whitworth. We hav not space to enter into the subject of ordnanc with any satisfaction to ourselves. It is a sub ject in a great measure protected from th popular eye by its very complication. A mass o blue books, reports, letters, rejoinders, and coun ter-rejoinders, cover it up, and hide it away lik a needle in a bottle of hay. Sir Emerson Ten nent's book is divided into three parts:—the firs is devoted to the development of the Whitworth rifle; the second to rifled ordnance, and is sub stantially the apology of the Whitworth rifle gun; the last portion of the work is mainly relation of how "Whitworth projectiles pene trate iron-clad ships," and how "the Whitwort shells penetrate armour plate." Occasiona little blunders show that Sir Emerson Tennen is but a novice in practical mechanical matters.

Such is, *e.g.*, his description (page 49) of th steel used by Mr. Whitworth (ironically calle "homogeneous iron"), as "a mild kind o steel." Or "Devereux" for "Daverel" at page 5 At page 178 we find Sir Emerson Tennent th exponent of the popular delusion that a hamme (say) weighing 50 tons, and falling 10 feet "accelerated by steam acting above, strikes blow *equal to* 2,000 *tons weight*. Impact is thu represented by pressure." (!) Further on we fin something quite beyond us. There is a peculia flash of light generated whenever a bullet strike an iron target. This is accounted for by Mr Hulse, of Manchester (whom we believe to b Mr. Whitworth's manager), by the suggestio "that the carbon contained in the plate and th highly carbonized projectile, being *driven out* (by the collision, and combining automically wit the atmospheric oxygen, is ignited by the hea generated by the concussion." Well done, Mr Hulse! This is an interesting instance of th danger of a little knowledge, and its liability t make a man ridiculous. Does Mr. Hulse suppos that the carbon in the carburet of iron we cal steel is in little separate bits of combustible?

* The Story of the Guns. By Sir J. Emerson Tennent, K.C.S., LL.D., F.R.S., &c. London: Longmans, 1864.

e fact simply is, that heat, however generated, her by percussion or by any other means, vays accompanied with more or less light— gh what is heat? or what is light? are very ent questions.

is a remarkable circumstance that we owe perhaps most important discovery of the -Bessemer steel—to the exertions made by Bessemer to procure a good metal for guns. om all the experiments in ordnance of late , the acquisition to engineering of the mer process were our only gain, this alone l be sufficient to remunerate the country he time and trouble spent on these heavy

It is, indeed, in the direction of improved llurgical processes that we must look for mprovements in our heavy ordnance. All orities are pretty well agreed that the par- r method of rifling used is of little impor- *per se*, so long as accuracy and durability t neglected in its construction and design. ittle is now left to be achieved in the field rdnance improvement by ingenuity alone. less ingenuity and the more simplicity a gun the better. Only those well pro- with capital for costly experiments can in future for any success in this line. The three competitors now really left in the may be said to be Armstrong, Whitworth, Blakeley, all three of whom are at the head tensive companies, and with, practically, t unlimited means at their command.

RESCO PAINTING AS A SUITABLE MODE OF MURAL DECORATION.

SOCIETY OF ARTS.

Wednesday evening last a paper on this ct was read by Mr. J. Beavington Atkinson. ke from it some passages:—

enty years ago the Royal Commissioners e Fine Arts determined that fresco painting t be applied with advantage to the decora- f the Houses of Parliament. The benefits promised from the adoption of the process either by fatality or fault, failed in realiza-

After labours extending well nigh over a er of a century, the commission is dissolved, rescoes are in decay, and a new method, im- l from Germany, has obtained the ascend-

The frustration of hopes reasonably ained, that in the revival of fresco painting y and great era was about to dawn on our al arts, now comes as little less than a lity on the country. It had been thought that le of mural painting which the practice of reatest artists of the Middle Ages had proved durable, economical, and architectonic, , with success, in these our modern times, plied to the internal decoration of public municipal buildings in the metropolis and ncial cities. I repeat that any disappoint- of this well-grounded anticipation must be ded by architects, painters, and art work- s no less than a calamity, for it is manifest f we allow a hostile verdict to be given st fresco painting, a large field which was to art development high in style and popular wide area of its teaching and appeal, be- practically closed. I, for one, will rebel st any such fatal judgment. The hostile t, if verdict there be, has been founded on l and insufficient evidence, and I think good service will be done to the cause of st art by the attempt which I shall now ed to make, to marshal concisely and y the facts of this fresco trial, just as they

It will be seen that the experiment was ade in England until after mature delibera-

It will be shown that any failure or decay frescoes executed at Westminster is partial, within the reach of remedy; and the con- n, we believe, will come as irresistible, that ethod which, in the hands of Raffaelle and elangelo was the vehicle for the noblest hts, is still an art fitted for all time, in the arm that is strong will rejoice, and ind that is large must glory.

is scarcely needful that the well-known ss of fresco should be described. In order, ver, the more clearly to comprehend the facts case as they at present stand, a short ex- tion may be desirable. I will call your tion, then, to three several important points ich frescoes contrast with oil painting and pictures. First, as to the material or sur- pon which the artist works. Easel pictures ainted upon panels or canvas, the recipient e being dry. In contrast, frescoes are painted on a wall, the surface of which is wet: hence the term fresco—fresh, or newly laid. This is the fresco *buono* or *puro*. However, the practice of the Italian masters admitted of certain latitude. A large composition, for example, might, in the first place, be laid down, in its breadth and simplicity, upon the mortar while moist, and then touched up and finished when dry by the secco or tempera process. And this liberty which the artists of the Middle Ages were permitted ought, I think, to be, and indeed has been, extended to our modern practitioners. Accordingly, I shall feel justified in using the term fresco in its more popular and extended sense, as a mural painting begun upon the mortar while wet, but oft-times elaborated and finished after the wall has become dry. This, and possibly other minor modifications, were, in the original fresco eras of Italy, as in the modern and revived epoch in Europe, matters of personal convenience, and nothing more. Certain artists, of sure and rapid hand, had found themselves, even in the first sweep of the brush, certain of the desired result, and hence their works would need no retouching. But other painters, more sensitive and timid, discovered that it was needful to revise their compositions, even as an author his proof-sheet prior to publication. By such retouching and revision, however, when kept within legitimate limits, the original thoughts and style of the painter or writer suffer no absolute reversion. In other words, the fresco, in its largeness of treatment, in its immunity from surface gloss or varnish, in its brilliancy and power to give off light, is scarcely to an appreciable extent prejudiced. But I think it is generally admitted that the less of secco retouching the better; and I have no hesitation in saying that some of the frescoes in the Houses of Parliament have, by the inordinate laying on, probably both in fresco and secco, of opaque body colour, lost the transparency and the pure liquid quality by which the lovely works of the best Italian masters are distinguished.

Easel pictures, as I have said, are on panel or canvas; fresco paintings upon wall; and this difference in first foundation involves a corresponding contrast in the causes which secure durability or accelerate decay. Canvas may rot; worms eat away a panel; and not less does the mortar, in its constituents of sand and lime, become subject to chemical agencies which conspire for the picture's overthrow; and these agencies, which were not in abeyance in the Middle Ages, are of course active still. They have occasioned, as we shall see, the partial destruction of the frescoes at Westminster, as they had already wrought the demolition of like works in Italy. But this failure, when it overtook the painter of old, only served as a caution to greater care: never was it permitted to annul a method which in the hands of genius had been proved capable of grandest results. A like persistency in the pursuit of a noble end would well become our English artists. . . . . .

Such being the inherent dignity and worth of fresco, we cannot be surprised that the Royal Commissioners of the Fine Arts, with the late Prince Consort as their chief, should have deemed the adoption of the process as singularly suited to the decoration of great national buildings—a method, let me add, which could receive no more timely revival, than at the period when architecture, taking to renewed development, craved from sculpture and painting consonant aid a style which, by its largeness, and by the extent of its historic range, seemed peculiarly fitted to impart to our English school a much-needed power, mastery, and grandeur.

Accordingly a trial of the ancient art of fresco was, as we all know, made under high auspices, in the Palace of Westminster. I have just closed a rapid survey of the process in general, and now proceed to the details of the actual experiment which has been made in this country. . . . . .

We must now enter on the most difficult, not to say distressing portion of our subject,—the decay of works which had entered upon a life so bright in promise. It is best, in the first place, that facts should simply be stated, without any conjecture as to causes.

We have spoken of three separate series of pictures, each to be found in a distinct locality. One group is in the House of Lords; a gallery of historic works runs along the corridors; thirdly, illustrations of the poets occupy the Upper Waiting Hall. These last have suffered most severely, therefore will best serve as examples for the general description which I at once proceed to give. A close and detailed examination of these works will reveal distinct stages, and, probably, different processes of decay. An early and premonitory symptom of disease would seem to be a blooming or frosting of the colours, which thus become as if mildewed. This affection extends, and then the pigments undergo further change, and begin to fall from the surface of the plaster. Sometimes the process of disintegration would seem to have an external origin, possibly arising from the atmosphere. In other instances the agencies of destruction appear to be internal, dependent, probably, on the constitution and constituents of the mortar. Certain portions of the fresco are upheaved by some inner rebellious force, as if antipathies had sprung up between lime and sand and pigments. In this disruption, as in the other phenomena of decay, several stages may be marked. The incipient traits of the distemper come in mitigated form. At first, the fresco may give signs of dissolution simply by the colours having lost their fixity to the wall. The reds, the yellows, and the blues will come off when rubbed with the corner of a white pocket-handkerchief: spots or pimples may here and there be seen on the surface: these become aggravated into blotches, extending into confluent sores, so that the very tissues of the picture are eating and rotting away. Then it is that large blisters heave bloatingly on the arms, neck, and face of the figures, till at length the pictured forms peel off bodily, and fall as dust and ashes to the ground. Yet this destruction, though terrible just where it sets in, is far from universal. And this its essentially partial character we must in the present inquiry never for one moment forget. Partial effects point to like limitations in their causes; and causes which can be stayed in their operation admit of counteraction. Most worthy, indeed, is it of remark, that of two adjoining pictures one shall have suffered ravages, while its neighbour shall be saved all but harmless. Furthermore, in the same fresco some colours have stood, while others have fled. In one picture, for instance, a blue dress remains firm, while a patch of brown close by has been dissipated. In another case, the light green sleeve of a woman's dress is peeling off to the thickness of cambric, while the body of the same dress, being painted with modified materials, lies hard to the wall. It is, then, I repeat, of great importance that we should mark that the decay is, after all, but partial in its extent. Yet, after making this fair concession, I am bound to say, that of all the sad cases in which premature death has overtaken youth and beauty, this is one of the most melancholy. In Italy I have known frescoes which have suffered cruelly from wind, rain, cold, and burning heat, or the reckless violence of man. Still they struggled on, and have survived for centuries. But these hapless offspring, cradled in an upper waiting-room, have barely entered on their teens: two decades are not complete since they saw the light. Surely we may well pause to ask by what fault this judgment has fallen on our labours.

As to the precise causes of decay, little, unfortunately, is known. A committee was appointed early in 1862, under the presidency of the First Commissioner of Works, to inquire into the condition of some of the frescoes. This committee consisted of Sir Coutts Lindsay, Mr. Gambier Parry, the late Mr. Le Strange, Mr. Ruskin, and Dr. Hofmann. The paintings, not only in the Upper Waiting Hall, but throughout the building, were carefully and repeatedly inspected, and various artists and other competent witnesses examined. Yet we are told that the committee "have not been able to arrive at any satisfactory result." Rough notes were taken of the proceedings, but no report had been issued; and the committee is now defunct, leaving as the only record of its labours a well-considered letter from its chemist, Dr. Hofmann. "The general theory," says Dr. Hofmann, "of the fixation of the fresco assumes that the surface of the finished picture becomes coated with a pellicle of carbonate of lime, which protects the painting like a varnish. Carbonate of lime being practically insoluble in water, but soluble in water containing free carbonic acid," the question was naturally suggested whether the carbonic acid and water generated by the combustion of coal gas and by respiration might not have occasioned the deterioration of the paintings at Westminster. Accordingly, by way of experiment, a stream of water saturated with carbonic acid was allowed to run across the face of a fresco. We are told that after twenty-four hours the effect became very visible; that the colours grew paler and paler; and that,

after the lapse of some days, the pigments were actually colourless. Dr. Hofmann proceeds to remark that, though he was not in a position to offer a definite opinion regarding the true cause of deterioration in the frescoes generally, he has yet been led to the belief "that the injuries are partly attributable to the fact of the surface of the wall having, in too many cases, been too long exposed to the action of the air, and thus become carbonated before the paint was put on. To use an intelligible, although not absolutely correct, mode of expressing it, the picture was put *upon* instead of *under* the protecting pellicle." This valuable letter, then, from Dr. Hofmann, which I shall proceed shortly to examine, is, I repeat, the only known result of the committee's labours.

This committee no longer exists: the Royal Commission itself is dissolved: the frescoes are allowed to proceed steadily in course of decay; and the only remedy taken is the abandonment of the process. This, the present state of the case, I deem, as I have already said, most disastrous. Discouragement has thus laid hold of professional men and the general public; and the progress of the arts, I fear, has thereby suffered material check. On the purely chemical causes of the decay, which we all deplore, I shall say nothing, partly because I am wanting in the needful knowledge, and also because the investigation which alone could give value to a judgment stretches far beyond the limits of private and individual labour. The subject is of public importance and moment, and ought to be undertaken on public grounds, and at the general expense. I shall not attempt, then, to exhaust this question, which is indeed inexhaustible. One thing only I will do, which at this moment ought to be done promptly and positively: I will endeavour to prove to you that the reversal which has been sustained at Westminster should in no way militate against the further adoption of the fresco process, either in the metropolis or the country at large.

In the first place, it may be well that we should mitigate our surprise that these frescoes have decayed at all. It has been too much the fashion to hold the art as indestructible, as if indeed any art could be imperishable. Pictures of all kinds are endowed with constitutions proverbially sensitive, and the utmost that can be hoped for is that a stamina may be gained sufficiently robust to hold up in some degree against the ravages of time. But absolute immunity from decay is obviously unattainable. The mural paintings in Egypt, at Pompeii, and in the Baths of Titus, in Rome, have suffered injury: the mosaics in front of the cathedral at Orvietto, and in the façade of St. Mark's, in Venice, have fallen away and been restored; the panels and the canvas of oil pictures rot; and so in like manner it has been always known that the frescoes executed in the Middle Ages were amenable to special agents of destruction.

That English artists and English patrons need feel but little discouragement from the failing of materials or the fault of climate, it is easy to show. We have already said that the fewer, the simpler, and the more natural the colours used, the better. The painters of the Middle Ages knew no royal road where pigments might be picked up ready for their use. The practice of these men was the growth of patient experience: their ultimate success was purchased at the cost of repeated failure. The materials they used are known to us, and lie within our reach; and modern science, to boot, brings to our aid far-searching eyes and wide-spreading hands. Any artist, then, who shall be heard to utter complaints against his materials may be at once put down with the workman who quarrels with his tools.

As to faults in the English climate, or the vicious elements in our town atmospheres, there has been more talk than the facts of the case warrant. I have suffered from cold and damp in the chapel of Giotto, in Padua, to an extent that could not possibly be experienced in the halls and corridors of Westminster. I have seen, in Pisa, frescoes streaming with rain and condensed moisture; and yet some of the pictures executed by Benozzo Gozzoli, about the year 1450, are as fresh as if painted yesterday. In Munich, the centre of the German revival, the snow lies for three months of the year, and the streets are traversed by sledges. Furthermore, we should bear in mind that in northern Italy and southern Germany it has been deemed no madness to brave the bold experiment of fresco-painting in the open air. In England we have ventured on no such rash attempt. All the mural paintings hitherto executed in London or the provinces have been safely housed. Our much-abused English climate, therefore, which is usually made responsible for the sins of its inhabitants, offers no absolute impediment to the practice of the fresco art.

In like manner the injurious effects ascribed to the noxious elements with which our city atmospheres are loaded have been greatly overrated. At all events, it may safely be asserted that the destruction of the frescoes in the Houses of Parliament is to no appreciable extent to be ascribed to such agencies.

The best, because the most practical answer which can be given to the objections touching climate and populous towns, is in the simple fact that certain frescoes painted in the metropolis are still in a good state of preservation. I have, for example, carefully examined, with a powerful opera-glass, Mr. Watts's fresco in the dining-hall of Lincoln's-inn, and find, with the exception of one or two square inches, that its vast extent of surface is still intact. Mr. Watts has shown me frescoes executed by him in Little Holland House: I have also seen rooms of a mansion in Carlton-terrace decorated by the same artist; and the colours in all these examples are just as fast as when first painted. Again, Mr. Armitage some years since painted a fresco in a chapel at Islington, and that, too, lies firm on the wall, and the colours are unchanged. Such instances are sufficient evidence of the practical knowledge of our English artists, of the soundness of materials at command, and of the benign temper of our English climate.

The interest of high art demands that some recognized authority should put an end to the present state of uncertainty, so perplexing to painters and bewildering to the public at large.

The manipulation of fresco is simple, and the conditions for ensuring its permanence cannot surely be difficult to discover. And yet, in the absence of any constituted tribunal entitled to pass a judgment, the entire question of mural decoration is left in doubt and confusion. The Royal Academy has never in these matters taken that lead which might have been reasonably expected. The Royal Commission, as we have seen, is dissolved; and yet there never was a time when knowledge and guidance were more needed. It strikes me forcibly that in this state of interregnum the Society of Arts could, with advantage, come to the rescue. A preliminary inquiry, entrusted to a joint committee of men of proved knowledge in science and art, might be instituted; a report, decisive in its facts and definite in its conclusions, should then, after due deliberation, be issued. But, in default of any such further and final investigation, advantage might be taken of the accumulated material locked up in Parliamentary Blue Books, and lying dormant in the scattered art-literature of the last twenty years. A "Handbook to Mural Decoration" could thus easily be compiled, which should give to the artist all needful information touching lime, sand, and the preparation of the mortar, together with well authenticated facts relating to pigments, vehicles, and modes of execution. Such a guide would do much to prevent the recurrence of the blunders incident to inexperience.

That the art of fresco is peculiarly noble, monumental, and architectonic, all authorities are agreed; that in its severe and stately forms it is peculiarly calculated to bring to our English school the discipline so much needed, all persons conversant with high and historic styles readily admit. The very difficulties of fresco, says Mr. Watts, are, in the present state of our English school, advantages. The necessity of a definite plan, of a fixed and firm outline; the need of architectural treatment, with its inherent symmetry and severity, all these are not disabilities, but elements of power. Again, the demand for rapid execution renders simplicity imperative, and in simplicity is grandeur. These things considered, it is not surprising that many witnesses examined before the late Royal Academy commission—Mr. Layard, Sir Coutts Lindsay, Mr. Watts, and others—look forward in confidence to the time when the historic deeds which have conferred honour on England shall shine forth upon the walls of our national buildings and municipal institutions; when the beauteous thoughts of our poets shall adorn our literary clubs; when the classic designs of Flaxman shall ennoble our public schools; and when the English mind, which has spoken through Shakspeare and Milton, and which responds to the choruses of Handel, shall obtain, through the noble art of fresco, worthy pictorial manifestation. In fine, that art which was living and so abiding a reality for Italy, ce remain, as at present, in practical Engla mere illusive dream. The transient disho which we have suffered in the too speedy c of the paintings at Westminster must be trieved; and works, I trust, may shortly executed in this country, which will prove the grand frescoes of the Middle Ages, noble enduring.

THE RAILWAY ORGANIZATION OF METROPOLIS.

Something like order and fixed idea are coming out of the chaos of railway projec mercilessly cutting up the metropolis into pieces. The key-note, as it were, of the harm railway chords, was struck by the Lords' mittee; and further investigations by the B of Trade and the metropolitan authorities great extent harmonize with the outlined sch of the Lords. This scheme, if we can sc it, chiefly comprises the formation of two rai rings or circuits, an outer and an inner, o tirely new and intercommunicating lines; system, however, connecting the various met litan stations or termini of existing rail round London; the inner circuit to be a su of which the Metropolitan Undergroun form a part, with stations, such as it has, thro out the circuit. These two rings, especiall inner one; a well-considered line from the ing-cross station northwards, in connexion bably, with some new street project, to junctions between the South-Western line the Great Western, North-Western, and Northern, or the North-Western lines; and through the Thames Tunnel connecting the Eastern and other north-eastern lines wit Brighton and other south-eastern ones, com nearly all that is recommended for the pre so that all the rest of the 417½ miles of ra projects within the metropolitan limits, their 70,000,000*l.* capital, will be swept wholesale as not coming within the sphe these simpler and more reasonable req ments.

The report of the Streets Committee of Metropolitan Board, on consideration of engineer's report, appears to advocate just arrangements. It also concedes the probal that the new embankment may be used, u the surface, by new lines of railway; insists on the surface being kept clear, and embankment carried out in its integrity. railway-bridge to be permitted to cross the below London Bridge, but the Thames Tu to be used if the engineering difficulties ca overcome. The Board has referred this re back to the Streets Committee for further sideration till the question of new railways be discussed by the Board itself at a fu time.

The report to the City Sewers Commis by their engineer, Mr. Haywood, states, there are twenty-three projects affecting City; that within its limits no less than tw miles of railway are proposed to be for involving an area of 211 acres; some of space, however, being the same for different jects; but, in all, requiring an actual are 160 acres, or one-fourth of the entire City! these projects 300 public ways are interf with, and the sewerage of a very large po of the City virtually annihilated! One steers clear of all "public ways," except river, up the middle of which it proposes t as high-minded folks, in times of old, used along the "crown of the causeway." A sing instance of reverential moderation on the pa *all* the projectors is, that not one propose knock down a single church, preferring to c and twist around and about them, rather go straight through them. They are n heedful, however, of churchyards. Mr. Hay considers the extension of railway commu tion to some degree, even through the Cit be inevitable, but requiring the utmost care attention, as affecting the interests of the C

The report of the Board of Trade Comm is very much in accordance with that of Lords' Committee, as to an inner and outer of railways, as well as the other chief re mendations of that committee.

The House of Commons has passed a resol appointing a committee of five to join a si committee of Lords, in order to consider best method of dealing with the whole ques and we doubt not that the valuable repor

h we have referred will greatly aid both ies towards a final settlement of this very rtant matter.

FRENCH MANUFACTORIES.

TURGAN continues his descriptions of the manufactories of France.* This selection fficiently comprehensive to make his series able to various circles. In his first volume ave us accounts of the gobelines; the mills t. Maur; *l'imprimerie impériale*, or vast ing establishment; the candle factory at y, detailing the various processes employed the gathering together of the ingredients rm the *bougies* to their dispersion in the est form of soap and decorated lights; paper-mills of Essone, beginning with the nous picking up of rags by the *chiffoniers* in gutters of Paris and going through the s of sorting, washing, bleaching, and transation from pulp to paper; the porcelain facs at Sèvres; and the Christofle goldsmith's blishment. In his second volume he gives ls of the works of Derosne & Cail, and of machines and locomotives there manufac; of the Arnavon soap factory; of the ; of the imperial manufactory of tobacco; e "literie Tucker," or bedding warehouse; piano manufactory of Messrs. Pleyel, Wolf, .; and the wool-spinning factory of M. Da- The third volume, besides the *livraisons* ing to the St. Gobain manufactory of plate- and La Fondre cotton-mill, constructed by Fairbairn, which we briefly noticed early in ast year, has been made up of information he following subjects;—the manufacture of y the Parisian gas company; the manufac- of portable gas; the printed stuffs of Thierry, Mieg, & Co., of Mulhouse; the *alterie* of Baccarat, with a history of the cation of crystal in France; on the nursery- nds of André Leroy, at Angers; the omni- system in Paris; the great central bake- e of the Parisian *Hopitaux;* and the steel s of Messrs. Jackson.

connexion with the last-mentioned estament, M. Turgan informs us that in all ce the Bessemer process is only applied to manufacture of steel in the *acierie* named. ill be remembered that Mr. Bessemer, in read a paper to the congress of the British ciation at Cheltenham, in which he anced the discovery of his process, by n he can obtain steel in large quantities at siderable diminution in the labour ordinarily and, consequently, in the price. His prowas immediately tried at the Atlas Works, ield; at the works of M. Göranson, at Hozbo, reden, and in India, and is now in use at Saint n. M. Turgan states that the operation in is so strange in its simplicity, so fairy-like aspect, and so superhuman in its results, he can easily understand the hesitation of who doubt its efficacy. Saint Seurin is ntageously situate upon the river D'Isle, e it is confluent with the Dordogne, at which vessels can be easily brought along the s, and there is a fall of water of sufficient r to give motion to five wheels. The natural ilities of this site induced the purchase of Mr. Jackson, who, joined by his father, conted the necessary furnaces, twenty crucibles, and small hammers, flatting-mills, and all pparatus required to convert as much as ilograms of metal at a time into steel.

ter five years' experience they constructed ond apparatus, yielding 3,000 kilograms of steel at a time. This is situate on the nd-floor, and consists of two enormous re- covered with thick sheet iron strongly d, which turn upon pivots in a manner h permits of their adaptation to the exigen- of the manufacture. Between them is a en circular area surrounded by a little *fosse*, hich are placed the moulds which they are red to fill. From the centre of this area a hollow pivot carrying a crane at right s which can be made to descend by hydrauessure at pleasure. An illustration shows minor details. The increased demand for is one of the wonders of commerce, and doubtless lead to still further simplifications manufacture. At a higher price, steel was available for first-class purposes, such as ry, arms, tools, polished mirrors and other ments, needles, and magnets; but at its present price something like five millions of kilograms are used for the single purpose of forming those feminine curiosities Mr. Turgan calls the cages of women (crinolines).

Concerning the development of the manufacture of portable gas in France, our author tells us that the idea of transporting gas in recipients is as ancient as the discovery of its use, having been applied to the lighting of carriages by Murdoch, the inventor of oil gas, in Cornwall. Messrs. Ternaux & Gandolphe, at Paris; Taylor & Martineau, at Lille and Rouen; Dauzé, at Marseilles and Bordeaux, first made gas with oil of resin, fish oils and the greases they contain, at thirty atmospheres, in cylinders of sheet iron or copper of a resistance proportionably calculated; but this apparatus, being costly to construct for so considerable a pressure, was disused. In 1828, M. Houzeau, of Rheims, druggist, tried the transport of uncompressed gas in large ugly carriages each containing a reservoir of varnished linen which was filled when wanted and emptied at the consumers' by means of a roller; but this plan was also abandoned. After several trials a bituminous *schist* was adopted in place of the resins and oils, and was found to give a very rich gas without disagreeable odour, and of easy management. This *schist* is extracted in Scotland, near Glasgow, and at various places on the Continent. It is an aluminous silicate, containing a little iron and potass, and is impregnated between its lamellations with bitumens from 60 to 100 of its weight. But few fossils are found in it, some vegetable acotyles and the cactus leaving only here and there rare imprints. It is carried to Rouen or Dieppe, and thence to Paris, either by boat or rail, doubling its price by the transport. The first process to which it is subject is breakage into pieces of about 5 centimetres cube. It is then distilled in flat retorts, strengthened near their openings with bolts or pins. The retorts are disposed seven by seven, in ovens heated by internal furnaces in which is either coke or heavy tar, the first residue of condensation. When the retorts are heated to a red heat, they are charged, and the process of distillation is then effected in the course of three quarters of an hour. The oils contained in the *schist* are disengaged and destroyed by the intensity of the heat; and the product of the distillation, rising by an ascending tube, is received in a small cask. It has been attempted to utilize the residue of the distillation in various ways: among others, an experiment was tried to use it for the manufacture of porcelain, and as a disinfecting agent in slaughter-houses, privies, and elsewhere. At Charonne it is employed to macadamize the yard. An illustration shows the apparatus of the Parisian Gas Company, with the present arrangement of the twelve pumps, tubes, regulator, and other ingenious contrivances of M. D'Hurcourt, engineer. The most curious part of the proceedings, to an Englishman, is, however, the transport of the gas when manufactured. Most visitors to Paris will have been puzzled at the first sight of the huge waggons, containing a set of sheet-iron cylinders, which, stopping at door after door, provide such of the Parisians with gas as live beyond the limits of the districts supplied by pipe. These cumbrous machines are filled at the gas-works, and emptied at the consumers' in the following mode:—The empty carriage is brought up to the sheds containing the compressing pumps: a tube is fixed, a tap is turned, and the pumps are set to work to fill the nine cylinders contained in each carriage, the openings into which are made to communicate with one another by means of a ramp or brass rail placed in their rear. Tar mixed with paraffine and grease is used as a lubricator. As they are filled, the tap of each cylinder is turned off, and then the tap communicating with the tube which conducts the gas from the reservoir to the carriage, and, finally, the tube, are removed. Then, drawn by two horses, the waggon commences its tour with a load of 63 cubic metres of compressed gas. M. Turgan mentions that it is of particular value in the environs of the capital, in villages where the gas is not current, and in workshops and printing-houses where only oil and *bougies* can be used, because of the flickering movement of the light dispensed by gas conducted through pipes. The consumer receives his supply upon the roof of his house in small cylinders, varying in number according to the quantity he requires. These are made of sufficient resistance to receive the gas at six atmospheres of pressure. An india-rubber tube is attached from these cylinders to those in the waggon, when the gas immediately ascends from the one to the other, passing, in its course, first a regulator then a teller. The gas thus conveyed, although dearer than oil gas, is declared to be superior to it in brilliancy, and to be without the disadvantage of creating intense heat. The increase in the number of consumers since M. Hugon assumed the direction of this branch of industry is, perhaps, a better chronicle of its merits than any other.

In 1855 there were but fifty subscribers: at the date of the compilation of these notes there were 1,157. Eighty-five *communes* are already supplied; but the number of these will be largely increased, if M. Hugon's plan of transporting the gas by rail should find favour in the eyes of the provincial public. Nothing could be easier, he declares, than to convey cylinders full of compressed gas on trucks by rail, or upon boats by canal, and the larger the number of consumers the greater the perfection of the gas, and the smaller its cost. For a small town to go to the expense of manufacturing its supply of gas is a gain made at a disproportionate sacrifice, when the same lengthener of the hours of pleasure or of work could be obtained without a sunken outlay, at a fixed annual rate. It is expected that a further source of profit will accrue to the company when the composition of the tars and other condensed products of the *schist* is ascertained. Observations conducted by M. Payen indicate that the deposit of these is greater in winter than in summer. Besides proto-hydro-carbon and bi-carbonate [of ammonia ?] the distillation produces water, ammonia, carbonic acid, sulphuric acid, traces of oxyde of carbon:—

		Densité de vapeur.	
De l'amylène	$C^{10} H^{10}$ bouillant à	+ 30°	2,450
Benzine	$C^{12} H^{6}$	86°	2,380
Densité liquide	0,850		
Cumène .	$C^{18} H^{12}$	151°	3,960
Eupione ...	C H	160°	
Acide phénique	$C^{2} H^{6} O^{2}$	188°	
Liquide	1,065		
Ampelène	$C^{24} H^{6} O^{3}$		

picotine, aniline, quinoline, pynhol, petiniue, paraffine and *brai* (a matter analogous to asphalte)." These materials are directed to a part of the works devoted to experiments for their utilization under the superintendence of M. Temoine, chemist of the establishment.

Experiments were made by the Eastern Railway Company, in December, 1858, and May, 1859, to employ this gas in the lighting of trains. To prevent the flickering of the gas likely to be caused by the tremulation and oscillation, M. Hugon suggested the use of a case or box, to serve as a regulator. A brilliant light was obtained, which lasted from Strasbourg to Paris, at a cost of about 40 centimes, for twelve hours' consumption.

The account of the Mulhouse manufactory of printed stuffs proves the possibility of commercial enterprise keeping pace with the fleetness of fashion. The firm of MM. Thierry, Mieg, & Co., founded in 1800, escaped without suffering from the crisis which wrecked Alsacienne industry in 1828; but, to maintain its ground, it has found that it is necessary to seize every novel idea suggested by fashion, and to abandon them one after the other when left behind by the caprice of the day. Sixty years ago, the fabrication of chintz for dresses and handkerchiefs, printed with patterns in madder reds and indigo blues, was the order of the day. This was superseded by the dyeing and printing of articles with Turkish or Adrianople red. In the course of forty years these were quite exploded as necessaries of female attire, and the firm took to the manufacture of woollen shawls and silk handkerchiefs, and, subsequently, to the printing of mousseline de laine by hand. These have given way, in their turn, to the printing, in various colours, of newer woollen stuffs,—an introduction viewed with so much favour that the firm have constructed, in the faubourg of Dornach, three enormous blocks of buildings, five stories in height, for the prosecution of the various processes involved. For details of the last-mentioned we must refer such of our readers who are curious in these matters to the pages of our author, with their thoroughly French illustrations of unmistakably French men and women at work.

THE PADDINGTON SCHOOLS.—A gentleman in Paddington has given 1,000*l.* towards the cost of completing the Paddington schools. There was a deficiency of 2,000*l.*, and even now a sum of 900*l.* is wanting. The donor has requested that his name may not be published.

THE RELIEF OF THE POOR.

Each week's experience of the present management of the metropolitan poor shows both cruelty and injustice, and the persistence of many of the boards of guardians in a decidedly wrong course. Fresh arrangements are needed for preventing the poor from suffering miserably, both from sanitary neglect and from actual starvation.

Scarcely a day passes but we read of deaths which result from the want of food; and what meets the eye in the public prints gives but a feeble idea of the suffering which really exists. None know this better than the metropolitan magistrates, to whom the poor are driven in their extremity for that aid which should be afforded by the parish authorities. We believe that if the votes of the police magistrates throughout the metropolitan districts were taken, they would be unanimous in opinion as to the necessity for change. Let any one who is doubtful as to the truth of this take up at random a batch of newspapers, of recent date, and he will be convinced by such accounts as the following:—At Worship-street Police Court, the applications of the poor from Whitechapel, Spitalfields, Bethnal-green, and other surrounding parts, are very numerous. Here, Mr. Cooke complains that the Board of Guardians will take a whole family into the workhouse, but refuses any other relief. Now, this, the magistrate rightly thinks, is false economy; for many persons require only temporary relief, especially in inclement weather, which drives large numbers out of employment. Mr. Cooke thinks, that if the attention of guardians were properly directed to the circumstance, a little out-door relief would often enable the distressed to bridge over temporary difficulties, and that they would see that it is better to afford a little assistance than to saddle the rate-payers with permanent paupers. The magistrate said, that cases had come before him where the poor people, either from age or physical infirmities, were not in a condition to be sent to the stone or labour yard: if they were sent there they were not able to obtain enough by their labour to support themselves; "and when they tell me that they can only earn a few pence a day, which is obviously the case, that is not enough to meet their evident necessities. One old man had been sent to pick oakum; but at this, owing to the soreness of his hands, and from not being accustomed to the work, he was unable to earn 3d. a day. Prisoners in the gaols are put to pick oakum, as a severe punishment; but they are decently lodged, fed, and clad. It is surely not right that a poor old man, who has, so far as we know, no taint on his character except poverty and misfortune, should be put to degrading employment, and treated in a worse manner than criminals." Women and children had applied at the workhouses for relief, but had, in consequence of refusal, been obliged to make application for help from the magistrate.

It is not from the East-end alone that we have complaints. At the Marlborough-street Police Station, a man who had applied at the St. Martin's workhouse, with his two children, on a day of pelting rain, was brought before Mr. Tyrwhitt, the magistrate, charged with being drunk and disorderly. In the course of the case, the porter replied, in answer to the magistrate, that the casual ward only held sixteen. Mr. Trywhitt then said, "This is a disgrace to the parish, to limit it to such a number. We are, after all, the only persons who can stand up for the poor; and although I do not speak for popularity, I think it time to speak. With regard to the man, they were right in keeping him out, but not the children; and it was a disgraceful thing to keep them out, especially in such weather. The great parish of St. Martin refuses to admit poor children in the night-time, and only has a ward to hold sixteen poor persons. It is disgraceful. I have had to do with the St. Martin's people before, and know their practices. I shall discharge the prisoner."

An inquest was held in the Board-room of St. George the Martyr's, Southwark, on the body of Hugh Irvine, aged forty, who had died from want of food in a lodging-house in Mint-street, having in vain applied for relief at the workhouse. The relieving officer denied that the application had been made, as the name did not appear in the book. We are inclined, however, to credit the dead man's tale, for we know that in many workhouses it is the practice for the porter to prevent, as much as possible, access to the relieving officer to those who are not acquainted with the manner of proceeding. The jury found according to the medical evidence, that death had resulted from want accelerated by previous illness.

At the Middlesex Sessions a man was convicted of stealing some property from the St. Pancras workhouse. It was stated that he was an able-bodied pauper, and had been troublesome. The Assistant Judge remarked that the evidence showed the man had been discharged with a pound of bread, and was then left to starve in the street. In a destitute state he seems to have been again admitted into the workhouse, when the act for which he had been committed was done.

With another recent case in Bethnal-green we must close this list of the grievances of the poor; not, however, from any lack of materials, for we might fill pages with as bad or worse instances. In one family, in very poor circumstances, the wife fell sick of an illness which required the greatest care and the best nourishment: the remainder of the family, with difficulty and by constant application, could earn a bare existence: they were unable to properly nurse or maintain the woman, and wished her to be taken into the infirmary of the workhouse for a time. This was refused, unless the others would also go into the house.

Thousands of instances of this kind are happening yearly in the metropolis, and the poor are in fear of applying, in their greatest distress, to the relieving officers. It is, however, not so much the fault of these officers: it is the system which requires immediate change. Let us hope it will be made.

THE SHAKSPEARE MEMORIAL.

The General Committee will meet at the Society of Arts, on Monday afternoon next, to receive reports from the site and monument committee, and from the entertainment committee. We have reason to believe that the site we pointed out for the proposed monument some time ago, a portion of the Green Park fronting on Piccadilly, is most in favour. A public meeting will be held on the 17th inst., and the country will be appealed to for subscriptions. A good deal of ungenerous nonsense has been printed in some of our contemporaries, for which the writers of it, we are disposed to believe, will feel sorry hereafter. Of this, at any rate, they may be assured; there are men working on the committee who have but one desire in the matter, and that is, to see raised in a prominent position a noble memorial of our great poet, which shall tend at the same time to the adornment of the metropolis. That this will be done, and done satisfactorily, within a reasonable period of time, we have not the slightest doubt.

THE SCOTTISH NATIONAL MEMORIAL OF THE PRINCE CONSORT.

ARCHITECTURAL INSTITUTE OF SCOTLAND.

At the last meeting, Mr. Miller, honorary secretary, read a paper, entitled "A National Memorial—What should it be?" After some preliminary remarks, Mr. Miller said;—The first principle which he thought suggested itself was, that a national monument must be placed in the metropolis. It was obvious that the placing of a monument anywhere else than within the environs of the capital city of the country, must be to restrict it to a local character, or to the commemoration of some striking fact connected with the particular locality, and that it cannot be the memorial of a nation's estimation of the whole man's public life. The mistake of not adverting to this principle was committed in the recent instance of the Stirling monument to Wallace. A second rule was, that it should be independent of other structures. It ought not to be made an accessory merely to another and distinct building, because that necessarily was to sink its individuality and lessen its importance. This was more especially true should it be made a necessary to something else,—say to some building with which one act of the deceased's life had been connected; for the effect of such a juxtaposition was to associate the monument with the idea of its being erected to commemorate this one act in his history. It was, consequently, to derogate from the tribute which was intended to be paid to his memory. If this view were correct, it would follow that the proposal to place the monument in connexion with the General Post Office w mistake, as implying that that for which S land felt indebted to the Prince Consort, o which she desired to erect a monument t memory, was the condescending act of perfo ing the ceremonial of laying the founda stone of that building, which would be tho simply to make the monument ridiculous. the same time he took the liberty of sugges that to erect, though not as a national monun a statue or bust of the late Prince in the ha some other conspicuous part of this impor and elegant building, which is now risin grace the city, would be most appropriate desirable. In the third place, a national m ment ought to proclaim itself. In selecti site for the purpose of commemorating a m great celebrity and high position, he thoug was right in laying it down as a rule, th give it most the character of national, it sh be raised to such a height, or placed upon a commanding situation, as would make it from a distance. In Edinburgh there are n rous unoccupied sites of an elevated descrip such, for example, as the ridge of George-st the centre of Charlotte-square, the Calton the ridge of the High-street; and it is t noted that, if there is anything in which w particularly wanting, it is in lofty spires, to and monuments. Fourth, it must be m mental, to the entire exclusion of utiliti considerations. He might state here, what not generally known, that the National Monu on the Calton-hill owed its failure to the a sion of utilitarian views. In order to secur concurrence of a small minority of subscri a clause was added to the Act of Parlia under which this monument was to be ere making it imperative that the structure sh comprehend a place for divine worship, wit option to construct cells for sepulture i vaults beneath; and this most unhappy re tion (so thoroughly at variance with the upon which people in general had subscr was the cause why a structure, begun with paralleled enthusiasm, under the auspices of a list of noblemen and gentlemen, and unde especial patronage of the throne, came to mination which raises the finger of ignor and scorn to that which, even in its impe state, is perhaps the grandest thing they in Scotland. Fifthly, a national monument be subject to all the other rules applicab monuments of all kinds, and in partic it ought not to be inappropriate to character, pursuits, and station of the to be commemorated. Mr. Miller, under head, showed that either the design triumphal arch, or an equestrian statue inappropriate for a memorial to the Prince Consort; the former being sui only for commemorating a victory great military commander, and the only appropriate to kings or military comm ers. Having made these general observa he trusted that he might be pardoned for m the suggestion which he knew pressed str upon the minds of many members of the tute, that the design for the Scottish P Consort Memorial should be the subje general and open competition. There had a vast variety of proposals made, at lea writing, as to what the nature of the monu should be, and where it should be placed the preparation of designs was at once st by the resolution adopted at a very early p to submit the matter to the Queen. This lution, he understood, resulted in her Ma appointing a committee to consider what w be done; and he believed that this comm would not be uninfluenced by any resoluti opinion to which the Architectural Institu Scotland should come to on the subject. H a letter in his hand from the Lord Provost was a member of that committee, in whic lordship expressed a desire to learn the co sion that might be arrived at by the pr meeting. He was anxious to know what w prevailing wish in Edinburgh with regard t site and style of the monument, and he felt the opinion of the Architectural Institute sure to be esteemed a very valuable one. Institute was, therefore, apparently expec express an opinion; and, seeing that bodies, scarcely so much interested, had do it was fitting it should. Mr. Miller, after u at some length that this was one of those in which they were most likely to obtain th suggestion both as to site and as to charac design, by inviting competition, open to a world, and bringing before the public its r

in an exhibition of design, and referring to the Scott monument as an enduring instance of the advantage which might be derived in such a case from competition, concluded by saying that the sum advertised as already subscribed on behalf of this memorial was somewhere about 13,000*l*. This, fortunately, was too large a sum to be spent simply upon a statue. Its amount obviously and happily pointed to an architectural structure; and they might reasonably conclude from the fact that so large a sum was subscribed in entire ignorance of how it was to be expended, that if a design of great excellence should be produced, it ought not to be set aside because the cost of it might be much greater than the sum in hand.

The question is to be discussed at the next meeting.

THE OFFICE OF CITY ARCHITECT.

AT a meeting of the Common Council on Tuesday last,

Mr. R. N. Philipps brought up a report upon the subject of the office vacant by the death of Mr. Bunning, the late City architect, which recommended that no appointment of City architect should be made, but that in lieu of it a gentleman should be appointed under the ancient title of clerk of the works and surveyor to the City, at a salary of 1,200*l*. per annum; all public buildings to be open to competition; and the report also recommended certain alterations in the salaries of the clerks to be appointed under this officer. Mr. Philipps, having gone at some length into the subject of the report, which likewise suggested that the Court should take steps to have some memorial in remembrance of the late Mr. Bunning, and as a testimonial of the valued services of that gentleman, concluded by moving that the report should be adopted.

Some discussion took place upon the motion; and

Mr. Rowe expressed his opinion that the title of City architect should be maintained, and that the proposed salary was not sufficient: he suggested that the amount should be 1,500*l*. instead of 1,200*l*. per annum. He moved an amendment, embodying both these alterations, to the report.

Alderman J. C. Lawrence said that he did not believe that any eminent man would be found to accept the office for less than 2,000*l*. per annum, and he proposed an amendment to that effect, which was seconded by Mr. G. J. Cockerell.

The proposition of Mr. Rowe was, however, eventually carried; and the report, thus amended, was then agreed to.

ACCIDENTS IN THEATRES.

THEATRICAL managers have been holding a consultation with the Lord Chamberlain on the subject of accidents to ballet girls or others by fire, and also on the means of exit from theatres during alarms from fire or other causes. The coroner of Middlesex had written to the Lord Chamberlain on the subject of accidents by fire, with reference to the late inquest on the Pavilion Theatre Columbine. The Lord Chamberlain endeavoured to impress upon the managers present the necessity of taking additional measures to insure safety, and pointed out that, in the event of another accident, a coroner's jury might make the manager responsible, and bring in a verdict of manslaughter against him. Several of those present stated that there were great difficulties in the way of further security. The lights were already guarded, but the girls were uncontrollable, and *would* get into danger, in spite of all orders to the contrary, as was the case with the Pavilion Columbine. Materials to make their dresses uninflammable had been given to them, but they would make no use of them, although it was generally their under-clothing which took fire, and managers had no control over that: instead of wearing crinoline, the girls put on no less than thirteen or fourteen gauze under-petticoats at a time. Moreover, in cases where the managers had themselves caused the materials for rendering the dresses uninflammable to be used, they had themselves found that the result was not satisfactory. There were also many dresses which would be spoiled by these materials. Ultimately, the Lord Chamberlain said it would be his duty to send them a circular on the subject of lights, and also as regarded exits, impressing upon them that the public would hold them responsible for future accidents. This he has since done.

Sir W. Fraser, M.P., has given notice, we observe, that he intends asking the Vice-Chamberlain of her Majesty's Household whether the Lord Chamberlain is prepared to grant licences to theatres in which adequate provision is not made for escape in case of fire. Other buildings should be looked to besides theatres.

PROPOSED MEMORIAL OF THE LATE WILLIAM MULREADY, R.A.

WE are glad to find that good progress is being made with the subscription for this purpose. The committee propose that a suitable memorial be erected over the grave of Mr. Mulready, at Kensal-green; that a bust of the deceased artist, at the cost of 130 guineas, shall be provided, and offered for the acceptance of the trustees of the National Gallery, or the National Portrait Gallery; and that the remainder of the subscriptions shall be invested for the purpose of founding an art prize, to be called "The Mulready Prize." The subscription already amounts to about 500*l*.

THE BALL FOR THE BUILDERS' BENEVOLENT INSTITUTION.

OUR readers will have seen that the annual ball in aid of the funds of this excellent charity will, under the immediate patronage of the Right Hon. the Lord Mayor, the Lady Mayoress, and the Sheriffs of London, take place on Thursday next, the 18th instant, at Willis's Rooms, St. James's, when we hope that the friends and supporters of the Institution will assemble in large numbers and support the honorary secretary, Mr. Joseph Bird, and the stewards, in their laudable endeavours to increase not only the comfort and enjoyment of those who attend, but, what is of equal importance, the funds of the charity.

We perceive also that an election of five pensioners, three males and two females, will be held in May next, which we take to be an indication of the progress of the Builders' Benevolent Institution,—a progress which ought to be even more rapid than it is.

COMPETITIONS.

Croydon Union Workhouse. — Designs were submitted to the guardians, in competition, by five architects. From these, in a very short time, the guardians selected one which is pronounced in a printed paper issued by one of the competitors, "an imperfectly developed design, which is not only not in accordance with their own resolutions, but which is also inconsistent with itself, and is likewise *untruly* represented by the drawings." The writer calls upon the guardians to refer all the designs to the judgment of some experienced architect of eminence.

Wantage Corn Exchange. — A considerable number of designs have been received, and are to be examined on this, Saturday.

Church at Carlisle.—Forty-one sets of designs have been sent in for the proposed Church of St. John the Evangelist, London-road. The main conditions imposed upon the competitors were, that the church should seat 1,000 worshippers, and that the cost should not exceed 3,000*l*. It was also stated, we believe, that architecture of the Early English style would be preferred. Few of the designs exhibited are in the style proposed. The decision is as follows:—1st. Mr. R. Clarke, Nottingham (motto "Trefoil"), to whom will be entrusted the carrying out of the work; 2nd. Mr. D. Birkett, Carlisle (motto, "*Pro virtute*"), who gains the 10*l*. premium; 3rd. Mr. T. K. Green, Cannon-street, London, who will receive the 5*l*. premium.

Congleton Town Hall.—The town council have decided on calling in an architect, to assist them in the selection of the best design.

THE NEW INFIRMARY, LEEDS.

WHEN it was determined to erect a new Infirmary, in Leeds, the committee resolved that it should, as far as might be, embody all the more recent improvements; especially that it should be planned on the pavilion system; and they premised by requesting their architect, in company with Dr. Chadwick, the chief physician to the infirmary, to make a careful inspection of the hospitals of Paris, Brussels, Bruges, &c.

The site for the infirmary presented some difficulties as to the introduction of the system in its normal form, being of a very long and narrow shape, and rising rapidly from front to back, the direction of its length; while the front or lower end was almost of necessity the position for the entrance, though it was rendered equally necessary, by the great slope of the ground, that the principal and lower floor of the hospital wards should be on a level nearly 20 feet above that of the entrance.

This difficulty has been met by the following arrangement. The central court, from which the pavilions diverge, is placed in the middle, and from it the pavilions extend towards the front and back, and on the level of the latter. The entrance is in the centre of the southern end, which is the principal front, and is, consequently, under what would naturally be the centre pavilion, but which is, for various reasons, omitted. From the entrance-hall a corridor runs back nearly as far as the central court, where it reaches the main staircase, by which the corridor or cloister of that court is reached. This surrounding corridor is repeated, however, on the entrance story, and from it are hydraulic lifts for patients to each pavilion. By this arrangement there is obtained a second ground story below the ground story of the hospital itself, which is devoted to the various departments of management and administration.

In this extra story are placed the entire out-patient departments, which are very extensive; the dispensary; the temporary receiving wards for accidents; the committee and secretary's rooms; the rooms for students, whether resident or otherwise, for the house surgeon, the matron, &c.; the cooking department, the stores, the dead-house, *post-mortem* room, &c.

Arriving by the great staircase on the principal hospital floor, we find the arrangements to assume a more normal aspect. We have the usual central court, with its surrounding corridor and its diverging pavilions, three behind and two in front. The court has a gateway entrance to the west from a side street,—the chapel to the east; and, in place of a central pavilion on the south, are the great staircase and the operating theatre.

The pavilions are, in arrangement, nearly like those at the Lariboisière hospital, excepting in that of their farther ends, which differs from that of any existing hospital. In this arrangement the object has been to unite three great desiderata:—

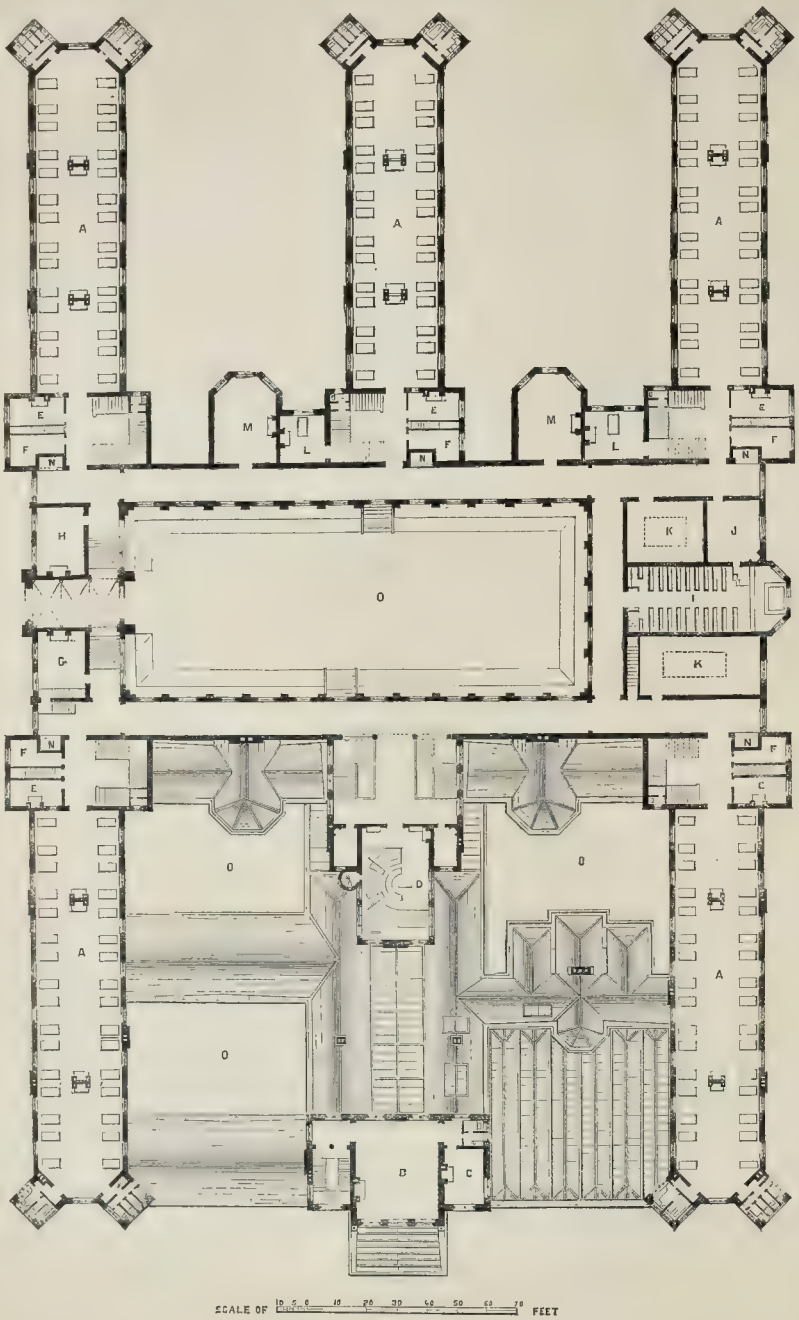
1. The obtaining of a large end window, so essential to the cheerfulness of a ward.

2. The providing of the water-closets, urinals, baths, &c., without encumbering the arrangement inconveniently.

3. The giving *thorough* ventilation to these adjuncts.

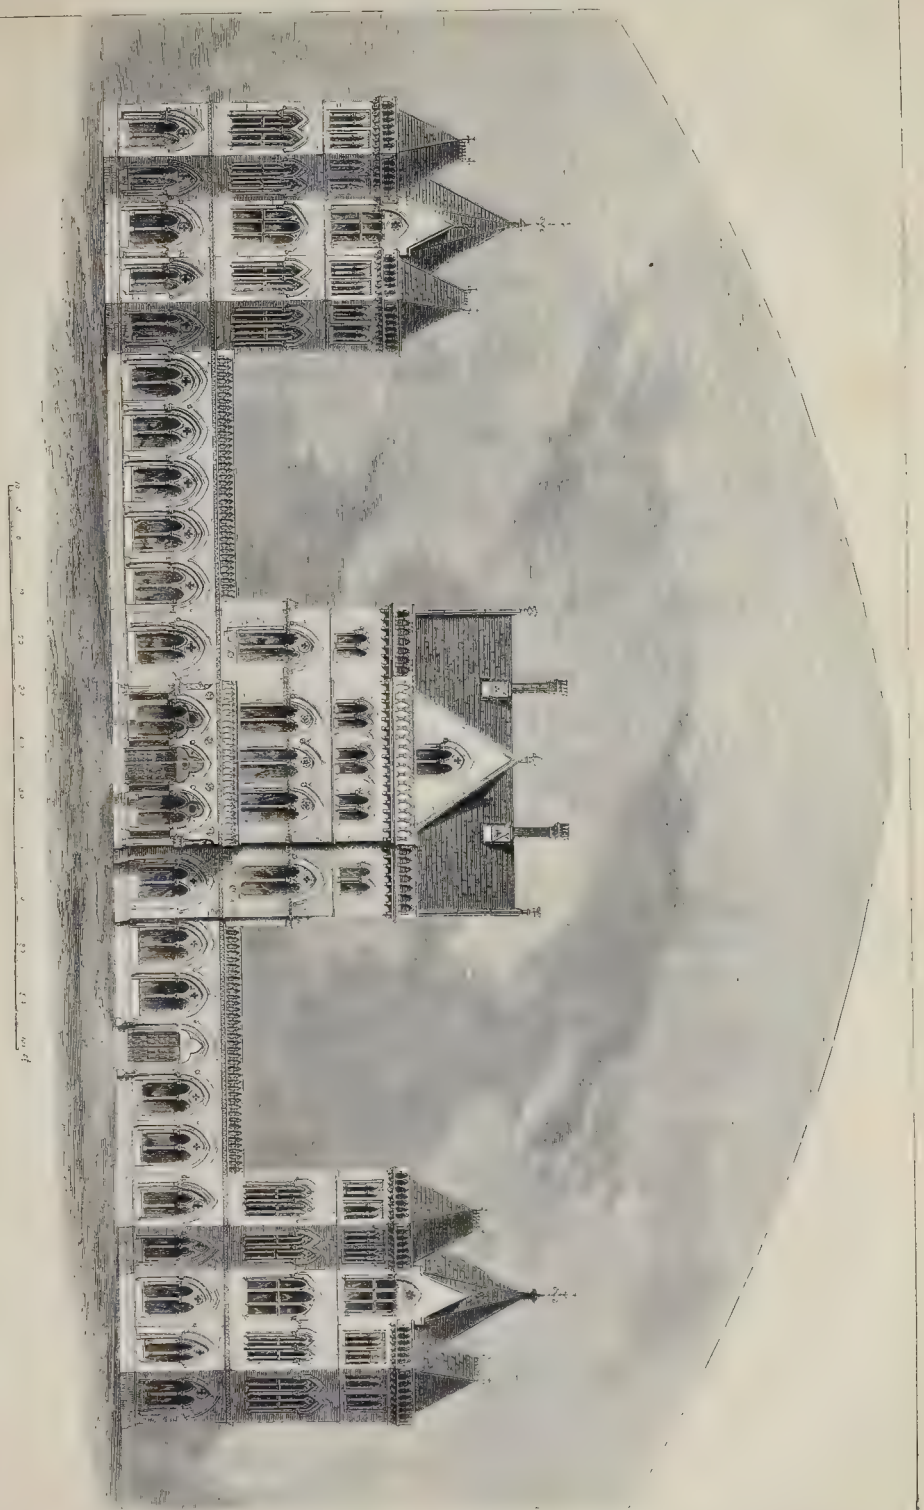
These objects have been effected by means of projections in a diagonal position from the angles of the ends of the wards, which angles are canted so as to approach, in outline, to a portion of an octagon.

The proportions and general scheme of the wards may be at once seen by reference to our illustrations, which are, for the sake of clearness and utility, given as much as possible in a geometrical form, and to a uniform scale. The section (transverse) through one ward will, when we give it hereafter, with its relative elevation, supply the essential information; while to these will be added, to a larger scale, diagrams explaining the system of ventilation, which is by flues in connexion with stove-flues, and by means of air trunks communicating with the circles in the heads of the two-light windows, as well as by the perforations, for admitting the external air, which are introduced at the levels of the floors themselves.



These wards are to have double open stoves in the centre, as seen on the plan, and their smoke will be carried off by descending flues. The walls and ceilings will be finished in either Keene's or Parian cement, and the floors are to be of oak. The staircases throughout the building are spacious, and constructed of stone.

The material for the walling is pressed brick, stone being used for dressings, &c., only where indispensable. Mr. G. G. Scott, R.A., is the architect.



The first stone will be laid in March next.

LEEDS NEW INFIRMARY.—*Plan of One Pair.*

NEW INFIRMARY, LEEDS. SOUTH ELEVATION.—MR. G. GILBERT SCOTT, R.A., ARCHITECT.

THE ARCHITECTURAL ASSOCIATION.

THE ordinary meeting of members was held on Friday evening, the 5th inst., at the House in Conduit-street.

The chair was taken by the president, Mr. T. Roger Smith.

Some discussion ensued with reference to the advisability of the Association presenting a petition to Parliament in favour of some general and comprehensive plan of railway communication in the metropolis by which the growing wants of the public might be supplied without the disfigurement of the principal thoroughfares.

Mr. Paraire suggested that a petition similar in terms to that already adopted by the Royal Institute of British Architects should be presented to Parliament as soon as possible, in order that the Select Committee of Lords and Commons, to whom the subject of railway communication in the metroplis was about to be referred, might be put in possession of the views of the profession on this important subject.

A petition, as suggested, was unanimously agreed to.

The Secretary called attention to the particulars of the competition for Mr. Tite's prize, offered for the best design for a metropolitan police-court. The following accommodation was to be provided:—A court-room, about 33 feet by 23 feet; magistrates' private room, 12 feet by 10 feet; clerk's office, 16 by 16 feet; office for summoning officer, 16 feet by 13 feet; gaoler's room, 10 feet by 12 feet; usher's room, 10 feet by 12 feet; public waiting-room, 16 feet by 20 feet; prisoners' waiting-room, 16 feet by 18 feet; about four rooms for an office-keeper, four water-closets, and six cells. The accommodation, except that provided for the office-keeper, should be on the ground-floor. The entrance for the magistrates to be apart from that of the public. The magistrate's private-room and closet to be adjoining the end of the court that he will occupy. The prisoners and police should have a separate entrance from that used by the public, and should be in connexion with the prisoners' waiting-room and cells. The required drawings to be two sections, one elevation, two plans, one bird's-eye view, and one sheet of details, if the building be inclosed; or one section, two elevations, two plans, one perspective view, and one sheet of details, if the building be open all round. The general drawings are to be drawn to a scale of one-eighth to a foot, and the perspective view is to be on paper of imperial size.

Mr. J. A. Bunker then read a paper on the "System of Measurement as adopted in the Metropolis."

At the conclusion,

Mr. Paraire observed that although he agreed with Mr. Bunker generally in his description of the well-known system of measure and value as practised in the metropolis, he could not quite agree with him as to what were commonly termed "sporting items." Such items were extremely dangerous unless properly described in a specification. As an illustration, he might mention that in a case at Islington which came within his own knowledge, tenders were invited for raising to the extent of 2 feet 300 feet of brickwork surmounted by a stone kerb, into which a railing was fixed (leaded) in the ordinary manner. The tenders varied in amount from 250*l.* to 76*l.*, and he believed that the builder who took it at the latter price got more out of it than the person would have done who asked 250*l.* The manner in which he did it was to raise the kerb and iron railings in 12-feet lengths, and then introduce his courses of brickwork. By this means he was saved the expense of taking up and resetting the kerb and refixing the rails. With regard to the standard measure, he believed it would be very important if a recognized standard could be established for general use. There was one some years ago at Somerset House, but he was informed that it had disappeared long since. This was a subject which the Architectural Alliance would do well to take up, because if there was a uniform standard adopted all work could be done by the cube up to a certain thickness, and all above it by superficial measure. With regard to decorations, he was not of opinion that they could be satisfactorily measured.

Mr. G. B. New agreed that if there was one uniform method of measuring stone work, there would no longer be the many disagreements which now prevailed on the subject.

Mr. Bunker said that Mr. Paraire had misunderstood him as regards decorations. The only decorations which he referred to as measurable were plain gold lines, or lines of colour with a little scrollwork.

Mr. New expressed himself favourable to the introduction of a system of measurement by decimals.

Mr. Rickman was of opinion that the decimal system would not help them much. For his own part, he preferred the duodecimal system, which would get rid of a vast number of unnecessary fractions. He had no hope, however, of seeing it carried. The London system of measuring was gaining ground throughout the country, and it was now very much adopted in Birmingham, where it was comparatively unknown some years since. There were, no doubt, good reasons for the diversity in the system of measurement which prevailed in various portions of the empire. In London, all materials used in building had more or less labour expended on them before they came into use; but in the country, the chief materials, such as stone, bricks, lime, sand, &c., were at hand; and in Ireland and Scotland, stone was usually found on the site of all new buildings. It was consequently not desirable in such cases to adopt the same principle of measuring as that in vogue in London. In the neighbourhood of Dublin, for instance, the royalty paid for quarrying stone was so small that the cost of the article was nearly nominal. In the neighbourhood of Bristol, and many places on the south-west coast of England, the standard thickness was 18 inches. In the Isle of Man, the practice was to take the girth all round the house, giving in addition the reveals and openings, by the thickness of the walls.

Mr. Paraire said, that the conclusion to be drawn from the observations of Mr. Rickman was, that measuring stonework was a geographical difficulty. He approved of the decimal system, the value of which was proved by the fact that it was invariably adopted by all Continental states.

Mr. Matthews observed, that as there were, no doubt, good local reasons for different measurements: if a fixed system were laid down, country builders would not agree to it, because they would fancy that it would operate disadvantageously for them.

The Chairman said that the introduction of a decimal system would be a great improvement on the ordinary system of vulgar fractions; but he feared that the duodecimal system could never be adopted. The object of measurement was either for the purpose of making out an estimate or a bill, and the London system went into minute details; while the practice in vogue in the country was based on a broader principle, and the estimate was made, so to speak, more in groups. He believed that many architects were of opinion that the London system was too refined. It was, however, just possible that a good deal of uniformity might be arrived at if London measurers would adopt in some instances country practices, and country measurers conform in some degree to the metropolitan system.

Mr. Bunker said, that although, in measuring, a great number of small items were named, they were not moneyed out. The object of referring to them so much in detail was, that the builder might be able to know precisely what he was expected to do or what to supply.

Thanks to the reader of the paper having been voted,—

It was announced that the next subject for the Class of Design would be, "Offices on an Acute Angle of Street, 40 feet by 20 feet frontage;" and that on the 12th inst., Mr. E. J. Tarver would read a paper "On Figure Drawing."

MR. RUSKIN AT THE WORKING MEN'S COLLEGE, LONDON.

MR. RUSKIN said it was always very pleasant to him to come and find himself surrounded by such sympathetic faces as his old friends in the college presented to him, and explained his long absence by saying how unwell he had been, and how necessary it had been to him to live where the sky could be seen without the intervening smoke which always hid its beauty from Londoners' eyes. He had been hard at work too, perhaps too hard for his strength, and he had had many discouragements. He had used the best part of his life in the endeavour to make one English painter understood, and he feared his success had been but small. To this day Turner was a mystery to his countrymen, and his paintings were something worse than a mystery—they were a trouble and a bore. Nobody appeared to know what to do with them. They were first put into Marlborough House, then into the galleries at Kensington, and now they are put all together into a room at the National Gallery, where not one of them could be seen. The drawings had fared even worse. He had begged of the trustees of the National Gallery, and almost gone down on his knees before them, that he might be permitted to put them into such frames as would admit of their being seen. This having been done, no further steps had been taken in the matter. Neither the trustees nor the nation could find a place in which Turner's drawings could be exhibited, and they had become mildewed and damaged for want of proper care during the alterations at the National Gallery. Mr. Ruskin complained that pre-Raffaellitism, having established the principle that the dignity of a picture depended largely upon its subject, was now degenerating in that direction, and its professors showed signs of forgetting the true dignity which always lies in the conscientious performance of work as such. In architecture, though great things were being done in England—less, perhaps, in London than in other parts, owing to peculiar restrictions and conditions which might be unavoidable; and most notably in Manchester, where, besides the magnificent museum, were many noteworthy specimens of the Gothic style—the present generation of Englishmen would pass away before any true appreciation of the glories of Gothic architecture was arrived at. Another source of disappointment to the lecturer was the small success which had attended his efforts to cultivate a love of nature. He had been told he had been successful here, and what did he find? That the most lovely natural scenes in Europe—the Falls of Schaffhausen and the Lake of Geneva—were marred for ever. At the falls a railway bridge, as hideous as such things usually are, had been thrown across; the Mediæval castle which crowned its heights had been converted into an hotel; while lower down the falls, factories had been built, poisoning the air with coal smoke. So much for love of nature in that quarter. At the lake a railway embankment had probably for ever divorced the lovely green slopes from the blue waters, when it would have been just as easy to have carried the railway on the other side of the lake; but it might have involved a few minutes' more travelling, and in such a case poor nature must needs go to the wall.

Mr. Ruskin concluded with an expression of the faith he has in the value of the principle of association as opposed to competition, and the good that will result to true art from the progress of the former principle.

VICTORIA STREET, WESTMINSTER.

IT is satisfactory to observe, that this street, which has for many years presented so waste and desolate an aspect, is assuming an appearance of activity, and that building operations are being proceeded with. In addition to the extensive chambers in course of erection by the Mutual Tontine Association, of which an illustration appeared in our last volume, we perceive that the excavation has been commenced for large premises of an ornamental character, for Messrs. J. & J. Vickers & Co., the distillers, whose removal from the Borough has been rendered necessary by the formation of the Charing-cross railway. The architects engaged are Messrs. William J. Mayhew & Calder.

So far as these improvements have progressed we have reason to thank the Legislature for the change in the constitution of the Board of Commissioners. It may be hoped that, under the presidency of the chairman, Mr. Tite, M.P., supported by the exertions of zealous officers, this undertaking will yet realize the expectations of its promoters.

PROPOSED NEW ROAD FROM SOUTH KENSINGTON TO BELGRAVIA.

AMONGST the numerous schemes, plans of which have been deposited for the ensuing session of Parliament for consideration, we have noticed one that is likely, if carried out, to improve and influence the architectural character of the west end of London. It is a design for a new road, or rather boulevard, to connect the district of Belgravia and the Cromwell-road and South Kensington districts. It is by no means a new idea, as, if we mistake not, it was approved of some years ago by the late lamented Prince Consort, who saw the expediency of a direct communication between the abovenamed districts. It is proposed to form a boulevard, upwards of 130 feet wide and more than half a mile long, commencing at the east end at Pont-street, Belgrave-square, by a handsome approach through an archway, and thence in a straight line to a point facing the Kensington Museum in the Cromwell-road. The road is to be lined with handsome attached and detached mansions on each side. It will be an immense improve-

ment to the whole of the surrounding district, and must command very general assent.

The scheme has our cordial approval, and we shall be glad to find the promoters enabled by Parliament to carry out the undertaking.

THE LEVERAGE OF TOOLS.

In answer to the question as to the power obtained from the increased length of screw-drivers and similar instruments, I think that the principle rests on that of the wheel and axle, and depends upon the amount of lateral motion obtainable from the instrument.

The relation sought to be obtained is that existing between the diameters of two circles, both described about the axis produced of the screw or hole, and the radii of which are the distance of the centre of force from this line, and half the distance between the extreme biting points of the blade of the instrument.

Thus, in a driver, let the width of the blade $=2b$, and the length of the handle $=c$; then if the radius of the circle described by the force $=x$, the relation desired will be $\frac{b}{x}$. Let the angle formed by the axis of the driver with the axis of the screw $=a$; then $x=c$ Sin. a, and the above relation will become $\frac{b}{c \text{ Sin. } a}$. If in this equation $a=90°$, the result becomes $\frac{b}{c}$, which is a case of the ordinary lever.

From the above, it is evident that in the case of any instrument which has no power of lateral deviation, an increase of length will make no corresponding increase in the amount of power developed,—a result apparent from a simple inspection of the proposition. A. J. C.

ACOUSTIC(?) POTTERY.

This subject being still under discussion in your journal, I venture to draw your attention to a position other than any heretofore noticed in your pages—of earthenware jars or pipes built into a church.

In St. Mark's Cathedral at Venice I saw from a gallery used as a passage to the top of the vestibule, that a considerable portion of the mosaics at the west end of the nave was removed, showing the brick barrel vaulting quite bare, in which, at intervals (whether regular or irregular I cannot say), were built earthenware pipes, radiating with the voussoirs, about 4 inches in diameter, and projecting apparently about 2 inches. Are these "acoustic pottery?" or are they intended to carry off any dampness in the cement in which the mosaics are embedded? or are they for the purpose of more easily threading the vaulting for the lamp chains?

I was in St. Mark's about a month before this subject was last mooted in your journal, or I should have been more particular in my observations, especially as the church is remarkably resonant. C. Noel Armfield.

THE PICTURES "DISCOVERED" IN GLOUCESTER.

Sir, My attention has been directed to an article in the *Gloucester Chronicle*, giving a different account of the "discovery" of two pictures in the mansion now occupied by the School of Art there to that which I had detailed to you.*

All I can say is, that I distinctly understood, when I purchased these pictures, that they were found in the recesses walled up as I described; but it appears, on further inquiry, that they were panelled into walls, and removed by the person from whom I bought them, and to whom they have been since returned. The version of the *discovery* in the *Gloucester Chronicle*, allowing it to be accurate, certainly destroys the romantic incident of walled-up recesses or chambers, but the important questions are untouched, and would be equally interesting whether the pictures were panelled into walls or found in recesses walled up, viz.—Is the portrait an original portrait of Pope? Is the larger picture a work of art, and by Guido? I have no longer any personal interest in these questions, but the portrait has a strong likeness to Pope, with certain differences from the more known portraits of him; and it appears to be an original picture of the time. As to the alleged "Guido," we all know how seldom it is that connoisseurs, however eminent, can agree as to the authority of a work by an Italian master, unless the pedigree be unquestionably established; but so far as I can pretend to judge, I should say that the picture, though boldly and vigorously, is not coarsely painted, as the writer in the *Gloucester Chronicle* considers it to be; and that the head of the male figure has not been painted in, as the same writer intimates, but is original. These are, however, matters in which any persons who may desire to become the possessors of the pictures in question will probably rely upon the opinions of authorities in whom they are accustomed to confide. Thomas Baylis.

Thames Bank, Fulham.

* See p. 32, *ante*.

TO DESTROY VERMIN.

Sir,—In answer to your invitation to give the results of experiments on the destruction of insects, I may tell you that after trying nearly if not all the advertised nostrums in town or country, for twenty years, I have found nothing equal to the "Magic Paste" of C. Penney, 4, Roseberry Cottages, Dalston, for the almost immediate riddance of cockroaches, ants, and the lepisma, but it did not always prove effectual against crickets. These will very quickly disappear under a simple remedy,—Calomel and powdered white sugar, in equal quantities, well mixed, and strewn about the hearth or places frequented. I am told this is equally effectual against all the pests above enumerated, but I had only crickets left when I tried it. Samuel Woods.

*** Care should be taken to prevent domestic animals from tasting the pastes and powders used for killing insects. Those of the pyrethrum class are said to be harmless in this respect.

ARCHITECTS' ACTIONS.

KETLING *v.* THE BRIGHTON CLUB AND NORFOLK HOTEL COMPANY.

This was an action brought (in the Court of Common Pleas, Westminster) by the plaintiff, an architect, to recover for his professional services in making plans and specifications for the erection of a new hotel and club, on the site of the Norfolk Hotel, at Brighton. The plaintiff also alleged that he had been appointed architect by the provisional committee of the company, and he claimed compensation for having been wrongfully dismissed. He had made plans and elevations for the proposed new hotel, which had been laid before the company and the shareholders, but not carried out. The proposed new hotel was to cost 26,000*l.*, and he claimed 5 per cent. on this sum, or 1,300*l.*, for his plans and sections. The company, when established, had purchased the old Norfolk Hotel and the land for 22,000*l.*, and still carried it on, contemplating only some future additions to the building; and the directors denied that they had appointed the plaintiff their architect, or that they had any immediate need for one at all. They also denied that they had given the plaintiff authority to make the plans and sections, which he had done to show the shareholders, and asserted that the plaintiff had set about them at the suggestion of some of his friends, promoters of the company, and had accepted a bill of exchange for 500*l.*, in consideration of those promoters appointing him the architect of the company, to build a new hotel on the site of the old one before the company was established, but the directors altogether repudiated these proceedings. As, however, they had accepted and used his plans, they paid 150*l.* into court as sufficient remuneration for them. The plaintiff's witnesses estimated them as worth 1 or 1½ per cent. of the estimated outlay, or from 250*l.* to 350*l.* The case occupied the day.

Mr. Serjeant Parry and Mr. Waddy appeared for the plaintiff; Mr. Karslake, Q.C., Mr. Henry James, and Mr. Staveley Hill for the defendants.

The jury found a verdict for the plaintiff for 300*l.*

PROVINCIAL NEWS.

Brighton.—To the town council recently, the general purposes committee reported in favour of establishing public baths in Brighton as "a great public benefit" and as "promoting the health and comfort of the inhabitants, and especially of the labouring classes." A plan was appended by the surveyor, for the conversion of the dome of the Pavilion stables into baths, and providing for an entrance thereto from Church-street. The consent of the inhabitants in vestry being necessary under the Act, the committee recommended that it be obtained, and they add that "the gentleman who made the offer of 1,000*l.* towards the expense of constructing baths has communicated to the committee, through Mr. Alderman Burrows, his desire that the baths should be constructed under the dome of the Pavilion, instead of under the King's-road." Wash-houses are not recommended at present.

Tavistock.—A public hall has been opened at Tavistock. The hall stands immediately to the north of the Abbey. It is built of local free stone, contrasting with Fremin Tor granite dressings and mullions. The hall proper occupies the upper story of the building. It is calculated to seat eight hundred persons, and would afford standing room for upwards of a thousand. Five windows on either side—the centre one in front a bay—give light during the day; and at night the hall is illuminated by upwards of 120 jets of gas, proceeding from eight bronze coronæ, pendant from the roof, and manufactured by Messrs. Hart & Son, Mediæval metal workers. The roof itself is open-timbered, and the ceiling, when finished, will have about it a considerable amount of fret-work. Machinery will be provided for hoisting the seats out of the way whenever occasion requires. The walls, to the height of 6 feet from the floor, are panelled in stained deal. At the north end of the hall is an apsidal-formed recess, lined with the same material, and which will serve either for an orchestra or a platform for the purpose of meetings: the front is moveable. Facing this, at the other end of the room, but high up in the wall, is a projecting wooden gallery, also of stained deal, which will accommodate about thirty. The design was furnished by Mr. Edward Rundle, of Tavistock, architect to the Duke of Bedford, under whose directions it has been erected by the duke's workmen. One of the chief uses of the hall is for the local Mechanics' Institute.

Sheffield.—A meeting of the Cutlers' Company has been held to receive the report of a committee with reference to plans for the alteration of the Cutlers' Hall, and to finally adopt one or other of the plans. Promises of subscriptions to the amount of 3,050*l.* having been obtained, the general committee had issued applications to the local architects for designs for the proposed alterations, stipulating that the area of the banqueting hall, as enlarged, be 5,000 feet, and the ladies' gallery 1,000 feet. Six designs were sent in, and the Building Committee unanimously agreed to recommend the company to adopt the designs of Messrs. Flockton & Abbott, and to award 20*l.* to Mr. M. E. Hadfield. The meeting of the company unanimously approved the recommendations of the Building Committee, and the designs of Messrs. Flockton & Abbott are, therefore, finally adopted. They also re-appointed the committee, with power to carry out the proposed alterations. The subscription was announced to have reached 3,725*l.* It is understood that, though tenders will probably be at once invited, the alterations will not be commenced until the full sum required, about 5,000*l.*, has been raised. The Building Committee did not, at the time they invited designs, contemplate any enlargement of the front of the building at present, and Messrs. Flockton & Abbott's principal design embraces the partial enlargement only; but they have added a supplemental plan, showing how the front extension can be carried out in conformity with the other, whenever the funds are forthcoming. The present size of the banqueting hall is 72 feet by 29 feet, and it will be increased to 100 feet by 50 feet, by extending it 21 feet to the right, and pushing the far end 28 feet further out. The height of the room will be 45 feet. At the front end of the hall will be a gallery, 12 feet deep, extending the entire width of the hall. At the other end will be another gallery, 13 feet deep and two-thirds the width of the room. The larger gallery will be for lady spectators, the smaller one for an orchestra. The style of architecture will be Corinthian, with a sub-base 9 feet high, three-quarter columns rising at intervals in pairs, from bases projecting 20 inches, the columns supporting a massive entablature. The room will be lighted by circular windows over the entablature, and by slightly curved roof lights.

CHURCH-BUILDING NEWS.

Stamford.—The new church and presbytery at Stamford are drawing near completion. The style of work adopted is French Gothic, from designs by Mr. G. Goldie, of London, architect; Mr. T. Lait officiating as clerk of works. The plan consists of nave and north aisle, with chancel, lady chapel, and sacristy. The church inside is 80 feet long by 26 feet wide. The aisle is 33 feet long by 11 feet wide. It is approached by two large arches, with moulded bases, in Casterton stone, and red polished granite shafts. The lady chapel is entered by three arches, supported by polished Aberdeen granite shafts, with moulded bases and capitals. On the north side of the chancel is the presbytery, with sacristy, hall, dining-room, parlours, kitchen, and scullery, on the first-floor, with sitting-room and three bed-rooms on the upper floor. The whole of the interior of the woodwork exposed to view is stained and varnished, the roofs being all boarded on the back of the rafters, and open to the ridge. The entrance is on the north side, through an open porch. The

porch, chancel, and lady chapel, are paved with Maw's tiles. The whole of the buildings are covered with blue Bangor slates, with ornamental red ridge tiles. The dressings are all in Casterton stone, with rubble limestone rock-faced walling, laid in courses varying from 2 to 6 inches thick. The nave of the church is lighted by a four-light tracery window, at the west end, and on the south side by four lancet windows. On the north side is the aisle, which is gabled with a two-light tracery window in each gable. Nearer the chancel, on the north side, are two lancet windows, which add much to the light of the nave. The lady chapel is lighted by a tracery window in its west end. The chancel has a tracery window on the north side of its apse. The principal front being west, is arcaded on each side of the four-light window with buttresses of two stages, which are finialled. A bell tower has been built to the height of the eaves of the church, but, through funds being not forthcoming, is temporally covered over. Its omission gives for the present an unfinished appearance to the front of the building. The contractors for the whole of the works are Messrs. Halliday & Cave, of Greetham, Oakham; Mr. George Walters being foreman of the works.

Uxbridge. — We extract the following from a circular lately issued by Mr. H. Bird, the honorary secretary to the committee for building St. Andrew's Church, Uxbridge:—"The subscriptions towards the general fund are about 2,730*l.*, besides 150*l.* from the Diocesan Church Building Society, and a similar grant is expected from the Incorporated Church Building Society. To these sums which, roughly speaking, amount to 3,000*l.*, there has been added a noble gift of 2,000*l.* from Miss Ede, part of which is at her wish to be applied to the chancel, and the remainder (which it is to be hoped will be about 1,100*l.*), is to be at the disposal of the committee for general purposes. It will thus be seen that the contributions already promised amount to about 5,000*l.* On the other hand, the expenses of the undertaking are estimated as follows:—The erecting of the entire church (excepting tower and spire), 4,500*l.*; the site, 450*l.*; architect's fees, fencing, consecration, law expenses, and sundries, 410*l.*; making altogether, 5,360*l.* The church has been designed by Mr. George Gilbert Scott, R.A., in the Early English style, to contain 700 sittings, of which one-half are to be reserved for the poorer inhabitants of the district. It is proposed to build it in brick, without any unnecessary ornament, but still in handsome proportions suitable to its position at the entrance of Uxbridge. The drawings are nearly completed, and the preliminary works are proceeding without delay."

East Peckham.—The parish church has been re-opened. In 1857 the owners of the chancel and adjoining mortuary chapel set an example of restoring those portions of the building, when the four arches were entirely rebuilt, the floors paved with Minton's tiles, and two painted windows inserted,—one by O'Connor, to the memory of the late Mr. William Cook, jun., and one by Warrington, to the memory of the late Mr. Hugh Boorman. Since then nine of the most decayed of the old windows have been reinstated. In the early part of last year the present works were taken in hand. They consist of raising the floor by one step, and concreting the surface; underpinning a portion of the walls, and re-plastering them all; re-seating the whole of the nave and south aisle, which has been done in oak; erecting a new pulpit and prayer-desk, and an oak screen in the tower arch; re-paving the aisles, porch, and tower; essentially repairing the roof, and introducing an apparatus for warming by hot water; besides which there has been the addition of a large west window, which was much needed, and which had once before existed, but the space had been bricked up after the window had fallen into decay. This window was principally the gift of a few friends. At this time also the stonework and glass of the east window has been renewed; and the chapel has been improved by its owner by the removal of a large pew, and the substitution for it of two stall seats; as also by the insertion of a painted window, by Messrs. Hardman. The work was done under the direction of Mr. J. Clarke, of London, the diocesan architect. The builders were Messrs. Bowley, of Westminster, and for the stonework Messrs. Sutton & Vaughan, of Maidstone.

Cheam.—The funds for the finished portion of the church here have been raised, so that the edifice thus far is paid for. The tower is now carried up to the height of 40 feet only. The chancel, of which the foundations at present only are laid, and the concrete put in, will make the whole length of the edifice more than 100 feet. The seats are open benches; the pulpit a low stone one, with carvings. The roof is open, and of varnished timber. A feature of the building is the low columns with their carvings, and the arches and walls formed with alternate courses of red and black brick. The architect is Mr. Pownal, of London. The contractors for the building of the finished portion were Messrs. Sharpington & Cole, Westminster-road. The cost has been somewhat above 3,000*l.* A tradesman of Sutton, Mr. W. Noble, took an under-contract for the brickwork, at a price, it is said, that left him poorer for the undertaking.

Cirencester.—Subscriptions for the restoration of the church, amounting to 7,548*l.*, have been received, but the cost will be 12,000*l.*

Bengeworth (*Worcestershire*). — Some months ago a committee for the restoration of the parish church was formed, who consulted Mr. Preedy, of London; and his report, after a survey, showed that the building was in a most dilapidated state, some portions being absolutely dangerous. It was proposed generally to restore the church, remove obstructions impeding both sound and light, remove the galleries, and extend the chancel eastward, whereby additional sittings would be gained. It was estimated, that to carry out the architect's proposal in a satisfactory manner, at least 2,174*l.* would be required, and about 1,800*l.* have already been raised; but as the committee have resolved not to incur liabilities without a probability of sufficient assets, no progress has yet been made in the restoration itself. Until lately there has been no parsonage-house held with the living. The present vicar has, out of private means, and by the aid of the Ecclesiastical Commissioners, recently erected a parsonage-house on the glebe; and this step, it is hoped, will stimulate exertions to place the church itself in a proper state for the due celebration of Divine service. The new vicarage is a building with steep roof and varied gables, and red and white brick have been introduced in the structure. Mr. Christian was the architect on behalf of the Ecclesiastical Commissioners; and Mr. Gardner, builder, of Bengeworth, carried out the design.

Pontefract.—All Saints' Church, having been closed for several months, has been reopened. A set of six bells have been added, at a cost of 328*l.* The stalls in the church have been made more comfortable, and the floor boarded. The font, which has hitherto been placed in rather an obscure place, stands now in front of the communion table. The picturesque ruins of the church, which were getting into a very dilapidated condition, have been secured as far as practicable. A new heating apparatus has been supplied, and the organ has been enlarged and improved by Mr. Harrison, of Rochdale.

Darlington.—The new Duke of Cleveland has expressed his readiness to contribute 500*l.* towards the sum wanting to complete the restoration of St. Cuthbert's Church, Darlington, provided 1,000*l.* be raised by other contributors. The late duke was also a donor to the restoration fund.

DISSENTING CHURCH-BUILDING NEWS.

Newcastle-upon-Tyne. — The members of the United Methodist Free Churches in Newcastle-upon-Tyne have reared several chapels in the most populous parts of the town, the latest having been recently opened in Gloucester-street, Scotswood-road. This is the fourth within the last five years. It is in the Italian style, the details in brick and stone dressings. The building is a parallelogram in form, the main entrance being through a doorway beneath a three-light window, which forms the principal architectural feature of the elevation, and fronts towards Gloucester-street. A polished stone porch forms the entrance into a corridor, with stairs at each end leading to galleries constructed on three sides of the edifice. The chapel is 56 feet in length, 42 feet in width, and 32 feet in height from floor to ceiling, and will afford accommodation for about 600 persons. All the seats are open benches, formed of red and yellow pine stained and varnished; and the gallery front is constructed of the same materials, and divided into decorated panels. Below the chapel is a school-room, capable of holding 350 children; also a large class-room and minister's vestry, which has a staircase direct to the pulpit. Both the chapel and school-room are heated with hot water. Mr. J. Hogg was the contractor for the masons', bricklayers', carpenter and joiners', plumbers', slaters', and plasterers' works; Mr. E. J. Thompson for the painting, glazing, and decorating; Mr. G. Patton for the gas-fitting; and Mr. D. Donkin for the iron gates and railing. The hot-water apparatus was erected under the superintendence of Mr. W. Pickering, one of the building committee. The whole of the works have been carried out from the designs and under the direction of Mr. G. Snaith, of Newcastle-upon-Tyne.——The corner stone of a new Baptist Chapel has been laid in Rye-hill, near the Scotswood-road. The building will be Italian in style. The ground-floor will be occupied by the school, above which will be the chapel. There will be three entrances to the chapel, approached by a flight of stone stairs. Immediately above each door will be a circular-headed window, of ornamental design, with a balcony. A feature in the front elevation will be imparted by the introduction of Minton's bright-coloured enamelled tiles. Galleries are carried round three sides of the chapel. The whole will accommodate about 1,500 persons, and the school beneath about 900 scholars. The outside dimensions of the chapel are 85 feet by 59 feet. Mr. James Cubitt, of London, is the architect; and the following have been appointed to carry out the various works:—For mason work, Mr. R. Robson, builder, Newcastle; for the joiner work, Mr. Berry, Newcastle; and for the plumbing, Mr. Watson, Newcastle; and for the slating, Mr. T. Sanderson, Newcastle. The amount of the present contracts for the chapel is about 3,300*l.*

Derry (*Ireland*). — The third Presbyterian church in this city has been re-opened for Divine service, after having undergone alterations and improvements. The interior of the building has been remodelled and renovated.. The ground-floor and gallery have been improved. The pews are reduced in height, the backs being sloped, and capped with Italian walnut, polished. The front of the gallery has been new panelled, having also a new cornice. The box pulpit has been superseded by one of a platform kind. The entire works, which have involved an expenditure of about 1,500*l.*, were carried out from plans furnished by Messrs. Boyd & Batt, of Belfast and Derry, architects, and under their superintendence. Mr. Matthew M'Clelland, builder, was the principal contractor. The contract for heating and lighting was carried out by Mr. A. Baxter, and the painting and decorations were done by Mr. W. Sterling.

SCHOOL-BUILDING NEWS.

Yarmouth.—The trustees of the Grammar School have announced that it is in contemplation to erect a permanent building capable of accommodating 200 boys.

Stradbroke (*Ipswich*).—A National School, which owes its existence in a great measure to the exertions made by the Rev. J. C. Ryle, has been opened in this village. The building is of red brick and slate, of that peculiar compromise between the picturesqueness of the Tudor and the lightness and economy of space of the modern utility style, which has been so much favoured of late years in National schools. The building mainly consists of two large school-rooms, one 60 feet by 18 feet, and the other 47 feet by 18 feet. These are placed in such a position towards each other as to form a right angled triangle, the side of one, finishing with the gable end of the other, forming the principal face of the structure towards the road. A broken coping in steps runs up the sides of the gable. A large Gothic-shaped window in a series of lights throws a body of light through the gable end into the room: there is a projecting string of moulded bricks under the window, and the unbroken space of the walls is everywhere adorned with designs in black brick. The chimneys are not stacked, but are of the Tudor style, and there is a stained timber belfry over the centre of the building: a fancy ridge crowns the pitch of the roofs. In front of the building is a tolerably spacious playground for the children of the lower school, and at the back is a similar space set apart for the boys of the upper school, and in the angle at the back, formed by the junction of the two large school-rooms, are a class-room, 13 feet by 13 feet, a stable for the use of the upper school, and other provision, affording separate accommodation for the two schools. The school-rooms have open stained timber roofs, 20½ feet from the pitch to the floor, and the walls are 16½ feet high. Mr. R. M. Phipson was the architect of the schools, which have been built under the

superintendence of Mr. Albion, clerk of the works, from London. The builder was Mr. Godbold, of Harleston. The contract was 645*l.*; the cost of the land 90*l.*; the fencing and gates 53*l.* 11s. 5d.: and the fittings 50*l.*, making a total of 838*l.* 11s. 5d.

Buckland (*Aylesbury*). — The new National Schools at Buckland have been formally opened by the Bishop of Oxford. The cost of the erection, exclusive of site, has been about 650*l.* Sir A. Rothschild presented the site, half an acre, and a donation of fifty guineas. The Queen, who was an owner of land in the parish, gave twenty guineas. About 100*l.* still remains to be raised. The schools are Early English. Mr. Devey, of London, was the architect.

Chipping Campden (*Gloucestershire*). — The completion of the restoration of the Campden Grammar School, one of the most ancient foundations in the country, has just been celebrated. The undertaking was commenced in 1860, the inadequate revenues, and the absence of accommodation for boarders, threatening the gradual decline of the school unless vigorous efforts were put forth. The result has been the collection of about 1,500*l.*, which sum has been devoted to new buildings suitable to the requirements of the district. The old school-room has been retained, the walls being carried up for the advantage of the interior; the ancient ceiling, with its oak beams, raised; and the windows heightened by the introduction of transomed lights. A class-room, with open timber roof, has been appended on the east side; and spacious dormitories, in two stories, have been constructed over the school. An entirely new residence has been built for the accommodation of the head master, in communication with the school building and the several dormitories. The entire structure forms an elevation of picturesque outline, with gables, dormers, and bell turret, in masonry, and in harmony with the style of the ancient domestic architecture, of which the interesting old town of Chipping Campden retains numerous examples. In the gable over the principal bay window is a sculptured panel, with the armorial bearings of Fereby, the original founder, and of the co-founder, Baptist Hickes, first Viscount Campden. The work of restoration and re-building has been carried out by Mr. E. Tomes, of Chipping Campden, from the designs and under the superintendence of Mr. C. A. Buckler, of Oxford, architect.

STAINED GLASS.

St. Mary's, Wokingham (*Berks*).—A stained-glass window has recently been placed in the east end of the south side aisle of this church, the gift of Miss Twycross, of Wokingham, and executed by Mr. Holland, of Warwick. The subjects are our Lord's Baptism, Crucifixion, Resurrection, and Ascension, under appropriate canopies, with pedestals and inscription. In the tracery are angels bearing crowns, palm-branches, and scrolls, with texts of Scripture, the lamb, pelican, &c. A south aisle memorial window has also been put up by the same artists, containing representations of Christ raising Jairus's daughter, in three lights, under a floriated canopy of the lily, in tracery. Figures representing Faith, Hope, Charity, Piety, Prudence, and Devotion.

St. Mary's, Guildford.—A stained-glass ornamental window has been erected in this church, with medallion, containing angels bearing texts; also a lancet light containing monograms and thorn ornament, both the gift of Sir H. Austen, and executed by Mr. H. Holland, of Warwick.

Dodford Church, Daventry (*Northants*). — A stained-glass window has been placed in Dodford Church, by Mr. R. Hewitt, of Northampton. The window is at the east end of the north aisle, and is a Perpendicular one, of three lights. The north aisle itself is Early English, but a later window had been inserted in the east end. This was found so dilapidated from age, that the stonework had to be made new. A repetition of the old window has been put in by Mr. Roberts, of Weedon, builder. The glass is the work of Messrs. Powell, who have been employed for windows at St. Giles's, Northampton. The centre light represents the birth of our Saviour; the right-hand light the Magi on their journey; the left-hand light the angel appearing to the shepherds. Inscriptions on the glass, and on a marble slab underneath, commemorate the members of Mr. Hewitt's family.

Windsor Chapel.—Part of the glass for the Prince Consort's memorial window has reached Newark, and workmen have been engaged in the necessary work for its completion. The new window will be erected in the place of the large plain glass window in the east. About 900*l.* have already been subscribed for this purpose.

Kendal Church.—This church has just been embellished by a further addition to its numerous stained-glass windows. The church itself being Perpendicular, the window is the same. It consists of three main openings surmounted with tracery, which contains an angelic host bearing symbols of our Lord's Passion. The lower part contains the three principal subjects,—the centre consisting of the Resurrection of our Lord, with the inscription, "I am the Resurrection and the Life." On the left-hand of this is St. Paul preaching at Athens, his right-hand pointing to our Lord in the centre, his left to the idolatrous Athenian temples which are delineated in the same compartment. On the right-hand occurs the third subject, which contains a conventional resemblance of the deceased vicar (to whose memory the glass is dedicated), in his robes of office performing the burial service. Kendal Church, in its unrestored condition, is shown in the distance. The subjects are surmounted with tabernacle work on ruby grounds, containing, in the apertures, the Crucifixion, and St. John and Mary. These canopies are supported by columns which inclose the subjects, having angels displayed upon them. At the foot of the subjects are pedestals having inscribed scrolls. The artist was Mr. Warrington, of London. The same artist has also inserted in the centre compartment of the Strickland window the coat of arms, in stained glass, of the ancient family of Sizergh Castle.

THE MARYLEBONE AND WEST LONDON SCHOOL OF ART.

This school is now, we believe, the largest in London, excepting the Central School, at South Kensington, and deserves the help of those who are able to give it, especially from the manufacturers of the district. The following analysis of the occupations of the students during the year 1863, is interesting:—Artists and designers, 32; draughtsmen, 14; modellers, 8; decorators, 36; glass painters, 25; goldsmiths' chasers, &c., 21; metal workers, 15; cabinet-makers, 24; carvers in wood and stone, 42; upholsterers, 23; carpenters and joiners, 29; engineers, 16; salesmen and clerks, 22; teachers, 27; engravers, &c., 8; coach-painters, 2; die-sinkers, 7; photographers, 6; pianoforte and harmonium makers, 8; gardener, 1; plasterers, 5; chairmaker, 1; gilders, 5; mould-carvers, 3; painter, 1; sign writers, 6; lace maker, 1; bricklayers, 3; ivory carvers, 4; turners, 2; bookbinders, 2; papier-maché workers, 2; lamp maker, 1; marqueterie cutters, 2; herald painters, 3; at school, 16; miscellaneous, 7. This school obtained two national medallions, ten medals, sixteen prizes, and fifty-nine "passes" in various subjects of personal examination before the Government inspector. Two of the students have been recently admitted students of the Royal Academy. The master is Mr. Macdonald Clarke, and the school is held at 202, Portland-road.

GAS.

The committee of the Devizes Gasworks are about to enlarge their means of gas production by an outlay of 2,000*l.* This expenditure has, it is said, become absolutely necessary to enable them to meet the increased demand.——The Windsor Gas Company are reducing the price of their gas to 5s. 6d. per 1,000 cubic feet, being a reduction of 6d. per 1,000.——The Worcester New Gas-light Company have declared a dividend of 10 per cent. per annum, free of income-tax, for the past half-year. The last report of the gas inspector to the Local Board of Health states that in five experiments he found the average illuminating power of the gas to be 13·42, or 1·42 above the contract quality, which is 12 candles' illuminating power.——The Newcastle-under-Lyne Gas Company promise to reduce the price of their gas 6d. per 1,000 feet at the end of a year from the time when they took the concern into their own hands.——A bill, for port, Alverstoke, and Rowner with gas, has just been printed. Clause 32 limits the price of the gas supplied to 4s. 6d. per 1,000 cubic feet, including the supply and fixing of meters. Clause 37 provides that the gas shall be of such a quality as to produce from an argand burner, having fifteen holes and a 7-inch chimney, and consuming 5 cubic feet of gas per hour, a light equal in intensity to that produced by 12 sperm candles of six in the pound, burning 120 grains per hour; and shall, as far as reasonably practicable, be free from sulphuretted hydrogen and other compounds deteriorating its purity.——The Collingham Gas Company (Newark) have declared a dividend of 6 per cent. The report stated that the consumption of gas has again increased considerably, and the works have been extended and improved without trenching on the reserved fund.——It is proposed to enlarge the Devizes Gas Works at a cost of 3,000*l.*——The price of gas in Gloucester has been reduced from 5s. to 4s. 6d. per 1,000 cubic feet.——The Brecon Gas Company have declared a dividend at the rate of 10 per cent. per annum, besides "deficiencies" of former dividends for 1856, 1857, and 1858.——The Chester United Gas Company have declared their usual dividend of 7 per cent. on the preference stock and new shares, and a dividend of 10 per cent. on the ordinary stock; also the arrears of dividend of 1860, amounting to 33s. 4d. per cent.——The York Gas Company have declared a dividend of 10 per cent. per annum for the last half-year.——The Thorne Gas Company are said to be "in a flourishing condition; and the committee are enabled to declare a handsome dividend for the past year, besides reducing the price of gas 10d. per 1,000 feet, and also keeping a very respectable reserve fund."

Miscellanea.

The late Leo Von Klenze, Architect.—We content ourselves at present with mentioning the death of this eminent architect, in Munich, on the 26th ult.

The Metric System.—Mr. Ewart, M.P., has given notice in the Commons that on a future day he will move for leave to bring in a Bill to legalise the use of the metric system in this country.

A Valuable Brick.—A notary has forwarded to the Bank of France a brick with a 1,000fr. note glued on it, which has been paid, and will be kept in the Bank Museum of Curiosities. It had been for fifteen years glued on the wall of a peasant's house, and considered as a pictorial curiosity by the man who found it, and did not know its value.

The Suez Canal.—We understand that Mr. Aiton, the contractor for the Dumfries and Lockerbie Railway, has contracted for the formation of about 40 miles of the Suez Canal in Egypt. The work is expected to extend over a period of four years. Mr. Aiton has advertised for enginemen, firemen, deck-hands for dredging-machines, bargemen, smiths, carpenters, and able-bodied labourers.

The Threatened Nailers' Strike.—A meeting of nail masters has been held at Dudley, "to further consider the workmen's prices." It was unanimously resolved that an advance of wages of 10 per cent. on hobs and other leading nails, and on such nails as are brought into competition with machinery, and those also the work of women and children, a considerable advance, though on a rather lower scale, should be given. Within the last eight months the nailers' wages have been raised from 10 to 15 per cent., and on spike nails 20 per cent.

The Newcastle-upon-Tyne Society of Antiquaries.—The fifty-first annual meeting of this Society has just been held in the old Castle at Newcastle. The Rev. Dr. Bruce read the report. In it the council states that the object for which subscriptions were raised and ground purchased, namely, the erection of a new museum for the collection of Roman and other antiquities, has not, as yet, been attained. The ground, indeed, has been secured, but no funds are forthcoming for the building. They announce that plans, drawings, &c., were prepared for the museum buildings by Mr. John Dobson, architect, and that the cost of these, amounting to upwards of 38*l.*, was presented to the Society by that gentleman. Mr. Longstaff called attention to the proposed restoration of Brancepeth Church by Mr. Salvin. The church, he said, was perhaps unique in the kingdom, and it was to be regretted that any alteration was to be made. Lord Boyne and Mr. Salvin were to be written to on the subject.

THE THAMES AND THE METROPOLITAN SEWERAGE.—Sir John Rennie, in commenting on the drainage works in London, is said to have predicted that water will run short in the Thames, and that ships will not be able to come as high up the river as they do now. He says that already the effects of the sewers in carrying off water are felt at Kew, where the plants have suffered seriously from want of water.

STATUE OF ROSSINI.—The Marquis Salamanca and the Chevalier Delahante, in the name of the Society of Roman Railways, have presented to the town of Pesaro a statue in bronze of Rossini, designed and manufactured by Marochetti. The inauguration of the statue will probably take place on the 29th of February, the anniversary of his birth, when he will attain his seventy-second year.

THE PROPERTY SURVEYORSHIP OF NEWCASTLE-UPON-TYNE.—At a recent meeting of the town council, a list of candidates for the vacant office of property-surveyor was presented. Fifty-three candidates had sent in testimonials. After some discussion, it was agreed that the list should be referred to the finance and town improvement committees jointly; these committees to call a special meeting of the council when they are ready with their selection.

RAILWAY MATTERS.—The traffic receipts of railways in the United Kingdom amounted, for the week ending the 16th of January, on 11,146 miles, to 533,795*l.*, and for the corresponding week of last year, on 10,749 miles, to 490,231*l.*, showing an increase of 397 miles, and of 43,564*l.* in the receipts.——The "General Terminus and Glasgow Harbour Railway Company" have transferred their undertaking to the Caledonian Railway Company on the guarantee of a dividend on the company's stock, at the rate of 4 per cent. per annum, for three years, commencing on 1st February, 1864, and at the rate of 4½ per cent. per annum in perpetuity after 1st February, 1867. The Caledonian pay all debts and costs.

THE HOLOCAUST IN SANTIAGO.—The frightful burning to death of 2,000 ladies in the church of La Campania, Santiago, by the ignition of the hangings with which the church was decorated to celebrate the dogma of the "Immaculate Conception," has struck all with horror, and has led to many speculations as to the possibility of a similar dreadful calamity in any of our own theatres, churches, or assembly-rooms,—a possibility to which we have often before now pointed attention, and to which we shall return. Had the arrangements in the Santiago church been made with the express view of bringing about such a catastrophe, they could scarcely have been more complete.

A PLAGUE AND POVERTY STRICKEN VILLAGE.—Lady Pasley, of No. 7, Esplanade, Plymouth, tells in the *Times* a terrible story of the misery of a little fishing-village, called Beer, in the neighbourhood of Axminster. The place is plague-stricken with measles. The inhabitants are all fishermen, and at this time of the year always in want. The children do not die of the disease so much as of weakness and starvation after it. Mrs. Bingham, Lady Pasley's sister, who lives near Axminster, writes, "The bell is tolling constantly, and five or six children brought over here in a cart to be buried daily. The mothers themselves look like hungry wolves. The poor children die in the dark, and their mothers have to watch for daylight to see them, not having a candle in the house."

ELECTRO-CHEMICAL ENGRAVING ON METAL.—A paper, "On a Method of Instantaneous Engraving on Metal," has been read at the Society of Arts, by M. Vial, of Paris. He described various modifications of his discovery, which are patented. In one case, a drawing in metallic ink is laid damp upon a zinc or steel plate, and pressed for two minutes, when the design is transferred to the plate. In another case, an engraving on paper is saturated with a metallic solution, as of copper, and laid upon a zinc plate, and pressed, when the copper is precipitated in a few moments over the plate, except where the greasy ink covers the paper. After a farther process positive plates are taken from these negatives by means of printed impressions. A third process consists in drawing on a steel plate with greasy ink, and plunging it into a copper solution, containing a little nitric acid. This also is perfected by a subsequent process. In the discussion on the paper the processes were generally admitted to be of value and importance. M. Vial has had the recognition and thanks of the French Institute.

THE LATE MR. W. H. HUNT, ARTIST.—We notice with extreme regret the death of Mr. Hunt, the well-known admirable painter in water-colours, which took place on the 10th instant. Mr. Hunt had attained the age of 74.

RAILWAY BILLS.—The Board of Trade have reported to the House of Commons that the Bills relating to railways in the United Kingdom ask authority for new companies to construct 2,264 miles, and existing companies 835 miles,—in all, 3,099 miles of new railroads. There are also 66 miles of deviation lines proposed.

SCULPTURE COMPETITION OF THE ART-UNION OF LONDON.—The works prepared in competition for the premium of 600*l.* offered by the Art-Union of London for a life-size group will have to be sent in by the 1st of March. We understand that the Science and Art Department will afford space for the exhibition of the groups in one of the new courts of the South Kensington Museum.

WOODEN PAPER.—M. Bardoux, a manufacturer, of Poitiers, is said to have succeeded in manufacturing paper from various descriptions of timber, such as oak, walnut, pine, and chestnut, and from vegetables, and without the addition of rags. M. Bardoux asserts that his invention will cause a reduction of from 60 to 80 per cent. in the price of paper. Samples of the wooden paper have been exhibited at the office of the *Journal des Inventeurs*.

PORTRAIT OF THACKERAY.—Mr. Ayling (New Oxford-street) has published a photograph of a portrait, by Mr. Samuel Lawrence, of our eminent countryman—too soon lost. It is the last portrait for which Mr. Thackeray sat to a painter, and is remarkably characteristic and like. He is represented reading, with the paper held upright and near the face, as was his manner, and conveys strikingly his best expression. As a photograph, too, it is very good.

BRITISH INSTITUTION.—The present exhibition of the works of British artists, in the gallery of the British Institution, Pall-mall, consists of 633 pictures and 16 pieces of sculpture. Altogether deficient as usual in works of high class, it nevertheless includes several good pictures by Sir Edwin Landseer, Mr. E. W. Cooke, Mr. Alexander Johnston, Mr. Pickersgill, Mr. J. R. Powell, Mr. T. Danby, Mr. G. Smith, Mr. F. Dillon, Mr. F. Weekes, Miss Kate Swift, Mr. J. Pettie, Mr. George Stanfield, and others.

THE LIVERPOOL WOOD TRADE.—From the local circulars it appears that the American pine import trade has greatly increased, and prices have hence fallen, although the Lancashire and other consumption has also much increased beyond that of the previous year. From the Baltic the imports have been on the increase; but Hull is a chief port for the Baltic deal, batten, and timber trade. The last year's imports to Liverpool of Colonial woods, including, of course, the importation of American woods from Canada and New Brunswick, was the largest ever known.

BARRACKS. The improvements suggested by the Army Sanitary Commissioners on the occasion of their visit to St. Mary's Casemated Barracks, Chatham, on that establishment being evacuated by the invalid depôt, have now been carried into effect; and the building, which will accommodate about 1,200 officers and men, will be ready for the reception of troops during the coming summer. The *Army and Navy Gazette* says, in order to render the barracks more healthy as quarters for troops, the ventilating arrangements in each of the casemated rooms have been very materially altered and improved, while the accommodation will be still further increased by placing a smaller number of troops in each of the compartments.

ELECTRO-MAGNETIC ROTARY ENGINE. — The proposition to introduce electricity as a motive power has been revived in America; Captain John Reeves, of New York, having invented and patented an electro-magnetic rotary engine for producing motive-power by electricity to any extent, and for any purpose required. The inventor states that in his experiments "he has discovered, and is now prepared to verify the fact, that electricity can be diffused over surfaces to the extent of hundreds of superficial feet, and thereby cause an electro-magnetic attraction, which acts on and sets in motion the most powerful machinery for producing motive-power, and this at a most reasonable expense for material consumed." The inventor has a working model at the Capitol, Washington, with plans of different descriptions, which he is preparing to exhibit to the Government.

THE THAMES EMBANKMENT.—The men are proceeding actively with that portion of the embankment which will extend from Waterloo-bridge to the east end of the Temple Gardens. The contract is being executed by Mr. Ritson. It is understood that none of the houses either in Norfolk-street, Arundel-street, or the Temple will be removed.

THE RESTORATION OF ST. DAVID'S CATHEDRAL. There is every probability that the proposed restoration of this ancient cathedral will be eventually carried out, as subscriptions amounting to about 10,000*l.* have already been promised towards the work. The estimated cost is 30,000*l.*

RE-VALUATION OF THE PARISH OF NEWCHURCH, RYDE.—The committee appointed at the late vestry meeting met by appointment at the York Hotel, Ryde, for the purpose of considering the list of tenders for the valuation of the whole of the parish of Newchurch. The tender of Mr. Francis Newman, of Ryde, amounting to 400*l.*, was accepted by a large majority.

METALLIC BELTS FOR PULLEYS. — Mr. Thos. Luders, of Rue Gaillon, Paris, proposes the use of steel bands as a substitute for leather for driving machinery. The metallic bands are to run upon wooden or iron pulleys, covered with two or three folds of leather. The ends are either brazed or laced together with leathern thongs, the holes being in the latter case bushed with soft metal.

THE HOUSES OF PARLIAMENT. — Sir Goldsworthy Gurney, by whose exertions the physical atmosphere of the Houses of Parliament has been much improved, has for some months been severely afflicted by paralysis; augmented, it is thought, by the attention which he has for some years bestowed upon the ventilation of the Houses. Being quite unable to resume his duties, he has received a prolonged leave of absence; and Mr. Alexander Gordon, civil engineer, has been installed in the office.

METROPOLITAN RAILWAYS AND THOROUGHFARES.—A deputation from the Royal Institute of British Architects has had an interview with the president and vice-president of the Board of Trade, at the office of the Board of Trade, Whitehall, on the subject of metropolitan improvements and throughfares in connexion with the various railway and other projects affecting the metropolis, and in support of petitions presented to both Houses of Parliament on this matter by the Institute.

LANDLORD AND TENANT.—The case of Bargent *v.* Thomson, before Vice-Chancellor Stewart, was where a lessee, under a covenant to repair on three months' notice, with penalty of re-entry, received notice on the 16th September to repair, according to a specification, and out of the twenty-two items specified only two were not commenced, and eight not completely finished, on the 18th December, the latter having been delayed by the state of the weather. The Vice-Chancellor held, under the circumstances, that the lessee was entitled to be relieved by injunction against ejectment for the breach of covenant.

THE RIVER WEAR COMMISSIONERS.—The committee say in their report, read at the last meeting of the Commissioners,—"We have to report that we have carefully considered the last proposal of Mr. Meik for strengthening the north-east pier of the South Outlet; and have determined, under the authority given to us at the last Board meeting, to adopt it. And in furtherance of that object we have obtained tenders for the work, and have accepted the offer of Mr. W. Scott to complete this work for 11,929*l.* 11s. 6d. We have also obtained additional tenders for the caisson for the Graving Dock, and beg to recommend the Board to accept the offer of Messrs. Hawks, Crawshay, & Co. for the sum of 2,300*l.*"

OVERCROWDING AND FEVER. From the village of Festiniog, in Merionethshire, and the hamlets immediately adjacent, an "epidemic" was recently reported, of so serious a character, as to call for the intervention of the medical department of the Privy Council. In a population of 6,000 or 7,000, there had been 600 or 700 cases of fever. Dr. Buchanan was accordingly despatched on a mission of inquiry. He reports that in cottages containing two low bedrooms, one 8 feet by 6 feet, and the other 12 feet by 6 feet, ten, and even twelve people were found to be lodged. In some of the lodgings the beds were never vacated, nor the rooms ventilated, either by day or by night. The work in the quarries was continued all through the twenty-four hours by relays of labourers.

Vendor and Purchaser.—Conditions of sale under a decree of the Court of Chancery, in the suit Defree *v.* Bedborough, contained no provision for the return of the deposit in the event of non-compliance by the purchaser, but a stipulation that, in the event of non-payment of the purchase-money, or other default, an order might be made by the Court for a re-sale and for payment by the purchaser of any deficiency and costs. A purchaser at the sale paid his deposit, but, before completion, became bankrupt, and his assignees elected not to complete. The deposit was held to be forfeited. The case was that of Mr. Boucicault, the well-known dramatist, heard before Vice-Chancellor Stuart.

Shakspearian Readings: Plymouth.—Miss Glyn, too seldom heard in London, is reading Shakspeare at the Plymouth Mechanics' Institute with great success. The play of "Antony and Cleopatra" has been especially praised. Our informant says, "Mark Antony's passionate love—a love which overpowers his reason, and makes both him and his army the slaves of a woman's caprice—was finely depicted; and Miss Glyn succeeded no less in the representation of the vain, jealous, and doting Queen of Egypt. The part of Cleopatra is one of the finest pieces of Miss Glyn's impersonations on the stage; and in the reading it lost little of the intense feeling which she always threw into it."

The Workmen's Club Movement.—A workmen's institute, in connexion with Holy Trinity district, has been inaugurated at Maidstone.——At Eastbourne, an effort is being made to establish a workmen's hall, and one-fourth of the furnishing fund has been subscribed. The hall has been provided by Mr. Leaf.——An influential meeting has been held in Liverpool, for the establishment of club-rooms for the working classes there. The mayor presided, and the secretary to the London Workmen's Club and Institute Union was present, and explained the nature of the movement. Appropriate resolutions in favour of the objects of the meeting were passed.

Battersea Working Men's Club and Institute.—The opening of this club took place on the 8th inst., under the presidency of the originator, Mr. Charles Curling. From the report of the Provisional Committee, it appeared that a house in Church-road had been taken, and, under the superintendence of Mr. E. C. Robins, the honorary architect, had been repaired and fitted up for the purposes of the institute. About 200*l.* had been expended, and, as little more than half was as yet subscribed, pecuniary aid was desired from the wealthy to enable the institute to start free of all liability. The Rev. H. Solly, the secretary of the Union, said, about sixty clubs had been established during the last two years. In the course of his address, Mr. Solly observed that the object of clubs and institutes for working men was to supply a great and acknowledged want, and to satisfy the craving for social intercourse which he believed to be divinely inspired for a good purpose, and therefore intended to be gratified. They sought to do this without leading the working man into habits of intemperance, but rather by offering him a helping hand to enable him to resist the seductions of the gin palace, and to be interested not only in his own improvement, but also in the welfare of his fellows.

Opening of Salisbury and South Wilts Museum.—The nucleus of this collection consisted of objects brought to light during the excavations made for the drainage of the city. These were collected by Mr. Brodie, and were purchased by subscription. A room at the Market House was temporarily rented, in which the drainage relics and other articles subsequently acquired were deposited, and the collection was thrown open to the public in 1861. The progress of the Museum has since been rapid. The late Doctor Fowler and his wife purchased a range of buildings in St. Ann's-street, which they conveyed to trustees for the exclusive use of the Museum. Since that time, numerous alterations have been made in the building itself. The rooms have been lighted with gas, and fitted with cases in which this now rather important collection has been arranged. On the evening of the day of opening a crowded *conversazione* was held in the local assembly-rooms, when the Mayor and the Bishop of Salisbury and other gentlemen spoke, and Archdeacon Harris delivered an address on the Ancient Lake Settlements of Switzerland, and the Rev. W. H. Jones one on Names of Places in the Vicinity of Salisbury.

Monument to Mrs. Browning, the Poetess.—Mr. Leighton has undertaken to design a monument to be placed over the grave of Mrs. Browning, in the Protestant Cemetery at Florence. The work will be of white Carrara marble, except decorations of black marble, inlaid on the white. The style adopted most resembles the Early Italian Renaissance. The composition comprises a large sarcophagus, sustained by six pillars, and having a lid of low pyramidal form.

Steam Cultivation.—A public meeting was held at Hereford, on Wednesday, the 10th inst., to take preliminary steps for the formation of a limited liability company. A large number of farmers of high reputation for intelligence and skill, cultivating upwards of 30,000 acres of land, have given in their adherence to the principle of steam cultivation, and no doubt ere long the steam-plough will be tearing up the red lands of Herefordshire.

Maidstone Cottage Improvement Society.—The first annual meeting of this society has just been held. Their first purchase was nine cottages in Stacey's-passage, Warwick-row, on which they expended, purchase and improvements inclusive, a sum of 702*l.* The net returns were already equal to nine per cent. per annum. A dividend at the rate of five per cent. was declared, and the residue set apart for a reserve fund. Six cottages in Peter-street were about to be purchased. Of the society's shares, 167 have been taken, and 1,670*l.* realized.

Factitious Blocks of Wood.—Gustave Colomb, a civil engineer, of Switzerland, has patented an invention for manufacturing factitious blocks of wood of diversified shades or colours, intended especially to be divided by sawing into thin sheets for veneering, although the blocks can be applied to other purposes. The inventor takes shavings, made by hand-planing or by machine, which are rolled up by means of a spindle with crank, compactly on each other, to form bundles, several of which are closely packed in suitable frames. The bundles can be formed with shavings of the same kind of wood, or of several different kinds and colours; in some cases shavings of other thin and pliable substances are introduced; such as thin strips of soft metals, horn, whalebone, ivory, tortoiseshell, papier-maché made of sawdust, and any substance capable of being glued together with the wood shavings. When the frame has been filled up with bundles of shavings, it is dipped in a hot bath of well-liquefied glue. After this immersion, the bundles are submitted to strong pressure, and the blocks thus formed are then carried to a hot-air chamber, where they are sufficiently dried to be cut into thin sheets.

The Drainage of Bedford.—The council of the borough, acting as a local board under the Local Government Act, having it in contemplation to adopt a comprehensive and efficient system of sewerage and drainage, have thought it advisable, in preference to advertising for plans, to invite the attention of a few gentlemen who have had experience in the construction of works of this nature. The board propose to give a premium of twenty guineas for each set of plans not adopted. The projector of the scheme approved will be expected to make a trustworthy survey and furnish working drawings and specifications, and to superintend the carrying out of the works on terms hereafter to be agreed upon. The board will require a project for the disposal of the sewage matter, and also a general scheme of sewerage and drainage, so arranged that it will admit of being carried out by degrees. Copies of a circular to this effect have been sent to the following:—Mr. John Lawson, Westminster; Mr. Stephens, Borough Surveyor, Leicester; Mr. Clement Trapp, Manchester; Mr. Horsford, Bedford; Mr. Clements, South Shields; Mr. Usher, Bedford; Mr. Wm. Haywood, London.

TENDERS.

For new board-room and offices, for West Ham Gas Company, at Stratford. Quantities supplied by Mr. D. Cubitt Nichols:—

Hedges	£2,830 0 0
Sanders	2,725 0 0
Wood	2,683 0 0
L'Anson	2,674 0 0
Perry & Judson	2,657 0 0
Rivett	2,643 0 0
Hack	2,495 0 0
Hill & Keddell (accepted)	2,480 0 0

Alterations, &c., at No. 132, Regent-street. Messrs. Wimperis & Freeman, architects:—

Duncanson & Moultrie	£280 0 0
Tyler (accepted)	260 0 0

For furnishing ninety-six long and twenty-four short benches, for St. James's church, Bury, according to plans and specifications agreed upon:—

	Dantzic Oak.	English Oak.
Clarke	...	£1,200 0
Frost	£812	892 0
Burrell	...	879 0
Andrews	...	720 0
Redsall	690	...
Fake (the whole number)	685	...
Ditto (half the number)	...	342 10
Tooley (accepted)	537	...

Farrow (frames English oak, other parts Dantzic), £712 16s.

For three warehouses in Commercial-street, Whitechapel. Mr. N. S. Joseph, architect:—

Stap	£4,830 0 0
Mansfield & Sons	4,697 0 0

London: LONGMAN, GREEN, LONGMAN, ROBERTS, & GREEN.

PARTNERSHIP.—To SURVEYORS, LAND AGENTS, and AUCTIONEERS.—A Gentleman thoroughly experienced in all departments of the profession, and now manager in a leading London office, desires a PARTNERSHIP in an ESTABLISHED BUSINESS.—Address, in the first instance, by letter only, M. A. care of Messrs. Terrell & Chamberlain, Solicitors, 30, Basinghall-street, City.

PARTNER WANTED, to take the MANAGEMENT of an old-established GAS ENGINEERING and METER MAKING CONCERN, on advantageous terms. Capital required, 2,000*l.*—Apply, with real name, address, and reference, to L. X. care of Mr. Steel, 2, Spring-gardens, Charing-Cross.

APPRENTICE WANTED (outdoor) to a Light Mechanical Business. Premium moderate—Apply to T. MUNRO, 4, Gibson-street, Waterloo-road, S.

TO ASSISTANTS.

A LONDON ARCHITECT requires the immediate SERVICES of an efficient ASSISTANT, who can get out (from rough sketches) geometrical and perspective drawings. State previous engagements, age, and salary expected.—Apply by letter, to B. 22, Henrietta-street, Covent Garden, W.C.

TO PAINTERS AND DECORATORS.

AN OLD-ESTABLISHED FIRM, in a large provincial town, want a first-class energetic Man, as FOREMAN. He must thoroughly understand all the departments, measure work, and make up accounts. References as to ability will be required—Address, stating terms, to W. R. care of Noble & Allen, 117, Long Acre.

BOROUGH of DERBY.—SURVEYOR WANTED.—The Local Board of Health of the Borough of Derby are desirous of appointing a SURVEYOR. He must be competent to prepare plans, drawings, estimates, and specifications of all works connected with the sewerage and drainage, as well as of the metalling, paving, and repairs of the streets, together with the public Lighting and cleansing of the borough, and to superintend such works. He must be able to test the materials required, and see to the fulfilment of the conditions of the contracts for executing the above or similar works. He will be required to report upon all newly projected streets and new buildings within the borough, both as to their drainage and convenience, and generally as to their conformity to the bye-laws and building regulations of the Board. He will also have to report and advise upon all nuisance cases involving structural alterations necessary for their abatement; to keep proper accounts connected with the departments of labour and materials; to attend the meetings of the Local Board and their committees, and to carry out such orders as they may from time to time direct, in connexion with his office. For the duties of Surveyor to the Local Board, a salary of 200*l.* per annum will be given; but, in addition to the above, the person appointed will be required to act as Surveyor to the Corporation, in the management of their estates and buildings. For these and similar duties a further salary of 50*l.* a year will be given. The whole time of the Surveyor must be devoted to his duties, and private practice will not be allowed. Office accommodation and the services of a clerk are provided. Candidates are requested to forward their applications, with testimonials, marked "Appointment of Surveyor," to the Clerk of the Local Board (from whom further information may be obtained), on or before MONDAY, the 22nd day of FEBRUARY instant.—By order,
JOSEPH JONES, Clerk to the Local Board of Health.
Full-street, Derby, February 5, 1864.

TEN THOUSAND POUNDS READY TO BE ADVANCED by the TEMPERANCE PERMANENT LAND AND BUILDING SOCIETY, on Freehold or Leasehold Property, for any period of years not exceeding fifteen, the mortgage being redeemable by equal monthly instalments. Interest (in addition to a small premium), 5 per cent. on the balance each year.—Apply to HENRY J. PHILLIPS, Secretary.
Offices, 34, Moorgate-street, London, E.C.
NOTE.—More than a quarter of a million pounds sterling have been advanced upon house property alone.

MONEY.—IMMEDIATE CASH ADVANCES MADE ON
FREEHOLD, LEASEHOLD, and COPYHOLD PROPERTY
TIMBER, WINE, and SCRIP WARRANTS.
BANKRUPTS' and INSOLVENTS' CASES CONDUCTED.
Balance-sheets Prepared, and Meetings of Creditors Convened
Mr. RICHARD CROSSLEY, ACCOUNTANT and BUSINESS AGENT
17, Moorgate-street, Bank, London.

MONEY on FREEHOLD and LEASEHOLD PROPERTY, by the
MUTUAL LOAN FUND ASSOCIATION
(Incorporated by Act of Parliament, 1850), 14, RUSSELL STREET, Covent Garden, W.C. Advances from 100l. to 1,000l. upon Freehold and Leasehold Property for any term up to ten years. Mortgages redeemed, and the advance can be repaid by easy instalments. Facilities afforded to tenants to purchase the houses they occupy, and the repayment of the advance taken as rent. Greater advantages are offered to borrowers than in building societies, there being no shares to subscribe for, or competition for an advance, and no deduction from the loan. No preliminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope.
EDWARD HARPER, Secretary.

ADVANCES are made by the SOVEREIGN LIFE OFFICE, 43, St. James's-street, London, of sums not exceeding 1,000l to Officers and other persons resident in England, upon their securing and giving two sureties for repayment by instalments in three years, at five per cent. interest.

BUNNETT & CO.

PRIZE MEDAL, GREAT EXHIBITION,
FOR
REVOLVING IRON SHUTTERS.

No. 1.—Patent, Bank Quality, with best Worm and Wheel Gearing, *6s.* per foot.
No. 2.—Patent, for Shops and Offices, with best Chain Gearing, *5s.* per foot.
No. 3.—Patent, for Private Houses, without Gearing, raised and lowered with Balance Weights, *3s. 6d.* per foot.

BUNNETT & CO. invite the attention of Architects and Builders to their recent Improvements in LIGHT REVOLVING IRON SHUTTERS for the WINDOWS of PRIVATE HOUSES, raised and lowered with graduated balance weights, without any gearing.

A matured experience, extending over twenty-five years, has convinced the Patentees that *no permanent dependence can be placed in any other*
SYSTEM OF
SELF-COILING SHUTTERS.

BUNNETT & CO.'s
Widely-known and well-appreciated
BANK SHUTTER
requires no comment, as it is in use in a large majority of the Banking Establishments, Goldsmiths' Shops, and Public Offices of the United Kingdom and the British Colonies; but the Patentees wish to make it known that they have recently completed extensive Additions to their
WORKS AT DEPTFORD,
and have erected new and most powerful Machinery with the view of meeting the largely-increasing demand for the
REVOLVING IRON SHUTTER,
With all necessary Despatch.

LONDON OFFICE,
17, QUEEN STREET, CITY;
GLASGOW OFFICE,
199, BUCHANAN STREET.

THE GREAT FIRE IN CITY.—"A closer examination yesterday of the track of the recent fire in Wood-street, shews in a striking manner how much it was confined to a class of buildings the interior arrangements and means of communication of which appear to have been made in defiance or ignorance of the principles which now regulate such matters, under the operation of the Metropolitan Building Act. The warehouses and offices which have perished seem to have been separated from each other by thin lath and plaster partitions for the most part and only in one instance was there an iron door between one part of the interior of the same building and another, such as is now commonly used and made imperative, indeed, in the construction of warehouses, as an invaluable means of shutting off communication in case of fire. That iron door, too, which remains unburned, would have been completely effectual in arresting the flames in that direction, had they not penetrated by a vulnerable point into the part of the building which it protected.
THE USE OF IRON FOR SAFETY AGAINST FIRE
was most conclusively proved by a very remarkable circumstance. The large and handsome warehouses of Messrs. J. & R. Morley, situate at the corner of Gresham and Wood streets, overlooked by a large window on the ground floor at the back of the little court in which the fire originated, and to which it was at first confined.
THIS LARGE WINDOW WAS PROTECTED ON THE OUTSIDE BY A REVOLVING IRON SHUTTER, AND THAT MORE AGAINST ROBBERY THAN FIRE.
On this occasion for some time the flames played fiercely, but harmlessly, about the outside of the window so guarded by the iron shutter. Had they once entered Messrs Morley's premises at that point, the stock stored inside, and estimated at from 250,000l. to 300,000l., would inevitably have been destroyed, if, indeed, the devastation would have ended in that one vast pile of buildings. Upon such a slender condition of safety did property almost fabulous in value, and belonging to a single firm, depend in this case."—*Times*, 22nd December, 1863.
THE REVOLVING IRON SHUTTER THAT ARRESTED THIS FIRE WAS MANUFACTURED IN 1849, BY
BUNNETT & CO., Patentees,
London & Glasgow.

SNOXELL & CO.'S

and see Specimens at the Office of

Messrs. PINDER SIMPSON & SONS, 39, Savile-row, London, and at the Museum of Practical Geology, Jermyn-street, W.

This stone (which is a perfect oolite) is raised in blocks of any workable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.

*** The above WEATHER STONE is 1s. 9d. per cubic foot, delivered in London.

W. & J. FREEMAN, Merchants in the various descriptions of STONE, GRANITE, and SLATE, for Engineering and Building Purposes. Supplies direct from the Quarries, by vessel or railway. SALES BY AUCTION.

TO SAW-MILL PROPRIETORS, ENGINEERS, AND OTHERS.

MESSRS. FULLER & HORSEY are instructed by the Administratrix to SELL by AUCTION, on FRIDAY, MARCH 4th, at TWELVE o'clock, on the PREMISES, Mermaid court, High-street, Borough, the PLANT and MACHINERY of a STEAM SAW MILL; including two beam steam engines of 20 and 24 horse power, two elephant steam boilers and fittings, five deal and timber saw frames, a circular saw bench, a grooving machine, moulding, 4 and 1 sash bar machine by Horne, shafting and pulleys, leather bands, frames and circular saws, 12 ft. mortise wheel and pinion, 2 lathes, fire-engine, quantity of tools, steam road carriage, chaff machine, two portable offices, two carts, a mare horse, and other effects.—To be viewed the day previous and morning of sale, when catalogues may be obtained on the Premises, and of Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.

KEYNSHAM BLUE LIAS LIME AND CEMENT WORKS, SOMERSET.

MESSRS. FULLER & HORSEY are instructed by the Official Liquidator to SELL by AUCTION, on WEDNESDAY, MARCH 16th, at TWELVE o'clock at the AUCTION MART, London, in One Lot, unless an acceptable offer be previously made by private contract, the newly formed FREEHOLD WORKS and ESTATE of the Keynsham Blue Lias Lime and Cement Company (Limited), together with the modern PLANT and MACHINERY. The property is freehold, and occupies a site of 7a. 2r. 26p. or thereabouts. The works were established for manufacturing blue lias lime from stone quarried on the estate, and for making cement. The existing kilns and ovens are capable of producing 700 to 800 tons of lime and 120 tons of cement weekly; both products are well approved by large contractors and eminent architects, the cement being used in many of the Government fortifications now in progress. Coals are supplied to the works at a very low price, and the Great Western Railway Station is within a short distance. The buildings are very substantial, and the machinery of the best description; the motive power is given by two iron water-wheels, driven by the river Chew, a regular stream of water, of great power, and there is a steam-engine, with boilers, if required. Additional supply of lias stone can be had from adjoining owners on favourable terms.—May be viewed till the Sale, and particulars had of Messrs. LUNDIN & SONS, Solicitors, 47A, Moorgate-street; of F. MAYNARD, Esq. Liquidator, 19, Broad-street, Chesapide; at the Mart; and of Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.

SALE of the AUCTION MART, LONDON.—The Directors of the Company of Proprietors of the Auction Mart will be prepared, at ONE o'clock p.m. on MONDAY, the 29th day of FEBRUARY next, at the Board-room of the said Company, in the Mart, to open sealed TENDERS from persons desirous of PURCHASING the premises generally known as the AUCTION MART, opposite to the Bank of England, London. Each Tender must be accompanied with a receipt annexed to it, signed by the proper officer of the Union Bank of London, acknowledging that the sum of £500 has been paid into the Bank by the person making such Tender to an account there of "The Trustees of the Auction Mart," and no receipt will be taken of the Tender of any person who shall not have delivered his Tender with such receipt annexed thereto into the hands of the Secretary of the said Company, either on SATURDAY, the 27th day of FEBRUARY next, between the hours of TEN a.m. and FOUR p.m. or upon the morning of MONDAY, the 29th day of FEBRUARY, between the hours of TEN a.m. and ONE p.m. after which last named date and hour no Tender will be received. The highest Tender will be accepted, provided the sum tendered shall be equal in amount to, or exceed, a reserved sum to be determined upon by the Directors of the said Company, and placed under seal prior to the opening of any of the Tenders. If upon opening the Tenders it shall be found that two or more Tenders are of the same amount, such amount being the highest amount tendered, the Directors of the said Company reserve the power of deciding which one of such two or more Tenders shall be accepted, and of rejecting the one or more not so accepted. A form of agreement has been prepared, which will have to be executed by the person whose Tender shall be declared accepted, immediately upon any such declaration being made by the Directors of the said Company, and in default of his so doing such person shall absolutely forfeit to the Company the sum he shall have previously deposited in the Union Bank of London. Copies of the said agreement, with copies of this advertisement, conditions of Tender, and forms of Tender, have been printed, and may be had gratis on application at the Auction Mart, or at the Offices of the Solicitors to the said Company, Messrs. UPTON, JOHNSON, & UPTON, 20, Austinfriars, E.C. The moneys deposited by all parties whose Tenders may not be accepted will be returned to them on application at the Union Bank of London on the 29th of February, between the hours at which a final declaration may be made with respect to the Tenders received and Four p.m. on the day ensuing any between the hours of Ten and Four p.m. The premises may be viewed by all persons provided with tickets, to be obtained as above.—By order of the Board of Directors, Auction Mart, January 30, 1864. G. F. JAQUES, Secretary.

WESTMINSTER.—Valuable and extensive Plot of Freehold Building Land, in Victoria-street, for immediate Sale.

MESSRS. DANIEL SMITH, SON, & OAKLEY have received instructions to SELL by AUCTION, at the MART, near the Bank of England, on WEDNESDAY, the 24th of FEBRUARY, at TWELVE o'clock, in one lot, a very valuable FREEHOLD ESTATE, consisting of a large PLOT of first-class BUILDING LAND, in a first rate position, in Victoria-street, Westminster, close to H.M. Abbey and the Houses of Parliament. It has a frontage of about 60 feet to Victoria-street, and of about 150 feet to Brewers green, with a considerable depth, and has an area of about two acres. The situation renders this land well adapted for the site of any public building or institution, or for the erection of professional offices, so much in demand in this neighbourhood; and a block of this size, in the heart of London, is becoming daily more difficult and costly to obtain. The land (except as to a very small portion), is held direct from the original freeholders, and is not affected by the liabilities of the Westminster Improvement Commissioners. Particulars, with plans, may be had of Messrs. W. and W. A. WALLER, 12, King-street, Cheapside, E.C.; at the Mart; and of Messrs. DANIEL SMITH, SON, & OAKLEY, Land Agents and Surveyors, No. 10, Waterloo place, Pall-mall, S.W.

COLLECTION of PICTURES, removed from 28, Ovington-square, Brompton, to the Auction Rooms, 21, Old Bond street, by order of the Executor of Robt. Lucas, Esq. of Dublin

MR. FRED. GODWIN will SELL by AUCTION, on TUESDAY, the 16th FEBRUARY, and Two Following Days, at TWELVE for ONE, a large COLLECTION of PICTURES, Ancient and Modern, Objects in Amber, and including specimens by—

Ostade	Sir D. Wilkie	Wouvermans
Huchtenburg	Reynolds	R. Wilson
Both	Van Dyck	Cuyder
Watteau	Rotydiel	Vandervelde
Wyck	Swebach	E. Goss

and by various other masters.—The Pictures may be viewed on the 12th and 13th inst. and catalogues had at the Rooms; and at Mr. GODWIN'S Offices, 3, Halkin-terrace, Belgrave-square, S.W.

RAILWAY HORSES.—OFF THE BOGNOR BRANCH.—TO BE SOLD BY AUCTION, BY

MR. J. GOWER, at his REPOSITORY, BARBICAN, FRIDAY, FEBRUARY 19, at ONE o'clock, about 40 first-class, young CART HORSES, the property of Messrs. Jackson & Dyer, that have been employed on the Bognor Branch of the London, Brighton, and South Coast Railway, nearly completed. The horses are known as five Horses, bred by farmers in the neighbourhood; were bought expressly for the work, regardless of cost, and are now in excellent condition, for absolute sale. On view two days prior.

TO TIMBER MERCHANTS, BUILDERS, CABINET and PIANOFORTE MAKERS, AND OTHERS.

THOMAS ROBERTS & CO. will SELL by AUCTION the third portion of the STOCK of Messrs Ward & Son, on the PREMISES in Bridgeway New road, near the Archway Tavern, N. on WEDNESDAY next, FEBRUARY 17, at ELEVEN for TWELVE punctually in consequence of the Premises being let and required to Immediately. Teak Wharf, Gravel-lane, Pimlico, S.E. The portion to be sold includes dry wainscot and Honduras mahogany in log, plank, and board, some wide counter tops, American walnut and birch, yellow and white deals, planks and battens, spruce deals, prepared flooring and matched boarding, lime, sycamore, cherry, pear, bird's-eye walnut, oak, ash, beech, and all kinds of English timber in the round, plank, and boards. On view day prior, and Catalogues had on the Premises; and of the Auctioneers, 9, Billiter-street, Leadenhall-street, E.C.

TEDDINGTON and HAMPTON-WICK, Middlesex.—Valuable FREEHOLD BUILDING LAND, tithe free, exonerated from the Land-tax, and arranged in plots forming suitable sites for the erection of villa and other suburban residences.

MESSRS. DRIVER & CO. will SELL by AUCTION, at the MART, near the Bank of England, on FRIDAY, MARCH 4th, at ONE o'clock precisely, 41 lots of valuable FREEHOLD BUILDING LAND, well situate between the picturesque villages of Teddington and Hampton wick, near the towns of Kingston, Bushy Park, the river Thames, Hampton Court, and other attractive features of this favourite residential district. The property is within forty minutes' ride of London, being close to the Hampton-wick station on the Kingston branch of the South-Western Railway, and only a short distance from the Teddington station.—Particulars, with plans, may be had at the railway-stations in the neighbourhood; at the Auction Mart, London; of Messrs. TERRELL & CHAMBERLAIN, Solicitors, 30, Basinghall-street, City; and of Messrs. DRIVER & CO. Surveyors, Land Agents, and Auctioneers, 4, Whitehall, S.W.

WEST LONDON EXTENSION.—TO BUILDERS and OTHERS.—OLD BUILDING MATERIAL.

GEO. TODD is instructed to SELL by AUCTION, on THURSDAY next, FEBRUARY 18th, at TWELVE for ONE o'clock, in lots, the remaining portion of the old BUILDING MATERIAL of the Manor House adjoining the Batter sea Railway Station, consisting of good sound bricks, rafters, principals, doors, frames, heads, sills, stone pitching, iron and plain tiles.—May be viewed the day prior and morning of sale, and catalogues had of — SIMPSON, Esq. 13, Wellington-street, London-bridge; or at the Auctioneer's Office, Battersea-bridge-road, Battersea Park, S.W.

HELD AT A PEPPERCORN RENT.—A commanding Corner Upholstery Shop and Premises, with handsome double plate glass Front, Stabling, &c. occupying an excellent Business Position, being No. 705, Old Kent-road, let at £70 per Annum Rent of Half a Term, 60 Years; free of Ground-rent. Also that valuable Engineer's Factory, the "East London Iron Works," Shenton-street Old Kent road, comprising Three Floors, Clerk's Office and private Room, Counting-house, three-stall Stable, Cart Shed, and separate Cart Entrance, and Manager's Residence; the whole let to a yearly Tenant at the inadequate Rent of 70l. per Annum: worth 84l.; Term, 60 Years; at the nominal Ground rent of 6l.

MESSRS. TEBB, BROTHERS, will SELL the above at the AUCTION MART on WEDNESDAY, FEBRUARY 17th, at ONE o'clock. Particulars at the Auction Mart and Auctioneers', 11, Kingsland-road, and 3, Adelaide-place, London-bridge, E.C.

NEW BARNET, HERTS.—Valuable Freehold Building Land.

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the MART, London, on MONDAY, FEBRUARY 15th, 1864, at TWELVE for ONE o'clock, Thirty-one Lots of Eligible FREEHOLD BUILDING LAND, land-tax redeemed, situate at Hill-side, and in the Richmond-road East, within a few minutes' walk of the Barnet Station, on the Great Northern Railway, and commanding extensive and beautiful views of the surrounding country. The Metropolitan Railway brings the property within half-an-hour's ride of the city, and makes it very desirable for persons having to reside a short distance from town. Nine-tenths of the purchase-money may remain on mortgage or contract, at 5 per cent. to be paid in nine years, by half-yearly instalments; but the whole or any part of the balance may be paid off at any time without notice. Particulars, plans, and conditions of sale may be obtained at the Railway Hotel and Railway Tavern, New Barnet; of Messrs. RUSSELL & DAVIES, No. 26, Coleman-street, E.C.; of the Auctioneer, 14, Moorgate-street, E.C.; of the Foreman on the Estate; and at the Place of Sale.

WANDSWORTH-COMMON, SURREY. -Eligible Freehold Building Land

MR. WHITTINGHAM is instructed to SELL by AUCTION, at the MART, on MONDAY, 15th of FEBRUARY, at TWELVE for ONE o'clock, 46 lots, the third portion of the Eligible FREEHOLD BUILDING LAND, free from tithe and land tax, situate on the roads leading to Wandsworth, Tooting, and Clapham, close to Wandsworth-common, and within a short distance of the Wandsworth, Clapham Junction, and Balham Stations, on the South-Western, Victoria, Crystal Palace, and Kensington Railways. The corner lot, at the junction of the high road from Wandsworth and Clapham to Tooting, is most eligible for the erection of a Tavern. Nine tenths of the purchase money may remain on mortgage or contract at 5 per cent. to be paid in nine years, by half-yearly instalments; but the whole, or any part of the balance, may be paid off at any time without notice.—Particulars, plans, and conditions of sale may be obtained (ten days before the sale) at the principal Inns in the neighbourhood; of Messrs. RUSSELL & DAVIES, 26, Coleman street, London, E.C.; of the Foreman, on the Estate; of the Auctioneer, 14, Moorgate street, London, E.C.; and at the Place of Sale.

BILLING'S PATENTS.—CHIMNEY

TERMINALS.—THROAT VALVES.—NOTICE to ARCHITECTS.—The Proprietors of these PATENTS have given the Widow an Interest in the same, and have considerably reduced the prices of the Articles, trusting that by so doing these useful Inventions may be introduced more generally in all new buildings.—For prices, apply to the Manager, Mr. TYLER, 19, Abingdon-street, Westminster, who will also affort any information, he having been for many years engaged with the late Mr. BILLING, in the practical curing of Smoky Chimneys.

NOTICE.

BROWN & GREEN'S KITCHEN RANGE

WAREHOUSE is now REMOVED to the NEW PREMISES, 72—74, Bishopsgate-street Within, a few doors from the late Address, at No. 81. These afford accommodation for a still larger stock of their Patent Prize Medal Ranges and Stoves, Register Grates, and Cooking Utensils, to meet the great public demand; and also for the consequent more extensive execution, by the manufacturers themselves, of all descriptions of hot water, bath, laundry, and steam work.

72—74, Bishopsgate-street Within, November, 1863.

TO the Right Hon. the LORD MAYOR, ALDERMEN, and COMMON COUNCIL of the CITY of LONDON

My LORD AND GENTLEMEN,—

Understanding that the Honourable the Corporation of the City of London has determined to Elect an Architect and Surveyor to the Appointment held by the late Mr. Bunning, I beg most respectfully to offer myself as a Candidate for the Office. I trust to forward in the course of a day or two, such professional testimonials as will fully entitle me to solicit your Vote and Interest.

I would add that I am a Freeman and Citizen, and that for eighteen years I have been in the active practice of the professional duties of an Architect and Surveyor, and having previously been regularly educated for, and having studied my profession, both in the offices of regular practitioners, and while improving my taste and knowledge by travel and study, both at home and abroad. Among other works I have designed and executed are the British and Irish Magnetic Telegraph Company's Office, in Threadneedle-street; the Sovereign Assurance Office, in Piccadilly; the Royal Surrey Music Hall; Messrs. Marshall & Snelgrove's premises, Oxford-street; Messrs. Hyam & Co's premises, Oxford-street; several of the new warehouses in the neighbourhood of Cannon street and St. Paul's Churchyard, including a fireproof warehouse for Messrs. Cook, Son, & Co. in addition to many public and private buildings in the country, such as Cardiff Town Hall, Caversham Park, church and school buildings, gentlemen's seats, and mercantile and commercial edifices. I have also been extensively engaged in the survey, valuation, and management of property for the various purposes of purchase, sale, loan, improvement, and preservation, and am well versed in the Lands Clauses Consolidation Act, and accustomed to the assessment of city and parish property. I would only refer at present to such estates as the Tufnell Park Estate; the Duke of Buckingham and the Barnard Estate, Bethnal-green; besides others in and near London.

I am, my Lord and Gentlemen, your obedient Servant,
HORACE JONES.

16, Furnival's-inn, E.C. February 17, 1864.

TO ARCHITECTS. — Notice is hereby

given, that the Trustees appointed by Sir John Soane will meet at the Museum, No. 13, Lincoln's-inn-fields, on THURSDAY, the 24th of MARCH, at 3 PRECISE o'clock in the afternoon precisely, to DISTRIBUTE the DIVIDENDS which shall have accrued during the preceding year, from the sum of 5,000l. Reduced 3l per Cent. Bank Annuities, invested by the late Sir John Soane, among distressed architects, and the widow and children of deceased architects left in destitute or else needy circumstances. Forms of application may be had at the Museum, and must be delivered there on or before TUESDAY, the 15th of MARCH, after which day no application can be received.

COMPETITIONS.

FIFTY POUNDS PRIZE for Improved

VERMIN TRAP.—The Committee of the Royal Society for the Prevention of Cruelty to Animals offer a Prize of 50l. for a TRAP, which shall either, without inflicting torture, secure vermin alive, or instantaneously destroy them. The intention must be simple, inexpensive, certain and fit for use in game preserves. The Committee, assisted by such gentlemen will be the judges, and the reward will be given to the first man, provided in their judgment it is efficient for the purpose required.—For further particulars, apply to

12, Pall-Mall S.W. JOHN COLAM, Secretary.

P.S.—Several country gentlemen and masters of hounds have contributed in support of the above project. Suggestions from sportsmen and game preservers are earnestly desired.

CONTRACTS.

MANCHESTER CEMETERY COMPETITION.

—The Cemetery Committee having decided to EXHIBIT only the SELECTED DESIGNS, three of the Authors of the remaining ones purpose to SUBMIT their's to the INSPECTION of the PUBLIC, and will be obliged to other gentlemen if they will join them.—Address, R. H. D. Office of "The Builder."

TO BUILDERS.—An Ornamental Builder

is required to ALTER and IMPROVE a Licensed Place of Public Resort. Any tradesman willing to accommodate the Advertiser by taking a fraction of the cost down, and accepting security for a weekly payment in future may address R. R. R. care of Mr. Wastie, Chemist, Kensington-cross.

ST. PANCRAS, MIDDLESEX.—To CON-

TRACTORS and OTHERS.—Notice is hereby given, that the Highways, Sewers, and Public Works Committee of the Vestry of the Parish of St. Pancras will meet at the Office of the Department of Works on MONDAY, the 29th day of FEBRUARY, 1864, at SIX o'clock p.m. to receive TENDERS from persons willing to CONTRACT

For SUPPLYING GUERNSEY, MARKFIELD, GROBY, and MOUNT SORRELL GRANITES;

For SUPPLYING FLINTS, GRAVEL, and other ROADWAY MATERIALS; and for CARTAGE;

agreeably to the terms of specification to be seen at the said Office daily (Saturday excepted). Sureties will be required for the due performance of each Contract.—Further particulars, with forms of tenders, may be obtained, on the payment of 1l. for each contract, at the Office of Mr. WILLIAM BOOTH SCOTT, Chief Surveyor, as under. The Vestry do not bind themselves to accept the lowest or any Tender. No Tender will be received or accepted unless made out on one of the printed forms. Tenders must be delivered by SIX o'clock p.m. on the said MONDAY, 29th FEBRUARY, 1864.—By order,

CHARLES WORRELL,
Chief Clerk of the Department of Works.

10, Edward-street, Hampstead-road, February, 1864.

TO BUILDERS.—Plans and Specifications for an HOTEL to be ERECTED at Alum Bay, Freshwater, Isle of Wight, may be seen at my Office after ELEVEN o'clock on TUESDAY, the 1st of MARCH. Tenders to be delivered on or before the 7th of March. The lowest or any Tender not necessarily accepted.—FREKE, Architect, 22, Bennett's-street, Covent Garden, London.

TO ROADMAKERS, &c.—The Board of Works for the Fulham District hereby give notice, that they will be prepared to receive at their meeting to be held at Broadway House, Hammersmith, on WEDNESDAY, the 24th day of FEBRUARY, 1864, to receive TENDERS for MAKING the CARRIAGEWAY and PART of the FOOTWAYS of Munbro' road North, in the Parish of Hammersmith, in accordance with a specification of particulars, which may be seen at Broadway House, any day from TEN am to FOUR p.m. up to the day prior to receiving the Tenders. The Tenders to be delivered at or before TEN o'clock in the forenoon of the day before mentioned, addressed to the Chairman of the Board, and endorsed "Tender for Munbro' road North."—The Board does not pledge itself to accept the lowest or any Tender.—By order,

W. LOVELY, Clerk.

TO BUILDERS.—TENDERS are required by the 29th of FEBRUARY, for the ERECTION of THREE SMALL HOUSES and SHOPS, at Anerley. The drawings, specification, &c. may be seen at the Surveyor's Office, J. JOHNSON, 22, Buckingham-street, Strand.—The lowest or any Tender will not necessarily be accepted.

TO BUILDERS. — Persons desirous of CONTRACTING for the ERECTION of a BAPTIST CHAPEL, at Bormor, Herts, may inspect the drawings, specifications, &c. at the Residence of the Rev. H. LEONARD, Beech Down, Bormor, on MONDAY, FEBRUARY 15th, until SATURDAY, MARCH 5th, on which day the Tenders are to be delivered to the Rev. H. LEONARD, before ONE o'clock p.m. The Committee do not bind themselves to accept the lowest or any Tender.

NEAR DORKING.—Builders desirous of CONTRACTING for the ERECTION of a COTTAGE RESIDENCE, at Abinger, near Dorking, may see the plans and specifications, at Mr. F. S. CARY's, Abinger, on Monday, the 22nd inst. to the 4th of MARCH. Sealed Tenders to be delivered on the 5th of MARCH, to Mr. F. S. CARY, 21, Bloomsbury-street. The lowest or any Tender not necessarily accepted.

GLOUCESTERSHIRE.—To BUILDERS. COUNTY POLICE STATION.—The Magistrates for the County of Gloucester are willing to receive TENDERS for the ERECTION of a POLICE STATION and PETTY SESSIONAL COURT at TURSLEY. Persons desirous of Contracting for the Works may see the drawings and specification, and obtain forms of Tender and any further information after the 15th inst. by application at the Offices of Mr. J. MEDLAND, County Surveyor, Clarence street, Gloucester. Tenders sealed and marked "Tenders for Police Station, Dursley," to be sent in addressed to the Clerk of the Peace, Shire Hall, Gloucester, on or before SATURDAY, the 12th of MARCH next. The lowest or any Tender will not necessarily be accepted.

Clarence-street, Gloucester, 10th Feb. 1864.

UXBRIDGE DISTRICT LOCAL BOARD of HEALTH.—To WELL SINKERS.—The Local Board of Health for the district of Uxbridge are prepared to receive TENDERS from persons willing to CONTRACT for SINKING a WELL, 92 feet deep by 7 feet in diameter, and to perform other Works in connexion therewith, at their Pumping-yard, Waterloo road, Uxbridge. The plans and specification can be seen at the Office of Mr GEORGE EVES, High-street, Uxbridge, between the hours of NINE am and FOUR p.m. Sealed Tenders, endorsed "Tender for Well," are to be sent in addressed to the Local Board of Health, Uxbridge, on or before SIX o'clock of THURSDAY the 3rd day of MARCH, 1864. The Local Board do not bind themselves to accept the lowest or any Tender. By order of the Board,

CHARLES WOODBRIDGE, Clerk.

February 18th, 1864.

ST. OLAVE'S UNION.—To BUILDERS. The Guardians will meet at the Workhouse, in Parish-street, Horsely-down, on THURSDAY, the 3rd day of MARCH next, at THREE o'clock in the afternoon, to receive TENDERS from Builders who may be willing to PERFORM certain ALTERATIONS at the said WORKHOUSE. The party Tendering must be in attendance at the above-named hour and must be prepared to enter into a bond with at least one responsible surety, in the sum of proper performance of the works. The drawings and specification of the works may be seen, and further particulars obtained at the Offices of Messrs. NEWMAN & BIDEN, Architects, 125, Tooley-street, between the hours of TEN and FOUR o'clock. The Guardians do not bind themselves to accept the lowest or any Tender.—By order of the Board,

CHAS. WELLBORNE, Clerk to the Guardians.

17, Duke-street, London Bridge, S.E. February 15, 1864.

TO BUILDERS.—TENDERS are required for the ERECTION of TWO PAIRS of SEMI-DETACHED VILLA RESIDENCES, at Honeysuckle, Kent. Particulars will be forwarded, on application to Mr. J. W. REED, Architect and Surveyor, Lombard-street, Hornsey rise, Middlesex.—Application to be made not later than the 24th inst. The lowest or any Tender not necessarily accepted.

TO MASONS, PAVIORS, and OTHERS. The Vestry of the Parish of St. George in the East will meet at the Vestry Hall, on THURSDAY, the 3rd day of FEBRUARY, at 12 o'clock, to receive TENDERS for the SUPPLY of PAVIORS' MATERIALS and the EXECUTION of the Jobbing and Measured Works required for the REPAIRING and RELAYING the CARRIAGE and FOOTWAYS of the said Parish, for the term of one year, or for three years from the 25th March next, as the Vestry may then determine. Specifications and forms of Tender may be obtained at the Vestry Hall on payment of 5s. which sum will be returned the day after the receipt of such Tender. Any Tender not upon the printed form of the Vestry will be rejected. The security of two responsible persons will be required, but the expense of the bond and contract will be borne by the Vestry. The Vestry do not bind themselves to accept the lowest or any Tender.

W. L. HOWELL, Vestry Clerk.

Vestry Hall, Back-road, 11th February, 1864.

TO ENGINEERS and OTHERS.—The Visiting Justices of the Gaol of the Borough of Stamford are desirous of HEATING TWENTY CELLS in the Gaol with HOT WATER. Parties are invited to TENDER for the WORK, and to supply a plan and particulars of the apparatus, &c. with which they propose to carry out the desired object. Mr JAMES RICHARDSON, the Borough Surveyor, will, on application, show the gaol. The Magistrates will meet on SATURDAY, MARCH 5, 1864, at ELEVEN a.m. to receive Tenders and plans. They will not be pledged to accept the lowest or any Tender.—By order,

JOS PHILLIPS, Jun. Clerk to the Magistrates.

Town Hall, Stamford.

TO BUILDERS, &c.—Persons desirous of CONTRACTING for the ERECTION of the RECTORY HOUSE, at Staple, near Wickham Castle-down, Kent, can apply by letter only, for further particulars, to the Architect, Mr. HARRY R. NEWTON, 6, Angel-street, Regent-street, London, W.

TO BUILDERS, CONTRACTORS, and OTHERS.—TENDERS are required for BUILDING FOUR HOUSES, in Lawn terrace, Blackheath, the drawings and specifications for which can be seen at the Office of Mr. F. F. THORNE, Architect, No. 4, Corbet-court, Gracechurch street, London. The Tenders are to be delivered at the Architect's Office, at TWELVE o'clock on MONDAY, 7th MARCH next. The lowest or any other Tender will not be necessarily accepted. Quantities supplied.

February 18, 1864

CONTRACT for the SUPPLY of BUILDING MATERIALS for CONVICT PRISONS.—Persons desirous of TENDERING for the SUPPLY of TIMBER, DEALS, SLATES, LIME, IRON, BRICKS, LEAD, GLASS, IRONMONGERY, and CAST IRON, IRONMONGERY, GAS and WATER PIPES, WHITE LEAD, OILS &c. for Twelve months from the 1st of April next to the 31st of March, 1865, for the Pentonville, Millbank, Brixton, Portland, Portsmouth, Chatham, Parkhurst, Dartmoor, Woking, and the Refuge at Fulham, are requested to forward their Tenders, prepaid, addressed "The Directors of Convict Prisons, 45, Parliament-street, Westminster, S.W." on or before SATURDAY, MARCH 12th, 1864, at NOON. Forms of Tender will be supplied on application at the several Prisons before named, & at the Office of the Directors, 45, Parliament-street, on and after TUESDAY, the 1st of MARCH, 1864.

45, Parliament-street, 16th February, 1864.

TO CONTRACTORS and BUILDERS.—Borough of Kingston-upon-Thames.—DRAINAGE WORKS.—The corporation of the borough of Kingston upon Thames having adopted a plan for draining the whole of the borough, comprising about 18 MILES of BRICK SEWERS and PIPE DRAINS, are desirous of receiving TENDERS for carrying out the works. A full specification, together with plans and sections, may be inspected at the Town Clerk's Office, Church-street, Kingston upon-Thames, where all other particulars may also be obtained any day after THURSDAY, the 25th inst., between the hours of TEN a.m. and FOUR p.m.—All Tenders to be sent in sealed to the Town Clerk's Office, marked "Tender for Drainage Works," on or before the 16th day of MARCH next. The Works proposed to be executed are intended to be commenced forthwith.—The Corporation do not bind themselves to accept the lowest or any Tender.—By order,

WALTER M. WILKINSON, Town Clerk.

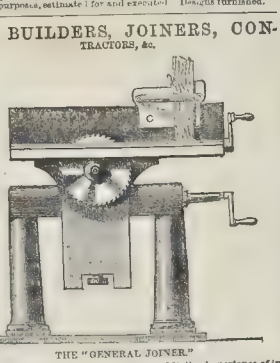
Dated 20th February, 1864.

TO BUILDERS.—The time for sending in TENDERS for the ERECTION of four HOUSES in Fleet-street, TORQUAY, is extended till MARCH 7th. A copy of the Drawings and Specifications may be seen and quantities obtained at the office of Mr. F. CHADWICK, Surveyor, 5, Church-court, Clement's lane, London, E.C.

EDWARD APPLETON, F.I.B.A. Architect.

Torquay, February 16th, 1864.

COOMBS & McCALL, Dover Iron Works, Staple-street, Long-lane, Borough, S.E. (late H. G. COOMBS 17, Union-street, and 85½, Great Guildford-street, Borough, S.E. inventor of the Rotary Ship Pump, Patentee of the Tubular Railings, new Compensating Mirror Truss, &c. &c.)



GENERAL IRON FOUNDERS, MERCHANTS, and PATTERN MAKERS.

COLUMNS, GIRDERS, BOOMS, | TANKS, DOORS, RAILINGS, | STAIRCASES, MACHINE-CASTINGS,

And every description of Ironwork, wrought or cast for Builders' or other purposes, estimates for and executed. Designs furnished.

TO BUILDERS, JOINERS, CONTRACTORS, &c.

THE "GENERAL JOINER."

SAMUEL WORSSAM & CO. having long felt the importance of introducing a LABOUR-SAVING MACHINE, which by combining several operations at a moderate cost, should meet the requirements of builders and others engaged in the conversion of timber, beg to offer for this purpose their "General Joiner" as above, which in its present greatly improved form will, with 2 horse power, do the work of at least fifteen skilled joiners, in SAWING, CROSS-CUTTING and SQUARING, PLANING and THICKNESSING, MORTISING, TENONING, GROOVING, TONGUEING, RABBETING, BORING, BEADING, MOULDING, CHAMFERING, &c. &c.—For priced illustrated circulars, apply to S. WORSSAM & CO. Saw-Mill Engineers, King's-road, Chelsea (sole manufacturers), where the "General Joiner," and samples of the work may be seen.

INDIA-RUBBER MILL BANDS, WASHERS for STEAM JOINTS, HOSE PIPES, and FLEXIBLE TUBING

A STOCK OF THE ABOVE ALWAYS ON HAND.

JAMES LYNE HANCOCK,

VULCANIZED INDIA RUBBER WORKS, GOSWELL MEWS, GOSWELL ROAD (opposite Spencer-street), LONDON, E.C.

BUNNETT & CO.

PRIZE MEDAL, GREAT EXHIBITION,

FOR

REVOLVING IRON SHUTTERS.

No. 1.—Patent, Bank Quality, with best Worm and Wheel Gearing, 6*s.* per foot.

No. 2.—Patent, for Shops and Offices, with best Chain Gearing, 5*s.* per foot.

No. 3.—Patent, for Private Houses, without Gearing, raised and lowered with Balance Weights, 3*s.* 6*d.* per foot.

BUNNETT & CO. invite the attention of Architects and Builders to their recent Improvements in LIGHT REVOLVING IRON SHUTTERS for the WINDOWS of PRIVATE HOUSES, raised and lowered with graduated balance weights, without any gearing.

A matured experience, extending over twenty-five years, has convinced the Patentees that *no permanent dependence can be placed in any other*

SYSTEM OF

SELF-COILING SHUTTERS.

BUNNETT & CO.'s

Widely-known and well-appreciated

BANK SHUTTER

requires no comment, as it is in use in a large majority of the Banking Establishments, Goldsmiths' Shops, and Public Offices of the United Kingdom and the British Colonies; but the Patentees wish to make it known that they have recently completed extensive Additions to their

WORKS AT DEPTFORD,

and have erected new and most powerful Machinery with the view of meeting the largely-increasing demand for the

REVOLVING IRON SHUTTER,

With all necessary Despatch.

LONDON OFFICE,
17, QUEEN STREET, CITY;
GLASGOW OFFICE,
199, BUCHANAN STREET.

THE GREAT FIRE IN THE CITY.—"A closer examination yesterday of the track of the recent fire in Wood-street, shows in a striking manner how much it was confined to a class of buildings the interior arrangements and means of communication of which appear to have been made in defiance or ignorance of the principles which now regulate such matters, under the operation of the Metropolitan Building Act. The warehouses and offices which have perished seem to have been separated from each other by thin lath and plaster partitions for the most part, and only in one instance was there an iron door between one part of the interior of the same building and another, such as is now commonly used and made imperative, indeed, in the construction of warehouses, as an invaluable means of shutting off communication in case of fire. That iron door, too, which remains uninjured, would have been completely effectual in arresting the flames in that direction, had they not penetrated by a vulnerable point into the part of the building which it protected.

THE USE OF IRON FOR SAFETY AGAINST FIRE was most conclusively proved by a very remarkable circumstance. The large and handsome warehouses of Messrs. J. & R. Morley, situate at the corner of Gresham and Wood Streets, overlooked by a large window on the ground floor at the back the little court in which the fire originated, and to which it was at first confined.

THIS LARGE WINDOW WAS PROTECTED ON THE OUTSIDE BY A REVOLVING IRON SHUTTER, AND THAT MORE AGAINST ROBBERY THAN FIRE.

On this occasion for some time the flames played fiercely, but harmlessly, about the outside of the window so guarded by the iron shutter. Had they once entered Messrs. Morley's premises at that point, the stock stored inside, and estimated at from 250,000*l.* to 300,000*l.*, would inevitably have been destroyed, if, indeed, the devastation would have ended in that one vast pile of buildings. Upon such a slender condition of safety did property almost fabulous in value, and belonging to a single firm, depend in this case."—*Times*, 22nd December, 1863.

THE REVOLVING IRON SHUTTER THAT ARRESTED THIS FIRE WAS MANUFACTURED IN 1849, BY

BUNNETT & CO., Patentees,
London & Glasgow.

TO ARCHITECTS AND BUILDERS, RAILWAY CONTRACTORS, &c.

MANUFACTURER OF WROUGHT-IRON GIRDERS

Designed and Guaranteed as to Strength.

APPROVAL OF THE ROYAL VETERINARY COLLEGE.

THE MEDALS OF ENGLAND AND FRANCE,

And the Medals and High Recommendation of the Royal Agricultural Societies of England and Ireland.

SECURED BY EIGHT SEPARATE PATENTS. LATEST, 1863.

PATENT WROUGHT-IRON STABLE FITTINGS

SHOULD BE ADOPTED FOR THE FOLLOWING REASONS, viz.:—

That the BREAKAGES in Cast-Iron Fittings are numerous, and that one fracture from a kick, or other cause, may occasion an injury to a Horse, and involve a loss equal to the entire expense of fitting up the Stable. The fear of this has led to the use of wood, and, in the case of Cast-Iron GUTTERS, to the adoption of another and less effective mode of draining.

PATENT ENAMELLED TOP PLATE MANGER, with RACK & WATER-TROUGH,

The whole of which, except the Rack, being enamelled, can be kept as clean as a DINNER PLATE.

THE HALTER BALL, ATTACHED BY A NEW IMPROVEMENT, WORKS NOISELESSLY, AND ALMOST WITHOUT FRICTION.

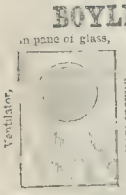
PATENT FASTENINGS FOR THE DOORS OF LOOSE BOXES.

These Catches and Hangings work easily, are self-acting, and cannot be put out of order: by their use all projections by which horses are often blemished are rendered impossible; advantages peculiarly their own.

THE PATENT HARNESS FITTINGS

Keep the Harness and Saddles in shape, and are constructed so as to admit the air getting to the underside of them when hung up, thereby insuring a quick and perfect airing from any wet or moisture.

EVERY DESCRIPTION OF STABLE FURNITURE.



ILLUSTRATED LISTS ON APPLICATION.——INSPECTION OF SHOW-ROOM REQUESTED.

BAKERS' OVEN WORK, Forge Backs and Troughs, Rain-water Pipes and Gutters, Sash-Weights, Furnace Bars, Stoves, Ranges, &c. always in stock.

CAST-IRON PIPES, IRON-WORK FOR OVENS, &c.

EXHIBITION PRIZE MEDAL, 1862, AND MEDAL OF ROYAL AGRICULTURAL SOCIETIES OF ENGLAND AND IRELAND.

MUSGRAVE'S PATENT STABLE and HARNESS FITTINGS.

MUSGRAVE'S PATENT HARMLESS LOOSE BOXES.

MUSGRAVE'S PATENT IRON COW STALLS and PIGGERIES.

Architects who have not seen these fittings are requested to write for engravings, as they are unlike those of any other maker, and were admitted to excel all the work of their class in the Exhibition.

They can be seen in first-class stables in almost every county in England; and MUSGRAVE, BROTHERS, are now fitting several very large establishments under direction of London architects, noted for employing only what is the best of its kind.

Musgrave's Patent Slow-combustion Stove

Is the nearest approach to Warming by Hot Water. It will burn in churches from Saturday till Sunday evening, without attention during the hours of worship. In halls will burn day and night for weeks, with little care. Capable of warming a large apartment for twenty-four hours, at a cost of 2d.; and deserving of special attention because of its safety, healthfulness, durability, and extreme simplicity.—For full particulars apply to

MUSGRAVE, BROTHERS, Ann-street Ironworks, Belfast.

THE PRIZE MEDALS

(LONDON, 1851. PARIS, 1855. LONDON, 1862)

Awarded to

COTTAM & COMPANY,

2, WINSLEY STREET, LONDON, W.

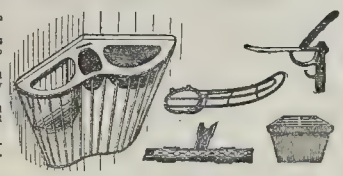
For progressive and general improvements in

STABLE FITTINGS AND HARNESS BRACKETS.

Awarded a prize at the Paris Exhibition,

Patronized by the English and French Governments, as well as by the principal Nobility, Gentry, and Hunting Establishments in the Kingdom.

In use at her Majesty's Stables, Aldershott and Balmoral.



COTTAM & COMPANY, Winsley-street, W. are the original Inventors of the PATENT ENAMELLED MANGER, Watertrough, and Wrought-iron Rack, united to an Iron top-plate, and forming one complete and useful fixture, having COTTAM'S Patent Noiseless Hitter Guard and Collar Rein attached, which is taken to pieces for filling in oats, and works with ease and freedom up or down the guide bar.

COTTAM'S NEW PATENT SEED-BOX, an important addition to the above fittings, being simple in construction, light, and durable, prevents feed waste, and is economical in its results.

COTTAM'S PATENT PERMANENT ATTACHED DROP COVER, for the above, is a most essential addition to their fittings; it is never in the way; can be placed and replaced in an instant, while its cheapness, simplicity, and utility in keeping the contents of the troughs clean, and regulating the quantity to be taken, is quite sufficient to insure its use.

COTTAM'S PATENT SADDLE AND HARNESS BRACKET COMBINED

can be used with great advantage where space is an object, as it can be turned up out of the way when not in use.

COTTAM'S IMPROVED WROUGHT-IRON VENTILATING BRACKET preserves the shape and allows a free admission of air to the under parts of the saddle.

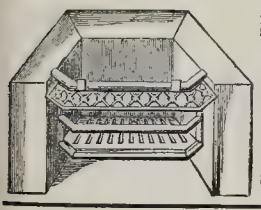
COTTAM'S IMPROVED SURFACE GUTTER, with perforated moveable cover, the use of which prevents accidents, and can be easily cleaned out.

COTTAM'S CAST-IRON SANITARY TRAP, from its improved construction, gives a full water passage, and does not allow any smell to ascend from the drain.

PATENT LOOSE-BOX FITTINGS, and every article for the harness-room and stable, kept in stock, plain, galvanised, and enamelled. Iron gates, fencing, hurdles, &c.

Illustrated Catalogues and Estimates gratis, upon application to

COTTAM & CO. 2, WINSLEY STREET, Oxford Street, London, W.



WHERE FULL-SIZED STALLS, LOOSE BOXES, AND HARNESS-ROOM, &c. ARE FITTED UP, SHOWING ALL COTTAM'S PATENT IMPROVEMENTS, &c.

EDWARDS & SON,

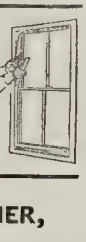
STOVE GRATE & KITCHEN RANGE MANUFACTURERS,

No. 49, GREAT MARLBOROUGH STREET, REGENT STREET, LONDON.

J. GURMAN,

Inventor and Patentee of a New SASH POCKET and Fittings,

For Weight and Balance Sashes, for Cleaning, Re-hanging, or Painting Windows.



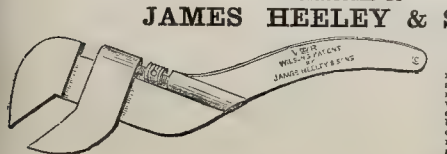
They can be taken out in a minute, and replaced in same time. Old Windows can be altered.

Any person allowed to work the Patent, on purchasing the Patent Pocket and other Fittings of the PATENTEE, 4, ONSLOW ROAD, Southampton; or of Mr. G. BRADBURY, 11, GARLICK HILL, Cannon-street, London, where Windows may be seen, and information obtained.

Also of the following Agents:—

LIVERPOOL—Mr. T. C. OWEN, PRINCE'S BUILDINGS, NORTH JOHN STREET.
BRISTOL—Messrs. CHILLCOTT & GARDINER, IRONMONGERS, JOHN STREET.
NEWCASTLE-ON-TYNE—Mr. T. DUNN, IRONMONGER, GRAY STREET.
EDINBURGH—Messrs. BELL & SON, IRONMONGERS, FREDERICK STREET.
BRIGHTON—Messrs. LANGWORTHY & REED, IRONMONGERS.

Windows may also be seen at the Kensington Museum, London.



BY HER MAJESTY'S ROYAL LETTERS PATENT.

WILSON'S DOUBLE-ACTION SCREW SPANNER,

MANUFACTURED BY

JAMES HEELEY & SONS,

Mount-street, Birmingham.

The superiority of this Spanner consists in its novel and rapid mode of adjustment by a double action screw, and its new and convenient arrangement of curved handle and oblique jaws, which, combined with its superior strength and excellent workmanship, render it by far the best and handiest tool of its class hitherto produced. It is being extensively used by Engineers, Manufacturers, Machinists, and Railway and Steamboat Companies, and can be had of all respectable Ironmongers.

THOMAS PUGH & CO.'S NEW PATENT ECONOMIC SELF-ADJUSTING MORTISE AND RIM LOCK FURNITURE.

NUT PLATE.

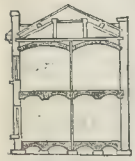
J. B. SCAMMELL & CO. (late Thomas Pugh & Co.)

WHOLESALE IRONMONGERS,

13, KING STREET, SNOW HILL, LONDON.

We invite particular attention to the PATENT LOCK FURNITURE, which we do not hesitate to say is the most perfect article now manufactured, great improvements having been recently made in it. It has been extensively used in Public and Private Buildings, in Her Majesty's Pavilion and Camp at Aldershott—where, nearly hundred sets without one single failure. It is applicable to all Locks and Latches, both Rim and Mortise, and effects a most secure fastening, without any screw in the neck of the knob. Perfect action guaranteed in both Locks and Furniture, if the Locks are of our own manufacture.

New rich Designs in Glass, China, Brass, Bronzed, Gilt, Carved Woods, Inlaid, &c. &c. or to any Design.



THIS FURNITURE MAY BE HAD WITH PLATES OR NUTS.

A most complete and extensive stock of every description of Locks, Latches, Brass Foundry, and Ironmongery, required for Buildings, of the best quality manufactured, at the lowest wholesale prices.

*** Illustrations and Particulars sent on application.

WAREHOUSES FOR NAILS, PIPES, GUTTERS, &c. IN ST. JOHN'S COURT.

THE DENNETT ARCH.

Allowed to be the cheapest fireproof construction known, and used with the greatest success for the last ten years in the Midland Counties, and has been adopted by G. G Scott, esq. for the New Foreign Offices, used in any form of arch, groin or dome, turned to any length, width, or height, forming a perfect floor and ceiling in one mass, from 24 inches in the crown to any required thickness.

Address to the Patentees,—A. & R. DENNETT & CO. NOTTINGHAM.

TESTIMONIAL. "I have made use of Messrs. Dennett & Co's material for Fireproof Arching, and though I have, happily, had no practical experience of its efficiency as against fire, I can bear witness to its strength, and its extreme convenience of application. I have made use of it in positions in which I should have found it difficult to introduce any other fireproof material, and it has this advantage, that the arches constructed of it are so entirely in one mass that they cover the space like a compact shell or inverted basin, and are, consequently, almost wholly free from lateral pressure.

"GEO. GILBERT SCOTT, 20, Spring Gardens, London."

MANTEL PIECES, ENGLISH AND FOREIGN,

IN EVERY VARIETY OF DESIGN AND COST,

Have been added to their LARGE and EXCELLENT ASSORTMENT of FINE FINISHED STOVES FENDERS, &c. in the NEW SHOW ROOMS of the

VAVASSEUR & CO.

GALVANIZED IRON AND ZINC WORKS, SUMNER STREET, SOUTHWARK, S.E.

THE PATENT UNIVERSAL CHIMNEY HEAD.

This Chimney Head has been designed for the Prevention of Smoky Chimneys and Down Draughts. The numerous side apertures are so placed as to guide the wind upwards, as it strikes the head from any quarter, thus creating a strong current, and assisting the exit of the smoke through the top. The same apertures give ready egress to the wind on all sides in case of its striking downwards from above, and thus greatly diminish the danger of its passing down the chimney.

Price in Zinc..... 24s.
Ditto, Kitchen size..... 32s.
Price in Galvanized Iron 20s.
Ditto, Kitchen size..... 30s.

A Liberal Allowance to the Trade.

Manufactured solely by

And to be obtained of all respectable Ironmongers in London and Country.

SMOKY CHIMNEYS. — The best Cure is the PATENT ALBERT CHIMNEY CAP, 250 on Buckingham Palace; in use also at St. James's Palace, Windsor Castle, Government buildings, mansions, halls, club-houses, and buildings in general. Prospectuses on receipt of two postage stamps.

JAMES BARTON,

Iron Works, 370, Oxford-street, W.

N.B. Manufactory for the Patent Stable Fittings and Enamelled Mangers.

SMOKY CHIMNEYS.

S. DEACON

Respectfully invites the attention of Architects, Builders, &c. to his

PATENT LOUVRE CHIMNEY CAP,

which has been in use some time with perfect success, many curing chimneys where other caps have been of no avail.

The advantages attending this Cap are—it can be thoroughly cleaned by the machine when the chimney is swept, the brush being able to pass through the Cap without the liability of misplacing it, an increased up current, and the impossibility of a down one.

Prospectus, with testimonials, forwarded on receipt of Postage Stamp, by

S. DEACON,

59, ALMA STREET, HOXTON, N.

Is simple in construction and certain in effect. It has a good shape, is durable, and easily swept by the sweeps' machine.

Price 30s.

Sent to all parts of the kingdom upon receipt of money order, addressed to the

PATENTEE, CAMDEN MANUFACTORY, CHISLEHURST, KENT.

FIRE-PROOF CONSTRUCTION.—

FOX & BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private. The system combines ECONOMY with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring boards, or of cement, asphalte, tile, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the Patent,

DESACHY'S FIBROUS PLASTER.

GEORGE JACKSON & SONS,
HAVING BECOME THE PROPRIETORS OF THE PATENT RIGHTS IN
DESACHY'S FIBROUS PLASTER,
Beg to call the attention of Architects to its Capabilities.

It is adapted for the speedy and economical production of any coffered or circular work, waggon-headed ceilings (all bracketing being avoided, as it is fixed to the joists direct), fluted and plain columns, panelled dados, all kinds of diaper, &c.; for the linings of walls and ceilings, and for all purposes of ornamental plaster.

The advantages are great. It is of great lightness and of excellent quality; it is not inflammable, and is ready to be painted immediately after it is made; it has been used (under the direction of Owen Jones, esq.) for the ceiling of St. James's Hall; at Messrs. Osler's, Oxford-street; Mr. Hancock's, New Bond-street; the Crystal Palace Bazaar; the Home for the Aged, South Lambeth; and at various other Works.

IMPORTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.

VIEILLE MONTAGNE ROOFING ZINC.

Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.
JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere

ADULTERATIONS. Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent. Without [illegible] under the name of "Improved Zinc Paint," or as the Number Two or Three qualities, no workman can produce good work with [illegible]. Whilst we do not [illegible] the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THE PROGRESS of the ART of BUILDING, and a Sure Remedy for Smoky Chimneys.
Edinburgh: WILLIAM P. NIMMO. London: SIMPKIN, MARSHALL, & CO.; and HOULSTON & WRIGHT; and all Booksellers.

Now ready, New Edition, for 1864, with the new Peers, &c.
CAPTAIN DOD'S PEERAGE, BARONETAGE, KNIGHTAGE, &c. for 1864 (Twenty-fourth year), containing all the new Peers, Baronets, Knights, Bishops, Privy Councillors, Judges, &c. corrected throughout on the highest authority.
WHITTAKER & CO. Ave Maria-lane, and all Booksellers.

LORD ST. LEONARDS'S HANDY BOOK on PROPERTY LAW. The Seventh Edition. To which is now added A Letter on the New Laws for obtaining an Indefeasible Title. With a Portrait of the Author, Engraved by Holl. Price 5s. 6d.
WILLIAM BLACKWOOD & SONS, Edinburgh and London.

"A work of reference, such as is needed in every industrial establishment."—*The Times.*
In fcp. half-bound, 7s. 6d.
A DICTIONARY of TRADE PRODUCTS, COMMERCIAL, MANUFACTURING, and TECHNICAL TERMS, with a Definition of the Moneys, Weights, and Measures of all Countries. Reduced to the British Standard.
By P. L. SIMMONDS, F.R.G.S. F.S.S.
A new edition, revised and enlarged.
ROUTLEDGE, WARNE, & ROUTLEDGE, Broadway, Ludgate-hill.

HOW CAN TOWN SEWAGE BE BEST PRESERVED AND UTILIZED? With sheet of Illustrations. By JAMES EDMESTON, Architect. Price 6d.
JOHN WEALE & CO. 59, High Holborn.

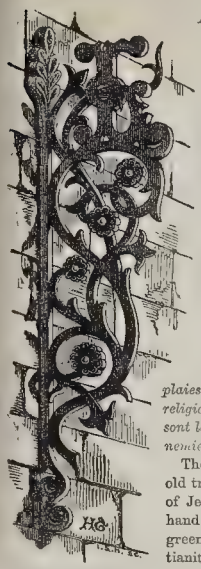
ARCHITECTURAL BOOKS, ILLUSTRATED BOOKS, and COLLECTIONS of BOOKS and PRINTS of all kinds, bought for cash, and the full value given, by JAMES KINEIL, Book and Printseller, 490, Oxford-street, London, W.

NO SHUTTER BARS.

JENNINGS'S SHOP-SHUTTER SHOE.
SHOP SHUTTERS are SHOD and SECURED by the above, at HALF THE COST OF THE UNSIGHTLY AND DESTRUCTIVE SHUTTER BAR. Shops referred to in every public street in London. When ordering the above, send FINISHED THICKNESS of Shutters, and the way they go up.
Sold by all Ironmongers, and the Inventor,
GEORGE JENNINGS,
Engineering Depot, Palace Wharf, Stangate, Lambeth, S.

CARTS, LADDERS, BARROWS, &c.—GEORGE ELL & CO. Builders of Carts, Vans, Waggons, Trucks and Manufacturers of Implements for Railways, Town use, Agriculture, and Exportation.
LADDERS, BARROWS, TRESTLES, STEPS, PORTABLE SCAFFOLDS,
and every description of Contractors', Builders', and Decorators' Trade Requisites.
Vans, Waggons, Dobbin and other Carts, specially adapted for Exportation. Pug-mills, Jack-rolls, Trolleys, and Portable Railways. Scaffolding, Ladders, Barrows, Trestles, Steps, &c. Lent on Hire.
Price Lists on application.
GEORGE ELL & CO.
ON WORKS, 366 and 368, EUSTON ROAD, LONDON, N.W.

PRIZE WAGGONS and CARTS.—HAYES & SON,
Manufacturers to Her Majesty's Board of Ordnance, and all the principal Railways in the Kingdom,
Coach and Cart Wheelwrights, Spring Van and Waggon Builders, Timber Merchants, Contractors, &c.
Manufacturers of Carts, Vans, Waggons, Trucks, and Implements for all Railways, Town use, Agriculture, and Exportation.
Contractors' and Builders' Dobbin and other Carts, Barrows; Navvy, Excavatow, Crowning, and Off-bearing ditto, on the shortest notice and of the best materials; &c.
HAYES & SON,
SCOTGATE WORKS, STAMFORD.



TO BE SOLD, an excellent VINERY, nearly new, 30 feet by 18 feet within. Heating-apparatus consists of wrought-iron saddle boiler, with cast-iron front and supply cistern, having 28 feet of 2 inch and about 300 feet of 4-inch cast-iron piping (54 feet of the latter having troughs cast on for producing moisture), also two 3-inch stop-valves to regulate the heat; the whole fitted up on the most approved principle. — For price, &c. apply to GEO. RYDER & CO. Engineers, &c. Churchgate, Leicester.

HARRISON & ROBINSON, MANUFACTURERS, by MACHINERY, of every description of
WOOD MOULDINGS, DOORS, SASHES and FRAMES, SKIRTINGS, SPOUTS, &c. &c.
SMITHIES JOINERY WORKS, Barnsley.

The Builder.

VOL. XXII.—No. 1098.

*Water Supply and Sewerage for Jerusalem.**

A religion Juive, says Montesquieu, "*est un vieux tronc qui a produit deux branches qui ont couvert toute la terre, c'est-à-dire le Christianisme et le Mahométisme. Elle se sert de l'un et de l'autre pour embrasser le monde entier, tandis que d'un autre côté sa vieillesse vénerable embrasse tous les temps. C'est une mère qui a engendré deux filles qui l'ont accablée de mille plaies; car, en fait de la religion, les plus proches sont les plus grandes ennemies.*"

The sacred soil of this old tree is the Holy City of Jerusalem: its right-hand branch is the ever-green bough of Christianity; its dead branch the decaying creed of Mahomet. Christianity, Judaism, and Mahometanism thus meet face to face in what is a Holy City to all three creeds. It is a painful thing to witness the figure made in the Holy City by the adherents of the true faith. It will be remembered that, last Christmas Eve, the very scene of the Nativity was disgraced by a hand-to-hand contest between two parties of Greek and Latin monks. The combat was only ended by the armed interposition of the Mussulman police. This disgraceful contest at the anniversary time and very scene of the birth of the Prince of Peace is merely a somewhat exaggerated emblem of what happens all the year at Jerusalem. The Holy City is the scene of never-ending quarrels and intrigues between the French and Russians, who are both watched with dread by the Turkish authorities, —naturally fearing another war, with the Holy Place as a *casus belli*. In the midst of all this display of un-Christian activity the Holy City is itself neglected. The metropolis of Christianity, the metropolis of the Jews,—as a body the richest nation in the world, and one of them a *juif des rois*,—one of the sacred cities of the Mahometans themselves, is left by the three creeds in such a state of neglect, as to make it one of the filthiest and most unwholesome cities in the world. In the words of Professor Porter,—"The disease and suffering occasioned by bad food, crowded dwellings, and scarcity of water, are beyond description. . . ." Speaking of the poor Jews in Jerusalem, he says,—"There is more abject poverty and squalid misery existing among them than among any other class in the whole world. . . . . The Jewish quarter has no structure of note. It embraces the eastern declivity of Zion, and the deep valley below—the very spot where the proud palaces of their ancient monarchs once stood. Now clusters of tottering houses, and crooked filthy lanes, crowd the site of Solomon's gilded halls, and Herod's marble courts."

Leaving the Greek and Latin creeds to wrangle where they should pray and work, could not Protestantism step in, and, aided by modern science and engineering, purify the Holy City of the desecrating filth of ages, while charitably providing its poorer inhabitants with the means of health and cleanliness? Could not we English, who make honest work a part of our creed, and hold cleanliness next to godliness, expend a little of our superfluous wealth in this good work? Would a very large sum be required to purify and supply the Holy City with water? We excavate Nineveh, rummage Persepolis, and send expeditions to Boriboola Gha—could we not also examine the ruins of the religious metropolis of the world?

The work before us—a report to the London Central Committee of the British and Continental Syrian Improvement Association—is intended to fully answer these important questions. The title is almost a misnomer; as, in substance, the author contemplates the *restoration* of the ancient water-supply of Jerusalem.

From various sources, Dr. Whitty estimates the total area occupied by the ancient city of Jerusalem at 2,319,850 square yards, or 479¼ acres. Taking the most crowded parts of London as a standard, and thus allowing 423¼ persons to each acre,—a large estimate for a hot Eastern city,—the result is 202,882 as the total population. Josephus states that about 1,200,000 Jews were shut up in the city during its siege by Titus; but that this number was quickly diminished by war and pestilence. "Fifteen gallons of water per day for each individual" is the least amount required for health in an Eastern city. But leaving out comforts, and taking absolute necessities only into account, five gallons a day would make a total amount of 1,014,410 gallons. As the siege of Titus lasted 143 days, the probable minimum of water consumed during the seige amounted to 1,014,410 × 143 = 145,060,630 gallons. The population of the present city, according to the last and most probable estimate, amounts to only 20,330 souls. The Easter pilgrims are said to swell this number for a very short time, by 60,000,—at least according to Fuad Pacha's enumeration. The average annual depth of rain-fall in Jerusalem is 65 inches; which upon one acre would yield 235,950 feet. "This, multiplied by 213—the number of acres, omitting a few square yards—will give 50,316,337 cubic feet of rain-water which fall within the walls during one year; and allowing that, without any waste or loss by evaporation, the whole of this could be caught in cisterns, it would yield throughout the year a daily supply of 137,853 cubic feet, equal to 859,113 gallons per day, or more than 42¼ gallons for each individual; assuming, as before, the population at 20,330." These facts would show the common assertion, that there exists a lack of water at Jerusalem in consequence of a curse over the land, to be unfounded. But from the deficiency of cisterns, and the neglect of those in use, the poor in Jerusalem are estimated by Dr. Whitty to be in absolute want of upwards of 25,000 gallons per day during the summer drought.

Careful examinations and measurements have shown that the present summer quantity of water supplied to Jerusalem is only 66,910 gallons, or little more than 3¼ gallons per day for each individual. This is scarcely more than one-thirteenth of the quantity supplied per individual in London by pipe-water alone. The amount of misery denoted by these figures can only be properly reckoned up by reflecting that Jerusalem is a hot Eastern city, where five gallons of water per day for each individual is the absolutely least amount required for health. Dr. Whitty then gives a second chapter to an enumeration of all the sources and receptacles for water in the city and its vicinity, with their state of efficiency. The main sources of supply besides that due to rain-fall are the two wells in the valley of the Kidron, outside the city, the water of which is very unwholesome, being impregnated by infiltration from the common cesspools of the city. On account of the absence of any system of sewerage, all the water, from whatever source, is in a similar state, as "the cisterns are almost invariably vaulted chambers beneath the dwellings, and are in most cases only separated from the common cesspools by cemented walls, and neither cisterns nor cesspools are often cleansed." The water, for instance, from Ain Hamman-esk-Shefa thus yields no less than 185 grains of solid matter in 128 oz. by evaporation from ebullition.

Dr. Whitty next proceeds to specify the remedies for such a state of things in the metropolis of Christendom. He, 1st, points to an increase in the sources of water within the walls of the city by collecting the rain-fall which is now wasted. It appears from the careful observations of Mr. Beardmore, that the minimum average annual depth of rain-fall in Jerusalem is no less than 65 inches. "Within the city walls, exclusive of streets and unoccupied ground, there is an extent of 796,921 square yards of impervious catchment-surface, in roofs of buildings and yards, from which 38,872,762 cubic feet, or 212,259,719 gallons of pure water might be annually obtained," by simply constructing sufficiently capacious covered reservoirs. The geological structure of the district renders the sinking of artesian wells quite out of the question, and it appears that no true spring does now, or ever did, exist within the walls of the city.

2nd. An examination of the sources of water outside the city would show, that at least 837,965 gallons per day might be obtained from deep wells in the neighbourhood. The quantity also of water which might be procured by surface-drainage outside the walls, from the catchment basin feeding into Solomon's Pools, the Lower Pool of Gihon, the Upper Pool of Gihon, district N. and N.W. of the city, and Scopus (Mount of Olives) would give 849,420,000 cubic feet per annum. Thus, from the surface drainage without the city, the deep wells in the vicinity, and the rain-water from within the walls, we might get a total of more than 16,000,000 gallons daily. This amount would supply a larger population than that of London with five gallons of water per day. And all this would appear to be possible of accomplishment without the expensive work of forming any artificial impervious surface, by which means, indeed, this quantity could be even increased. Such a supply of water is, of course, unnecessary for the present small population of Jerusalem, and Dr. Whitty next proceeds to make an estimate more in accordance with the circumstances of the day, and the fact that the project is in the main one of charity,—but, nevertheless, intended to confer "no transient blessing upon the City of our Solemnities."

The question of water-supply is, of course, in intimate connexion with the sewerage of the city—"the cleansing it from the filth of ages," the accumulated strata of deposits from Israelites, Romans, Saracens, Crusaders, and Turks. The present so-called sewers appear to be merely undisturbed receptacles for filth, and to have been never intended to convey away the sewage matter. "Placed, as Jerusalem is, on an eminence,—with a considerable depression running from north to south through its centre, and a rapid fall then, downward through the valley of the Kidron, towards the Dead Sea, I know," says Dr. Whitty, "no city which might be more easily, or at less expense, provided with an efficient system of sewers;" and, as we have seen, there are plentiful means at hand for flushing them with water. Dr. Whitty proposes a large sewer along the line of the present street leading through the Mahommedan and

* Proposed Water Supply and Sewerage for Jerusalem. With Description of its present State and former Resources. By John Irwine Whitty, Civil Engineer, D.C.L., LL.D., M.A., Oxford and Dublin. And an Introduction by the Rev. Canon Stanley, D.D., Chaplain to H.R.H. the Prince of Wales. London: W. J. Johnson, 121, Fleet-street. 1863.

Jewish quarters. It might be taken out of the city, and lateral minor sewers be run out from each side, and one sub-main on the west side. In the sinking of the main sewer, "on the route of which cities lie on cities and ruins over ruins, 50 feet to 60 feet in depth," what inestimable relics might not be discovered? The Doctor proposes to utilize the sewage,—the great problem of the age, whether in England or in Palestine. Dr. Whitty does not estimate the expense of his sewer at more than 899*l.* "On account of the favourable position of the line of streets of Jerusalem" along which it would run, it is not necessary to sink it much below the surface. This would appear a sanguine estimate, especially as the navvies of the East have to be first taught their business. On the other hand, labour is generally cheap as to price, if not as regards quality. The already existing reservoir outside the Damascus Gate could be used exclusively for flushing these sewers; and its enlargement and repairs, with the formation of its tributary drains, would be the first works undertaken. It appears, according to Dr. Whitty, that an area of about 1¼ square mile, or 800 acres, could be made to feed its drainage into the Damascus Gate cistern. With an average to each acre of twenty-four lineal perches of drain-pipes, the total cost would be 10s. per acre, or 400*l.* in all for supplying this cistern with water, besides the Pool of Bethesda, Birket-el-Hejjeh, and others. The sewerage would thus far be provided for.

Nearly one hundred and fifty-three millions of cubic feet of water in the year could be drained into the upper Pool of Gihon to thus feed the Pool of Hezekiah. The surface which would contribute to this equals 2¼ square miles, or 1,440 acres; and the expense of preparing the surface of supply for the Pool of Hezekiah is estimated by Dr. Whitty at 720*l.* About seven miles in a direct line from the site of the Holy Temple are the three Pools of Solomon. These three pools, with the spaces between them, "occupy the valley for a length of 597⅓ yards," and their total capacity, according to the measurements of Dr. Robinson and others, is equal to 50,136,320 gallons. Under a complete drainage system, the catchment basin of these pools, according to the estimated rain-fall in Palestine, is capable of yielding more water than the pools would be able to contain. Dr. Whitty estimates that this work, viz., the sewer and its tributaries, the feeding of the Pool of Hezekiah, and the three Pools of Solomon, could be done with an expenditure of less than 3,000*l.* This outlay he considered sufficient for the more pressing wants of the city.

It would appear, however, that Dr. Whitty has made what may be termed an important discovery, the utilization of which would give Jerusalem a water supply much superior in convenience to even that under Solomon. According to Dr. Whitty's measurements, "the deepest part of the lowest Pool of Solomon is 81 feet above the bottom of the Pool of Hezekiah, in Jerusalem, which is 10 feet in depth; therefore it is 71 feet above the general level of the ground at that point, which is 6 feet higher than the street at the Jaffa gate, and about 16 feet above the base of David's Tower." The tower itself being about 60 feet in height, water might be sent with considerable force to the top, under a pressure of 27 feet, and a tank there is kept constantly filled. Dr. Whitty has "given the subject for years deep and anxious consideration," and has "ascertained, beyond all doubt," the feasibility of this crowning project, of "bringing the water by a tubular aqueduct from the Pools of Solomon, either to the top of David's Tower, or to the highest point within the walls." It seems to us not improbable that, though the ancients might have known as much, theoretically, about levels as we do; yet, being ignorant of the use of cast-iron, they could not, by means of masonry alone, build pipes to hold a great pressure of water. Dr. Whitty gives several alternative estimates, so as to meet different contingencies. The highest is 8,479*l.* 12s. 6d.; the lowest, 4,986*l.* 4s. 2d.

In the words of Dean Stanley, who has written the introduction to this book, its subject is invested with a "sacred halo"—which derives additional brightness from the religious and professional enthusiasm of Dr. Whitty. It is, indeed, impossible to read the book without catching some of the spirit of the writer. While, with the necessarily limited data at our command, we are fully willing to admit the feasibility of Dr. Whitty's plans, it would certainly appear to us that he has made his estimates too low. We would merely point to the experience gained in the construction of railways in the Levant, where, from various causes, the estimates, calculated from European data, have been generally considerably exceeded. We have not space to enter into the causes of this well-known fact; but we would point to the expense of importing skilled European labour, tools, and plant—to the lack of skilled labour in the East, and the inferiority and scarcity of all labour in those districts—to the difficulties of the climate and its peculiar fever, and to other causes well known to our railway engineers who have practised in the East. When we think of the object in view, however, and the smallness of the sum, even if the estimates were doubled, this consideration appears almost insignificant. We would further remark that Dr. Whitty seems to lay scarcely sufficient stress upon the necessity for converting the comparative barrenness of modern Palestine by replanting the forests. The extraordinary and lasting sterility caused, more especially in warm dry climates, by the denudation of the forests, is now being already felt in some parts of America. Dr. Unger, of Vienna, accounts for the present sterility of many parts of Greece also from the fact that the forests on the hills have been completely cleared away. The rain is re-evaporated before it can sink into the ground to form mountain streams, and the alluvium of the surface is washed down into the valleys, thus preventing the growth of fresh vegetation. The necessities, in the shape of fuel, of the remaining population, and the browsing of their cattle, annul the efforts of nature towards the restoration of the vegetation. The whole question as to the influence of vegetation—more especially that of hilly districts—on the climate and fertility of a country, would scarcely appear to have received the attention it deserves.

We trace all our religious life to Palestine—the land once flowing with milk and honey; and most of our modern intellectual life to Greece—the anciently fertile land of the olive-tree. How endlessly important it would be, humanly speaking, to know whether the denudation of the forest land of these countries is the immediate reason of their present sterility! Anything connected with Palestine and Jerusalem must have an engrossing interest for all of us. In our case, as Christians, archæologists, and professional men, we wish Dr. Whitty God speed and every success in his undertaking.

LEO VON KLENZE.

To speak of Leo von Klenze, whose death was briefly recorded in our last number, as one of the foremost professors of practical art-architecture in this century, would insufficiently testify to his merits. He was a great artist, but one who was favoured with opportunities for the display of an element of architecture which is an essential one, not so much as he was with commissions and patronage. A perception now accrued, if only with many of those who write, of what constitutes the true art, and the reports of travelled practitioners of architecture, have somewhat changed the character of our estimation of the buildings of Munich, with certain exceptions, from the opinions that were sometime current. British architects, or European, we now admit, though we may not fully act upon the conviction, that to stock a city with copies of structures, however fine the originals, or with styles selected because of their difference, is to exhibit as in a museum, the models, rather than to practise *architecture*—to exemplify the real and life-endowed art. Twenty years ago, however, or thereabouts, the fame of the little capital of King Ludwig had not fallen from the height to which Mrs. Jameson, in her "Visits and Sketches at Home and Abroad," Inglis, in his book on the Tyrol, writers in "the Foreign Quarterly Review," and others, had contributed to raise it; and it was common to express regret that a great empire like this of Queen Victoria, could not do, for its capital, as much as had been done for his metropolis by the monarch of a petty state. Such appreciation of the architecture of Munich, was heightened by the more exact knowledge which could be brought to England, of the fosterage and development side by side with architecture, of sculpture and painting in their higher walks, and of numerous branches of art subsidiary to decoration. In Bavaria, at least, it was thought that architecture, once more, was the *ars regina*.

For this office of architecture,—and it was a great one,—the enfolding in her own mantle, all the arts,—the men employed by King Lewis, were directed in a path which has conducted to permanent fruits.

Still, at the time of which we speak, an expression of the facts of the situation in nineteenth century art-architecture, of the Bavarian edifices, came to be expressed on the Continent. It reached the Institute of British Architects from one of its foreign corresponding members, who characterized the Munich buildings, much as we have spoken of them, or like unto specimens in a museum. Yet, Klenze, though he was one of those who ministered to the realization of what may have been his patron's limited idea of *architecture*,—an idea, but for the direct copyism enjoined, hardly conceivable of one whose appreciation of sculpture, painting, and decoration, seems to have been different, and so much more elevated,—had, even twenty years ago, as artist, produced probably more works, and true ones, than had his contemporaries Gärtner, Ziebland, and Ohlmüller. His Glyptothek, of very early date, was, and still is, in the main, an original and an admirable production: for, it utilizes in the *artist's* manner, the old models, Greco-Roman in this case, without copying them, and without sacrifice of a modern purpose to the antique idea. The interior at least of his Walhalla, has like merits; and the substitution (though partial, and not complete as should have been the case) of German mythology for the Greek and Roman, negatives the supposition apt to arise from the sight of the exterior, that the building is rather the work of an admirer of Grecian architecture, and a skilful reproducer, than of one who was endowed with the aspirations and qualities of the artist. His works during the last twenty years, include some, such as the St. Petersburg Museum, which, though they have found objectors, in our view fortify us as to the position in nineteenth century art, and in architecture of a larger range of time, which we are disposed to accord to the name of Klenze. The use that he and Schinkel made of Grecian architecture, indeed contrasts remarkably with that by the reproducers of the Grecian orders amongst ourselves; as his Italian Grecianized enters a field scarcely touched by our own architects, unless with the exception of Cockerell. Possibly to some influence from these later works of Klenze, is due a prevailing manner in some of the buildings in Paris, of the municipal class. Otherwise, the double or three-fold coincidence testifies to the existence of some matter of value in the field to which the pathway in each case led.

The biography of Klenze should be written in Munich in face of some of his works, and with opportunity of filling up from German sources, particulars of the latest portion of his career. For most of the particulars to 1856, which we are able to give, we have the authority of his own hand, in a corrected copy of a memoir addressed in the autumn of that year, to the present writer.

Leo von Klenze was born at Hildesheim, in Hanover, on the 29th of February, 1784. On the 26th of last month, on which day he died, he had very nearly completed his eightieth year. His father was Aulic Councillor, and lived on his own estate, which was at the foot of the Harz Mountains. Leo von Klenze is said to have shown taste for art in early youth, but to have been educated first for the civil service, and

afterwards for civil and military engineering. However, the account to which we have alluded, speaks of his scientific education as conducted in the neighbouring capital of Brunswick, in the Collegium Carolinum. Later, he studied in Berlin. In abilities, he was qualified for choice of one of several professions; but he preferred architecture, as our German authority says, "from an inward prompting." His father did not at first approve of the selection; but eventually assented, and to his visiting for purposes of study, France, England, and Italy. In Paris, he studied at the École Polytechnique, under Durand and others. A writer in a recent number of the *Athenæum* makes out that Klenze went to Italy from Paris, and that the sight of Pæstum, Herculaneum, and Pompeii, decided him as to his future profession; and further says that he was on his way to Vienna, to settle, when, in Mantua, he received a summons to Cassel, the capital of Westphalia, where King Jerome was then installed. The account which we prefer, is that he got to Cassel from Genoa, through acquaintance made with a lover of art, the proprietor of a palace, in the vestibule of which Klenze occupied himself, making drawings. The proprietor became General-Intendant at the Wesphalian court. In 1808, we find Klenze Court-architect in Cassel; where later he was Court-building Director (Hofbaudirektor).

When the fortune of Napoleon was on the wane, the kingdom of his brother was broken up; and in 1813, the appointments of Klenze in Cassel, passed away. Somewhere about this time, however, he appears to have been asked by Jerome to superintend for him the building of a town on the shore of the Adriatic, on the plan of the old town of Aquileia; but Klenze declined. He is thought to have been engaged at the time, in designing a Peace Memorial to be submitted to the Congress of Vienna. It is clear, however, that soon after his loss, in 1813, of the appointments, he went to Munich, and that there he became known to the Crown Prince, afterwards the king of Bavaria. It was from Munich that he went to Vienna, at the time of the Congress. From Vienna he went to Paris, where he again met the Crown Prince, on whose recommendation he was invited to the court of Maxmilian I., or Maximilian Joseph, then the king of Bavaria. The Crown Prince had already conceived the execution of some of the works which made his subsequent reign celebrated: some of them commenced prior to his accession; and an important mission opened before Klenze. This was about the year 1816. Ludwig's accession to the throne did not take place till 1825. In 1819, however, Klenze was appointed Royal Court-building Intendant, or Inspector, the first of a series of important offices which he held. They included the post of Oberbaurath, or Chief Councillor of Buildings, to which he was appointed in 1826, and that of President of the highest building assembly, or Board of Works, to which he was raised in 1830.

It may be useful here to set down, as we have found it convenient to do in other historic and biographical notices, some of the dates of contemporary buildings and events in Europe.

The year 1807 may be taken as the commencement in England, of the prevalence of the Grecian orders. Some modification of them, with art which was not always exhibited at the time when the original models became best known, had indeed been produced previously, as in England, by Holland, and in France by Antoine. In 1807, however, appeared the Antiquities of Magna Græcia by Wilkins; and Downing College, Cambridge, by the same architect was erected. In 1808, the Russell Institution was built. In 1809, were finished and opened Sir Robert Smirke's Covent Garden Theatre, having the Grecian Doric portico, and Harrison's Manchester Exchange, also Doric. In the following year Aikin's Essay on the Doric Order was published. Thus the abortive effort at copyism of Greek architecture set in; though with it, moved the practice of several other phases of what was not altogether the art. Sir Robert Smirke was engaged in the erection of Gothic buildings at the same time as he was on Grecian. In Paris, in this same first decade of the century, the Madeleine was commenced; and so were works of Percier and Fontaine,—including the Arc de Triomphe before the Tuileries, in 1806. In this latter year, the Arc de l'Etoile was commenced. In place of our Grecian attempts, the French preferred works founded upon Roman models, but into which they contrived to introduce an extraordinary amount of design in detail, along with exuberant richness.

Germany, at that time, can be scarcely said to have had art of its own. When the country had not been desolated by war, the imitation of French taste, was largely prevalent; and it was not till after the Peace of 1814, or rather that of the following year, that any distinctive modern German school arose. Then, Berlin and Munich became the chief homes of the new art, and Schinkel and Klenze its chief producers. One of the earliest works in Europe, reflecting Classical models, is indeed a German one. It is the Brandenburg Gate in Berlin, by Langhans. This gate was commenced in 1789. Before the Peace, however, many events were contributing in Germany, to the art which eventually grew up.

In 1805, Schinkel returned from Italy, and in 1810, his career may be said to have commenced. In 1806, the King of Bavaria conceived the idea of erecting a Walhalla.

The year 1809 is most important, as that of the revival of fresco-painting at Rome, where Cornelius, Overbeck, and Veit, were resident. These artists used the vehicle and process, in the decoration of a saloon for the Prussian Consul-General. The year 1814, when the German states threw off the French yoke, was otherwise a remarkable one. There were many projects for new buildings; and there was one for the restoration of Cologne Cathedral. Overbeck, Schadow, and Veit, became Roman Catholics, led by their particular aspirations and views, which Overbeck carried to asceticism. In the same year, the Crown Prince of Bavaria visited Rome, and was received with great honour by the artists, already looking to him for patronage. Gärtner at the same time visited Italy, where he remained four years. In 1814, the King of Bavaria issued the first programme for architects to prepare designs for a Walhalla.

In 1815-16, or thereabouts, there had been a competition of designs by architects, as well for the building last named, as for the Glyptothek; Klenze being in each case chosen, and commissioned to proceed. However, the preparation of materials for the Walhalla was commenced only in 1821; and we have a note of the date 1820, as that of the actual commencement of the Glyptothek, though 1816 is generally given as the date. In 1816 certainly, there was an idea of erecting a group of three buildings, whereof the Glyptothek was to be one; and which were to exhibit the three Greek orders. Of the group which is now complete, one of the buildings, besides the Glyptothek, is by Klenze. The Glyptothek exhibits the Ionic order: the second building by Klenze, the Propyläen, has Doric columns; and the third building, opposite the Glyptothek, the site of which originally was intended for a church, is the Neue Kunstaustellungs Gebaüde, or New Exhibition building, by Ziebland.

It is difficult to follow in exact sequence of dates, the works of Klenze, or to give a complete enumeration of them. The Glyptothek was the first commenced. The others followed rapidly after the accession of Louis in 1825; but some of them remained during many years in hand. Prior to the accession, that is in 1823, Klenze accompanied the prince to Italy. The commencement of the Glyptothek was followed by the Leuchtenberg Palace, which was afterwards that of Prince Luitpold, and is in the Roman or Venetian Italian style, and by several private buildings of similar character, as well as some works which are early Florentine. Then came the restoration of the monument in the cathedral of Speyer, of Adolph of Nassau; then, again in Munich, the Kriegaministerium, or War Office, which is old Florentine; the palace of Duke Maximilian, which is good Greco-Italian externally, and internally has much rich and beautiful ornamentation of the ceilings and walls; the "Bazar," that is, the range of buildings opposite the Odeum Platz and forming one side of the Hofgarten, which is of early Florentine Italian character, but called Venetian; the Pinakothek, Roman Italian; the southern side or portion of the Royal Palace or Residenz, called the Neue Königsbau, which is an attempted reproduction of the Pitti Palace; the northern side, or Festsaalbau, Palladian, (with a front of 900 Bavarian feet in length, or otherwise given as nearly 800 feet English,) and richly decorated internally; the Allerheiligenhofkapelle, or Court Chapel, dedicated to All Saints, a small version of St. Mark's, Venice, without external dome, and not long ago alluded to in these pages, with other of Klenze's buildings in Munich; the new wing of the Post Office; the Odeum; the Rumeshalle, a Grecian Doric Stoa, as a background to the colossal Bavaria; the Propyläen; works in and out of Bavaria already alluded to, and the designs for the completion of the interior of St. Isaac's Church, St. Petersburg, which have not been named; the Constitutions-Monument, near Geybach, a Grecian Doric pillar; the polychromed Ionic monopteral temple in the English garden, Munich; and the Befreiungshalle, near Kelheim, his last completed, and some say one of his best works. There are doubtless many other results of his labours, even in Munich. Architectural features of the statue of Maximilian Joseph, we know were by him. His works in St. Petersburg called him to that capital many times: he is also said to have been consulted by the present Emperor of the French on the completion of the Louvre; and if we recollect rightly, his evidence was sought in England on the subject of a National Gallery. The Glyphothek was completed only in 1830; the Pinakothek was in progress from 1826 to 1836; the Chapel of All Saints may have been commenced about 1826, a date which is ascribed to it, though it was dedicated in 1837; the Walhalla was commenced, the actual building, in 1830, and was completed in 1842; the new palace was completed in 1835, preceding the Festsaalbau; and the polychromed temple was completed not later than 1837. The Museum in St. Petersburg must have been completed in 1851; but Klenze had been commissioned to make designs, and had been invited to St. Petersburg in 1838, or 1839. Also about 1851, the Rumeshalle must have been in course of completion: the statue of Bavaria had been inaugurated in the previous year. The Propyläen, commenced in 1854, must have been completed before 1856; though the edition of Murray of 1858, omits all indication of it in the plan of Munich, and all mention in the text. The Befreiungshalle was long in hand; and its commencment, at least, has been often attributed to Gärtner. It appears to have been opened on the 18th of October last, to commemorate the fiftieth anniversary of the battle of Leipzig. It may easily surpass the Walhalla, which is sadly marred from many points of view by its terraced substructure, singularly deficient in art.

The Propyläen we are not inclined to class with the works which we have deemed amongst its author's best. It is very different from the St. Petersburg Museum. In plan, it has a centre on the arrangement of the Greek Propylæa, flanked by square towers, their faces battering. The upper portion of each tower is formed as a species of belvidere story, with small square shafts; and in the lower portion, is a square-headed doorway with mouldings of the base carried round to form an architrave, the whole being finished simply and elegantly, with other mouldings as a cornice carrying plain antefixæ at the angles and a more ornamental antefixa in the centre. Between the towers, the low centre of the composition in each face, the east and west, has a Grecian Doric portico, with pediment, and projecting one intercolumn. The order is Grecian Doric; though the shafts have bases, somewhat like those of the attached columns of the Temple of the Giants at Agrigentum. The portico is hexastyle; but the central intercolumn is wider than the others (but not wider than the ways through the flanking towers) to admit a carriage-way; and the intercolumns next the angles are the narrowest of all, as in old examples. The depth through, from front to front, counts six columns, and five intercolumns. Thus there is good effect of perspective. The internal columns, of which there are four in the depth (and there are sixteen of these columns altogether), are of less diameter than the front columns. All the columns stand upon a stylobate, with steps in each front; but in the centre, the platform is cut through, as we have said, for the carriage-way. The roof of the portico is stopped against a very low attic which connects the towers. However, the actual line of ridge, seen from some distance, would seem to run unbroken, as in the old examples, the *motive* being the same as that of one of the distinctive features of the Glyptothek. In that building, as we and others long since perceived and pointed out, the portico is not stuck on to a front: the roof is visibly continued back, as in the old examples; and roofs of the side buildings are stopped against a more lofty central building or portion of the composition. This may tend to greater height of the centre than is desirable; but the arrangement in each of these works of Klenze, deserves to be studied. The pediments of the Propyläen, are terminated by elegant

antefixæ; and the tympana are filled with sculpture by Schwanthaler, representing the song of the swan.

In this building, and the Walhalla, and in the Rumeshalle, of which we once gave a view, Klenze employed an order, Grecian Doric. In the Glyptothek, he had also used an order, an Ionic, but so treated as to present itself as new. In the St. Petersburg Museum, which we are able to admire, whilst assenting to some of the criticisms upon it, he dispensed with a great order, using only one to the middle story; and to the porches Persians; and he designed each front different from the rest,—an exercise of invention of which the idea seems seldom to occur to our own architects. The building generally is evidence that it is possible to derive matter of detail, and much of suggestion, from examples, and yet to avoid copyism, even where there might be such essential features of the old style as columns, which there are not in the case in question. Lately, neither has the value of the classical columnar works remained recognized by all; nor has the value of Greek examples, for new works which would omit the columns, been obvious.

Of the more important of Klenze's edifices, there is some record in the illustrated books which were published by him, or by others on his behalf. But books that come to us from the Continent in *livraisons* or "parts," however they set one example of publication and illustration to English architects, are the despair of bibliography. Klenze's publications which we have been able to lay hold of, include some that are well known; but, as they are before us, it is difficult to say whether each is complete. In 1823, Klenze commenced publication of a series of illustrations of the ornament of the Glyptothek. The title-page of the first "part" reads:—"Die Schoensten Ueberbleibsel Griechischer Ornamente der Glyptik, Plastik, und Malerei. Gesammelt, Gezeichnet und Herauzgegeben von L. von Klenze, des königl. baier. Civil-Verdienst-Ordens, und des Grossherz. S. Weimarischen Falkenordens Ritter, königl. baier. Hofbau-Intendanten und Oberbaurath des Innern, mehrerer Academien Mitgliede, etc." "Das Ganze wird aus 8 Heften bestchen, der Preis des Heftes auf schönem Baseler Vilinpapier ist." "Munchen, MDCCCXXXIII. Bei I. Unger und in Allen Guten Buchlandlungen Teuschlands." Three parts only (in folio) are before us. They contain no text, but in all 18 plates of ornament, as that of capitals, mouldings, and other members and details. Some of the plates are coloured to represent the polychromy. The book best known to English architects is the Collection of Architectural Designs partly executed:—"Sammlung Architectonischer Entwürfe für die Ausführung Bestimmt oder Wirklich Ausgeführt von L. von Klenze. Erstes Heft. Mit 6 kupfern und Steintafeln. München. Stuttgart und Tübingen, in der: J. G. Cotta'schen Buchhandlung. 1830." The date, we suppose, is that of commencement of the publication. The copy before us has thirty plates, large atlas folio, and eleven pages of letter-press in small square folio. It gives illustrations of the Glyptothek, the Pinakothek, the Constitutions-Monument; the buildings of the Odeonplatz, namely the Hotel Leuchtenberg, the Odeon, and the Bazar; the Palace of Maximilian, the War Office, and other works, including much rich interior decoration. With the "Sammlung," or as part of it, may be found what is generally considered the distinct work on the Walhalla. It is entitled "Walhalla in Artistischer und Technischer Beziehung. von Leo v. Klenze, Architekten. Mit xii. kupfertafeln. München; in der Literarisch-Artistichen Anstalt. 1842." This work is in atlas folio, with 8 pages of letter-press and 12 plates, including a good view of the interior of the Walhalla. The same date, 1842, is that of a small folio which was published in Vienna, and which gives illustrations of the decoration of the King's Palace: "Die Decoration der Inneren Raume des Kœnigsbaues zu Munchen." His last book referred to the St. Petersburg Museum:—"Das Kaiserliche Museum der Schönen Künste in St. Petersburg, entworfen und Ausgeführt von L. von Klenze. München, 1850. Literarisch-Artistische Ansalt der J. G. Cotta'schen Buchhandlung." It is in oblong folio, and has three pages of letter-press and twelve plates.

Klenze visited England two or three times in all. He was here about 1836-7; and he came in 1851. After the visit of 1836-7, he sent to the Institute of British Architects, of which he was one of the most honoured of the foreign corresponding members, a view of the monopteral temple above referred to, and a letter which contains some interesting passages. Having said that he considered the example to be the earlist one of "lithochromy" in our time, and explained that the site was on a hill, in the midst of lofty trees; and that the interior had a semicircular coffered vault painted in encaustic, he wrote thus, the emphasis to words being his own:—

"I cannot tell you how justly the execution of this little monument increases and strengthens my conviction, that *there is no classical architecture complete without the concurrence of colour*; and that such ornament forms an integral and adherent part. The non employment places a monument in the category of a landscape drawing, in indian ink, or in bistre, opposite to one of Claude Lorraine's. Thank Heaven! this construction is gaining ground considerably with us. I have already had occasion to construct a great polychrome edifice, a post-office. I am, at the present time, erecting a private mansion of the same kind; and thus this fine taste of antiquity is continually spreading.

Your pit-coal is, indeed, a terrible enemy to lithochromy, and you will perhaps *do right on that account alone*, to keep to the English manner of building of the Middle Ages, which I was highly pleased with, and which I prefer in every respect, on the score of beauty, to the Germanic manner of the present day.

I should fail were I to attempt to speak in general of the agreeable impression that I retain of your fine and great country, of what I saw there, and of the reception that I met with. Unfortunately it has crossed my imagination like a beautiful dream; but the remembrance will never be obliterated from my heart nor from my mind."

Little is left for us to say of the subject of our memoir, except that he was an accomplished architectural painter, and that he possessed a fine gallery of works of art.

It need not be stated that different governments and academies conferred upon Klenze, such honours as they had to bestow. He was lately one of the recipients of the Royal Gold Medal, which is given on the recommendation of the Institute. The Bavarian monarch, in 1831, after the completion of the Glyptothek, made him a privy-councillor. From a Chevalier, he at length became a Baron, and one of the Royal Chamberlains. The conductor of this journal was with him on his own ground a few months ago, at which time he seemed vigorous and well.

Viewing the capital of Bavaria, for architecture, chiefly as a museum, it has nevertheless exerted important influences, and even to the distance of England. These continue to be felt in the decorative arts. The biography of the man who most contributed to the realization of the efforts which were made in Munich, will deserve the careful treatment which it will be likely to receive from a German hand.

VANDYCK IN ENGLAND.*

ROYAL PORTRAITS.

It is in painting as in life: what is greatest is not always best. I should grieve to see *Reynolds* transfer to heroes and to goddesses, to empty splendour and to airy fiction that art which is now employed in diffusing friendship, in reviving tenderness, in quickening the affections of the absent, and continuing the presence of the dead.—*Samuel Johnson.*

SIR ANTHONY'S first work in England was a full-length of King Charles in his coronation robes,—one of the finest of his works, and well and widely known from the excellent engraving by Sir Robert Strange. "The anatomy of the head," says Strange, "is finely understood." For this portrait (so ill seen at Windsor) Vandyck seems to have made a more careful study than for any other of his many portraits; another, at least, equally careful is unknown.

The study from which Strange wrought (3 feet 9 inches high by 2 feet 3 inches wide) was carried abroad by King James II., given by him to Cardinal Philip Thomas Howard, from whom it passed to James Edgar, Esq., secretary to the grandson of Charles, of whose executors it was purchased during his stay in Rome by Strange himself. The whereabouts of this fine study has escaped my researches, and I have not been dilatory.

We have no clue or key to the order in which Vandyck painted his pictures; nor is this much to be regretted, since in the nine years he was to live among us (1632–1641) his style in no way altered. He seldom signed his pictures, or even dated them; but the Vandyck mint-mark is not to be mistaken.

Of *King Charles* he is said to have painted thirty-six portraits.

The *first* in importance, and, in some respects, in point of execution, is the large picture at Windsor of "*The King, the Queen, Prince Charles, and the Princess Mary.*" The king, in a black dress, laced with silver tissue, is seated in a very easy and elegant attitude; Prince Charles, in dark-green velvet, is leaning on his knee; the queen, in amber-coloured satin, holds the Princess Mary in her arms. Two of the queen's favourite dogs are introduced, and on a table near the king is the crown and sceptre. A dark crimson curtain forms part of the background, and beyond, on the left, is the Tower of London.

For this fine family picture Vandyck received 100*l*. It is in his best manner, and critics see, or affect to see, in its warm deep tone and mellow touches, the beneficial effects of his Venetian studies. When Pepys saw it in 1667, it was hanging in "the Matted Gallery" at Whitehall.

A *fourth* fine picture of King Charles forms one of the attractions of the Louvre. The king (a most graceful figure), in white satin and with his hat on, is standing by his horse, attended by an equerry and a page. Vandyck's account, sent in to the king, and still preserved in the State Paper Office, describes this picture as "Le Roi alla Crasse," and 200*l*. is placed against it; but this the King has scored through with his own hand, and put, instead, 100*l*.,—just half the price. This was done in 1637, when the martyr's troubles were beginning, his exchequer low, and his accounts in arrear.

At Euston, in Suffolk (the Duke of Grafton's), is a duplicate, as fine, it is said, as the Louvre original. This expressive portrait, all air and grace and ease and likeness withal, has been inimitably engraved by Sir Robert Strange, and just as inimitably described by him:—

"It is not an easy matter to convey in words a proper idea of the beauties of this picture, which in every essential of the art we must consider as the masterpiece of Vandyck.

"The king is here represented as just alighted from his horse, and in the act of walking.

"We may presume the scene to be laid in Greenwich Park; for here is evidently the Thames, and, on the opposite shore, the county of Essex. The figure of the king is majestic, and remarkable for truth and nature. His dress is finely imagined, and, concealing in no part the human form, it is light and picturesque. The accessory figures attendant upon the king are properly introduced. In the horse, particularly in the richness of his mane, there is everything that constitutes beauty in this noble animal. There is magic in the general effect of the picture, and the local colouring is finely understood. If we consider the landscape, it is magnificent. Here is no empty space, no naked void left open to fatigue the eye: the whole scene is clothed with richness and simplicity, affording a delightful specimen of the luxurious fancy of the painter, who has in this instance varied his pencil with innumerable beauties."

Still nobler in conception, and of exquisite skill in colour and all the essentials of true art, is his portrait of the King in Armour, on a grey horse, advancing from under a lofty archway, and attended by his equerry, M. St. Antoine. The original is in the Vandyck Room at Windsor, and copies (some call them duplicates) may be seen at Hampton Court, Warwick Castle, Middleton, Newstead, and Stapleford. The Windsor picture alone is wholly by Vandyck. Nor is its history uninteresting. At the sale, by appraisement, of the effects of Charles I. it was bought for 200*l*. by Remée Van Lemput, a Dutch painter living in Covent Garden. After the Restoration he demanded 1,500 guineas for his purchase; but the Crown recovered the picture by law, or threats of law, and the Windsor picture, as we now call it, was restored to Whitehall.

A third fine picture of the king is at the Duke of Marlborough's at Blenheim. The king is in full armour, on a fawn or cream-coloured horse, painted nearly in profile: at his side and on foot is Sir Thomas Morton, holding, as an equerry, the helmet of the king. This picture was sold at the king's sale, and acquired, many years afterwards, at Munich, through money and cajolery, by the great Duke of Marlborough. The horse (though its action is as delicate as if it were stepping to some soft Lydian measure or courtly strain) is Flemish in its make. What Marlborough thought of his acquisition may be gathered from a letter to his duchess:—

"I am so fond," he writes, "of some pictures I shall bring with me, that I could wish you had a place for them till the gallery at Woodstock be finished; for it is certain there are not in England so fine pictures as some of these, particularly King Charles on Horseback, done by Vandyke. It was the Elector of Bavaria's, and

* See pp. 40, 76, 90, *ante*.

given to the Emperor, and I hope it is by this time in Holland."*

Other portraits of the king remain to be noticed, without our seeking for the whole of the suspicious thirty-six. A very fine picture, "esteemed the best likeness of the king," was burnt in the fire at Whitehall in 1697. There is a copy of it by old Stone, at Lord Exeter's, at Burleigh.† At Blenheim, is a half-length very elegantly executed in a tender, silvery tone; at Wilton, a three-quarter in armour—a genuine, carefully executed picture, with a truncheon in his right hand, and his left on a helmet, which with the crown lies upon a table. At St. Petersburg is the Houghton whole-length in armour, bought by Sir Robert Walpole of the Wharton family, and described in Vandyck's account sent in to the king as "Le Roy en Armes donne au Baro Warto 50*l.*," reduced by the king himself to 40*l.*: by a mistake both the gauntlets are drawn for the right hand. At Lord Northwick's, in Worcestershire, was a full-length of the king, with Prince Charles, when a child. Lord Ashburton has a full-length—from the Malmaison Collection of the Empress Josephine,—but its parentage is at least suspicious.

I have yet to mention that incomparable picture of the king, the "Three Heads in Three Points of View," front, profile, and three-quarters, painted about 1637. for the purpose of being sent to Rome, to Bernini, the sculptor, who executed a marble bust from it, destroyed in the fire at Whitehall in 1697. The picture (now at Windsor Castle, and excellently engraved by William Sharp) remained in Bernini's possession, and was transmitted to his descendants, from whom, in 1803, it was purchased by Mr. Irving, and sent to England. In the year following it was bought by Mr. Champernowne, for 450 guineas, from whose possession it passed into the hands of Mr. Walsh Porter, and at his death into the hands of Mr. Wells, of Redleaf, in Kent, who, at the earnest intercession of George IV., was induced to cede it to the Crown for the price he had paid for it one thousand guineas.‡

Of the queen of Charles I. Vandyck is said to have painted five-and-twenty portraits, and in all he has made her the most ladylike and lovely of women. Some are well known, others may remain in obscurity, for it is utterly impossible that he could have painted twenty-five or twenty with his own hand. One of the finest was given to the Earl of Strafford, on the 12th October, 1633, and is now at Wentworth House, in Yorkshire, the seat of Earl Fitzwilliam. Vandyck received forty pounds for it. It is a whole-length, in blue, exquisitely ladylike, and most beautiful in point of colour. Her Majesty is attended by Jeffrey Hudson, the dwarf (in crimson), with an ape on his shoulder. A second full-length, and fine, is at Althorp; a third, in an orange silk dress, at Warwick Castle; a fourth, at Woburn; a fifth, in white satin, very fine, at Lord Clarendon's, at the Grove (engraved in *Lodge*); a sixth, at Lord Ashburton's, in Piccadilly; a seventh (the Wharton and Houghton picture), at St. Petersburg; and an eighth, in white satin, at Windsor Castle. Half-lengths are less common. There is one at Wilton, a companion to the King in Armour, but not so good;§ another at Blenheim, very elegantly executed; and a third, in white satin, at Windsor Castle. "Of the numerous portraits which Vandyck painted of her, this," the half-length, at Windsor, says Mrs. Jameson, "is the most attractive, and gives us a strong impression of the lively, elegant, wilful Frenchwoman, whose bright eyes and caprices so fascinated her husband." The royal crown and a red rose are on the table near her. The king thought so highly of the picture, that it was hung in his bedroom.

It would be easy to add to the list already mentioned of Henrietta's portraits by or after Vandyck;‖ but two alone seem worthy to be added—the two described in Vandyck's account sent in to the king, as:—

"La Reyne pour Mons. Barnino, 20*l.*"
"La Reyne pour Mr. Barnino, 20*l.*"

the full face and profile, now at Windsor, made for Bernini, the Italian sculptor, as studies for a bust. The full face is the least interesting, but there are still the eyes of Henrietta.* The king in his necessities reduced the two to 15*l.* a piece; now, under Christie's hammer, they would sell, at the very least, for 500*l.* a piece.

Three pictures of the Children of Charles I., by Vandyck, are in the Vandyck Room at Windsor Castle. The earliest and best represents three on one canvas,—Prince Charles, the Duke of York, and the Princess Mary, afterwards Princess of Orange. The figures are full-lengths. The youngest, the duke (afterwards James II.), is in the centre; a dog is by the side of the princess, and one still larger to the right of the prince. The whole composition is admirably balanced: a life-like air pervades every portion. Duplicates exist,—one at Wilton, dated 1635; another at Turin; and a third at Dresden; though I suspect that the last is only a copy by Sir Peter Lely. Of this fine picture there is a noble engraving by Sir Robert Strange.

The second picture, which Vandyck painted of King Charles's children contains five full-length figures,—Prince Charles, then seven years old, with his hand on a noble mastiff, painted as if "made to be pulled about by a parcel of royal infants from generation to generation; the Princess Mary; James Duke of York, then four years old; the Princess Elizabeth; and the Princess Anne, who died an infant. This well-balanced group, a masterpiece of arrangement, was painted in 1637 (the date is upon it), and is thus described in Vandyck's account of his claim upon the king:—

"Le Prince Carles avecq le duecq de Jarc, Princesse Maria, Pr^s. Elizabeth, Pr. Anna..... £200."

The amount (200*l.*) is scored through by the king, and 100*l.* (half price) written against it,—not, I suspect, as the king's pecuniary appreciation of the picture, but to keep for the time his "extraordinary" expenses within bounds. This capital picture was purchased from David Collyer, Earl of Portmore, by King George III., and is the solitary purchase by that sovereign of a picture by an old master. This Lord Portmore married a bastard (a Sedley), of King James II.

"And Sedley cursed the form that pleased a king."*

The "good old king" knew nothing, of course, of the history of the picture.†

The third (and last) royal family picture which Vandyck painted was a full-length, in armour, of Charles II., when a boy of eight or nine. The prince, leaning on a plumed helmet, holds a pistol in his right hand. This favourite picture was painted for the queen's collection at Somerset House, and is thus described in Vandyck's account sent in to the king:—

"Le Prince Carlos en Armes pour Somerset... £40."

The sum is unaltered in the account. The history of this picture is curious. The appraisers of the king's effects found it in the queen's closet at Somerset House, appraised it at 25*l.*, and sold it to Colonel Webb, 26th October, 1649, for that sum. This Webb was a

BRISTOL CATHEDRAL.

NORTH-EAST VIEW. *See p. 134.*

* Duke of Marlborough to the Duchess, Nov. 8, 1706 (Mrs. Thomson's "Private Correspondence of the Duchess of Marlborough," i. 78).

† Granger, ii. 350. Ed. 1775.

‡ I do not believe in the Vandyck parentage of Lord Yarborough's oval head of Charles I. At Warwick Castle is a half-length, dated 1637. (Manchester Art Treasures Catalogue, p. 52, No. 661.)

§ This is the picture referred to in the Lord Chamberlain's MS. Warrant-book:—"1633, May 24. A warrant to Sir Anthony Vandyck to deliver his lordship the picture of the Queen he lately made for the Lord Chamberlain" (*i.e.* Philip Herbert, Earl of Pembroke and Montgomery). An entry of a like date, to Mytens, directs the delivery by him of the King's picture to the Lord Deputy (*i.e.* Lord Strafford).

‖ Thus we read in Pepys:—"1665, Sept 13. I was only pleased [at Sir William Hickes's, at Ruckholts, Essex] at a very fine picture of the queen mother, when she was young, by Vandyck; a very good picture, and a lovely face."

* "Such eyes as yours on Jove himself have thrown
As bright and fierce a lightning as his own."
(*Waller*, to the queen, occasioned upon sight of her Majesty's picture.)

* Dr. Johnson.

† At Burleigh (the Marquis of Exeter's) is a contemporary copy by Henry Stone.

large purchaser of the king's effects, more especially the Vandycks.

My next communication will catalogue "a Clarendon Gallery" of men who stood or sat to Sir Anthony at his house in the Blackfriars of London. Peter Cunningham.

NOTES FROM STRATFORD-ON AVON.

In the pleasant town of Stratford-on-Avon there is a busy note of preparation. Each week the excitement of the good people of Shakspeare's town increases, and so large is the number of visitors who are expected to arrive here at the coming celebration, that people are puzzled how to meet the expected demand for lodging and other accommodation. Already bed-rooms have been let to speculative agents for about 5*l.* a week each; and we are told that one person has been offered 70*l.* for the use of a small house during the festival time. Nor will the matter of lodging be the only difficulty; for, in a town with a population of about 3,000, it will not be an easy matter, on a temporary occasion, to provide food for some 10,000 visitors who may be expected. Even in the matter of butchers' meat the arrangement is not easy; for there are not, in a small population, the same facilities for disposing of the coarser joints as there are in the metropolis and other large towns. Plans will, however, be devised by which proper supplies will be obtained from Birmingham and elsewhere. It is to be regretted that persons in Stratford are looking to make an extraordinary amount of profit during the festival week. Complaint cannot justly be urged of persons availing themselves of the opportunity to profit; but there can be no doubt that, if charges are raised to an amount which verges upon imposition, the endeavour will be defeated, and damage done to the celebration, which many are anxious to honour. If 5*l.* be charged for a single bed-room, without any other accommodation, it is probable that the expense of one person would be little short of 15*l.* This would deter, and is a matter well worthy of the attention of the Stratford Committee of Management. There are some very large inns here; and in many of a more humble kind, which do not present a very imposing appearance from the front, comfortable quarters are to be found. Besides, round about Stratford, at no great distance, there are snug farmhouses, the tenants of which would be glad to receive visitors on moderate terms; and quick trains might be run expressly to Birmingham and Warwick. Some suggest that quick trains might also with advantage be run to and from London. We fear, however, that a long railway journey twice a day would, if even the fare were made small, be so fatiguing to most persons, that it would prevent any enjoyment from the proceedings.

The present accommodation at the railway station here, which is close by Anne Hathaway's cottage at Shottery, is very bad for second and third class passengers. There is not a seat provided in this waiting-room; and, when last at the place, we saw a group, composed of a very aged woman, some younger women, and children, endeavouring to rest themselves upon their luggage. When it is considered that the second and third class passengers are the chief sources of profit to railway companies, it shows little sense to allow a want of this kind to exist.

The wooden shed for the meetings and performances is roofed in, and the glazing has been commenced. Externally it is an unsightly object, but the large proportions of the interior will be imposing, particularly if taste be shown in the decoration. Care must be taken, if drapery is used to a large extent for this purpose, that there shall be no chance of accident by fire. The entrances, too, should be numerous and well considered. It is best to err on the safe side.

One of the largest inns here, the George, has been for some time unoccupied, and is rapidly falling into decay. This is an extensive building, where, not long since, it was usual to make up between 100 and 200 beds for the night; and often, in the hunting season, sixty or seventy scarlet-coated sportsmen might be seen passing under the gateway. But something ails the place now: it is quiet and deserted. Parts of it, however, are to be fitted up for the reception of about 100 policemen, who will be gathered from different parts of the adjoining country.

A procession, somewhat similar to that which took place in Garrick's time, nearly one hundred years ago, is looked forward to by the townspeople and those dwelling near, as at Warwick; and we are told that this has been determined upon. If so it is to be hoped, that it will be well managed,—for a matter of this kind, if not properly done, becomes ridiculous. In right hands it might be a goodly show.

In Stratford-upon-Avon, the aspect of the streets has changed since Shakspeare trod them; but although much has disappeared in the course of about three hundred years through fires and the constant changes which pass on, still a careful observer will see here, as in London, under disguises, evidences of the past. Many will dive into back parts where the fronts, notwithstanding the attempts which have been made, indicate age, and they will be well rewarded for their trouble. But the chief places of interest at the approaching tercentenary meeting will be the birth-place in Henley-street, the excavations at New-place, the Chapel of the Guild, the Grammar School close by, and the interesting church wherein the immortal poet rests.

At the birth-place, the restoration has been judiciously carried out. The old portions have, for the most part, been preserved; and it is easy to distinguish what is actually original from that which it has been needful to replace. At present a charge of sixpence is made for a view of the chief part of the interior, and sixpence more for admission to that portion of the building which has been appointed for the reception of a Shakspeare Museum. The lady who is now custodian here seems a person of education, whose late husband had been for long honourably known in connexion with the corporation of this town. But as regards the museum, we decidedly object to a regulation which prevents any one from making sketches of the very remarkable and interesting objects which are here to be found. By an application to the secretary of the Shakspeare House Fund, leave may be obtained to sketch parts of the interior; but as regards the other portions, it is rendered comparatively useless by the present regulation to the general public, who might be informed of what is here, by the distribution of illustrations. We are told that the main part of this museum was the property of the well-known historian of Stratford-on Avon, and that it had been sent here by the sister of that gentleman; but many of the objects which are to be found in it have come from other quarters, as from Mr. Halliwell and others.

Amongst the matters of note here are,—a deed made in 1596, proving that John Shakspeare, father of the poet, resided in the house called the birthplace; a fine levied on the purchase of New Place by Shakspeare, in 1597; the letter from Mr. Richard Quyney, to Shakspeare, 1598, asking for a loan of 30*l.*,—the only letter addressed to Shakspeare which is known to exist; a grant of four yards of land in Stratford-fields; William and John Combe to Shakspeare, 1602; copy of Court-roll, 1602; surrender by Walter Getley to William Shakspeare of premises in Chapel-lane, which the poet specifically devised by his will; declaration in an action in the Borough Court — William Shakspeare *v.* Philip Rogers, to recover the price of malt sold by Shakspeare, 1604; assignment of lease of a moiety of the tithes of Stratford-upon-Avon—Ralph Huband to William Shakspeare, 1605; deed with the autograph of Gilbert Shakspeare, brother of the poet, 1609. There are other documents, the most important of which are the settlement of Shakspeare's estates, in 1639, by his daughter, Susan Hall—his granddaughter, Elizabeth Nash, and her husband, Thomas Nash; declaration of uses relating to New Place and other Shakspearian property, 1647, &c., &c.; probate of Lady Barnard's will, 1669; Shakspeare's gold signet ring (?) with the initials W. S. and a true lover's knot between; Charter of Foundation, 22nd Edward IV., 1482, of the Free Grammar School, at Stratford, at which the poet was educated; an ancient desk, said to have been removed from the Grammar School; and a cast from the bust in the chancel by G. Bullock (only two are said to have been taken); the old sign of the Falcon, at *Drunken Bidford*, where it is said that Shakspeare enjoyed too deep potations; a model of the poet under the crab-tree; Shakspeare's jug, from which Garrick sipped wine at the jubilee of 1769; a phial, hermetically sealed, containing juice from Shakspeare's mulberry-tree, which was cut down in 1758, by direction of a man of barbarous taste; specimen from an original copy of the "Merry Wives of Windsor"; portrait of Garrick, in the character of Kiteley, by, it is said, Sir Joshua Reynolds; portrait of Mrs. Garrick,—a beautiful face by Gainsborough. There are many other objects here which for want of space we must not mention.

On the site of the old market cross, which has been removed, a very ugly building has been placed. Some of the original houses remain close by. It has been suggested that a monument to Shakspeare should be erected on this spot. The situation is good. Then comes the Grammar School, where at times the head-master is not in smiling mood. Hundreds will apply here for admission. Let us hope, therefore, that in order to prevent disappointment, the boys during the festival week may have a holiday, and that the school-rooms may be easy of access. Near is the chapel of the guild, the present state of the interior of which will disappoint many; and then come the excavations at New Place. Next is the poet's grave, in the chancel of the splendid church, close by which passes the Avon. At the time of Shakspeare's birthday, the green buds will be bursting forth, the rooks will be busy, and birds of many kinds will be singing sweet notes. No poet's grave could be better placed.

THE NEW LIGHT.

Many can remember, in country cottages and in the houses of poorer people in towns, the general use of a small and dismal lamp, with sometimes a cotton wick, and at others a piece of dried rush, fed in certain cases by coarse and by no means sweet-smelling whale-oil, and in others by grease. These were the lights by which women worked at their stocking-knitting or twirled the spinning-wheel; while the men and youths would beguile their winter evenings in vacancy around the fire-place: books were then scarce, and reading not much cared for by persons of this class. Artificial lighting in such cases was not much better than that in use amongst the Esquimaux. Even street-lamps were at one time supplied with whale-oil, and most of the shops were lighted, at best, by dipped or moulded tallow candles, some of which were hung in a kind of chandelier form. Those tradesmen, however, who wished to outblaze their neighbours, introduced lamps of a superior kind, in which was used seal or sperm oil. Engravers, and those who were engaged in the execution of fine work, used lights of this description. The cost of wax candles in the houses of the gentry at that time was very great: the price of sperm, seal, and whale oils, in consequence of increased demand, and the scarcity of whales, rose to a high figure; but the price of tallow candles became more reasonable, and gas at length suddenly shed a splendour into the streets.

Of late, in provincial towns, and even in some villages, gas-lights have been introduced into the dwellings of the working classes,—a practice which adds to the cheerfulness of homes, and is not more expensive than candles. In Manchester, most new houses, of even the third class, have gas-pipes laid on at the time of building. In London this is not so generally done even in new houses of this class; and to lay the pipes to old ones, by re-opening the pavements, is a seldom recurring art.

Of late, however, lamps constructed for the use of paraffine or petroleum and Colza oils are coming much into use in the houses of the working classes; and it is stated that in the longest days of winter, when light is needed from between four and five o'clock p.m. till between ten and eleven, and also in the morning, the cost is only about eightpence a week: common candles would come to about a shilling; while the paraffine gives three or four times the volume of light that could be obtained from candles for that money. The advantage, however, is to a certain extent counterbalanced by the danger which attends the use of this material. We hear of constant accidents from its introduction; and we fear that without some carefully considered regulations respecting its sale, the number of fires will be permanently increased from this cause. That there are two kinds of so-called paraffine oil, however, in the market, one of which is by no means dangerous, some traders seem to know, while others are either ignorant or reckless; and it is certain that the very dangerous paraffine is often sold under a warranty that it is safe; by which means many poor women and children are burnt, houses destroyed, and other mischief is done. No doubt persons who are in this way guilty could be forced to pay damages; but something more than this is needed for the protection of the public.

MIDDLESEX LUNATIC ASYLUMS.

WE learn from a report of the Magistrates' Committee for Accounts, quite recently published, that, taking the two asylums together (Hanwell and Colney Hatch), and with them the item under the head "County Lunatics in other Asylums," it will be found that the cost together to the county has fallen short of that of last year to the extent of about 380*l.* :—

	£	s.	d.	£	s.	d.
Hanwell—Cost to the county	15,219	3	11			
,, To the parishes...	34,191	4	5			
				49,410	8	4
Colney Hatch—Cost to the county	36,612	6	2			
,, To the parishes...	43,094	11	10			
				79,706	18	0
Other Asylums				264	2	7
				£129,381	8	11

The number of patients in Hanwell Asylum on the 31st of December, 1863, was 1,601; being an increase on 1862 of 99.

The number of patients in Colney Hatch Asylum on the 31st of December, 1863, was 1,930; being an increase upon 1862 of 58.

The following paragraph of the report deserves the consideration of other counties:—

"Your Committee may again remind the Court that, while the maintenance in the asylums is under 10s. per head per week, the charge at the private licensed houses ranges from 13s. to 14s. per head per week; thus, estimating the saving at 3s. 6d. per head per week on the 3,531 patients now in the two asylums, it will be found to amount to nearly, if not quite equal to, the whole of the annual interest and redemption of capital of both buildings."

In other words, if we read it rightly, without incurring any increased present expense, in about thirty years from the time of borrowing to build, the asylums will be the unincumbered property of the county, and there will thenceforward be a saving of 3s. 6d. per head per week in the cost of lunatic patients.

The enormous extent of the malady (the numbers above given only representing those of the afflicted in Middlesex whom their relations cannot maintain), and its cost to the saner part of the community, must strike with awe every one who considers it.

ANTIQUITIES: THEIR STUDY AND IMPORTANCE.

OLD things are apt to be cast aside as worthless: they receive little consideration, and are counted by many as so much lumber, clogging up the rooms and ways; a slight respect, from some inexplicable reason or other, preventing their entire and immediate annihilation; whilst others have an idea, that a thing kept seven years is sure to turn up useful, and a hoard of oddments is the result, which remain septent after septent, to no purpose whatever, till at last, maybe the establishment is broken up, and the scraps are scattered abroad, like the constituents of a compound substance—not to destruction, but to form integers in other collections of a similar kind.

It takes a long time, however, for an old thing to become "antique." It has, as it were, to grow up, attain maturity, and then to enter what may be called a fossil existence, which with care is to be its condition for ages.

"Antique," too, bears rather the meaning of old and elegant, as now understood in the collection of ancient articles, in the course of accumulation,—something worth preserving, for its great age, its rarity, and, in many cases, for its beauty. And it is wonderful to find through what long periods and vicissitudes many trifling articles have been preserved,—not from care and being stored away for the purpose, but often from burial, from loss in rivers, from natural convulsions, from sepultural rites, from hoarding until better times, and the many accidents of flood and field with which humanity in her various phases has had to contend; handing down to us by these tokens glimpses of the daily life, manners, and customs of the peoples who have ceased to exist on the face of the earth, or whose characteristics have so merged into new branches and races, that they now hold no primary place in the economy of our globe, while they form illustrations to elucidate the old text which has reached us, and are therefore important links in the chain of evidence which these days are gathering up of the earliest periods of the world's history, so far as man is concerned. And this not only of art matters, but permeating through all the channels of taste and utility, to the most simple domestic application,—the luxuries and necessities, the ceremonies, sacrifices, worship, and penal enactments, each and all telling us palpably their exact and unerring story, by the fact of the instrument or object itself existing and being placed before us for our study and behoof.

And what really marvellous stores of information have been accumulated from a diligent search for, and preservation of, these relics of the past; and how important is the place they occupy, in the estimation of the thinking men of this period; and rightly too, for the reasons amongst others above enumerated.

They attract our serious attention in many ways, and are deeply interesting, as revealing the state of society and civilization at the time of their use, and also the condition of the various arts of refinement, upon the superiority of which in the present day we are apt to pride ourselves, but which an examination of many ancient items and records will show to have flourished in great splendour many long years since, and of which we are prone to avail ourselves as precedents upon which to act, and authorities from which to quote: we embody them into the doings of the present century, and refer to them with pleasure and profit.

In the first rank we may place buildings: structures for the habitation of man, fanes for his religious observances and ceremonies, tombs for his remains, or memorial monuments to his bravery, learning, or celebrity; and here a wide and important field of research and study is at once entered upon, as by them we are informed of the ideas that prevailed at various epochs in many countries as to architecture, building, and construction, and their glorious remains form examples to guide and encourage the designer in the present day. There are their methods of using their material; there are marvellous weights raised to important heights; there are great domes, extensive vaultings, elaborate detail, wondrous carvings, and evidence of peculiar and subtle processes of manufacture. Then we have enrichings of marbles, mosaics, and encaustic pavings, or stories carved in stone. Then symbolic writings on the walls, on the tombs—everywhere, the meaning of which has been now revealed to us by proper courses of arduous parallel study; and then, and not least, we have the great Biblical confirmations which have from time to time been afforded by the pursuance of these things, and which is surely a matter of the highest consequence, and of immeasurable importance.

Great results frequently flow from small beginnings, and it is therefore well that this subject should be diligently pursued, so that everything may be gathered up—that even the fragments be not lost.

How important may a trifle or fragment become in fixing the date of various events? As the occupation of a country by a certain people, or the reign of a particular monarch. Thus coins have been found of considerable use in numerous instances; and the finding of buried arms, as spear-heads, daggers, &c., may assist materially in fixing the place of some ancient battle-field. So of the burial-places—the cumuli—the sepultural urns—the stone coffins—the papyri — remaining to us as tell-tales of bygones, and which are now examined with the greatest interest, and preserved with proper and anxious care.

A study of these various matters naturally, perhaps, causes the mind to revert to the periods when they were every-day things; when the ancient peoples—as we do now—transacted their daily business, performed their rites and ceremonies, fought their battles, lived, wrought, and died. The great world has continued to roll round, but the races have disappeared—their place knowing them no more. All that is left of mighty nations, of vast cities, of enormous wealth, of vigorous enterprise or luxurious ease, is a few crumbling remains of buildings, of ornaments, of tombs, or some mounds of sand and earth. An oblivion, hanging like a mighty pall over many an immured town or temple, barely lifted some centuries afterwards when the place is delved, and some evidence of human pre-existence is brought to light; all this affords material for much thought, of the workings of time, and unflinching and unceasing powers of the destroyer, levelling the greatest with the dust of the earth.

But, on the other hand, had there been no vestige whatever left to us of the former condition of things, we should be very much more at fault than we are concerning them. Our notions of the earlier races of humanity would be not merely peculiar, but to a great extent untruthful: the inventive faculties would be freely exercised, and our theories formed upon the wildest possible traditions, or upon purely imaginary data. Thus all that has been revealed to us by modern research and discovery in the field of antiquities,—all we have gleaned of the *status* in civilization, of the cultivation of learning and the arts, that prevailed at various bygone periods, tends to set at rest for ever many moot points; and indeed rather leads to a feeling of humbleness, that with all our boasted (and undoubted) progress and superiority over any earlier period of human history, we find, from the various traces discovered, that refinement of a very high order prevailed many centuries since; that although we may and do excel in various new and important branches of the great social economy, we have yet in some things been forestalled by earlier races, of whom we are therefore, to some extent at least, but followers and imitators. We, however, gain information alike from flint axe-head and fibula; from papyrus and coin; from earthen vessel and mosaic pavements; from bull of Nineveh and Venus of Rome; from sphynx and caryatidæ; from the coat of mail and the most delicate ornament; from the gigantic monolith and the tiniest scrap which the tutored hand disengages from the *débris*. All are teachers; all a "tale unfold" of civilization or barbarism; of wealth or poverty; of warfare or peace; of luxury or necessity; of Christianity or heathenism;—all with their multifarious ramifications are deeply interesting and valuable, as pointing out the true direction of real progress and advancement.

This, however, is an age of revivals: there is a great tendency to copy the configurations of ancient things, great and small; and probably as the world grows older this feeling will be enlarged. In earlier times of course change must have produced originality. There were all the great fields of untried form and material to work upon—nay, to revel in; affording immense scope for new combinations and improvements upon those then existing. But in our day, especially as regards those matters which are used now as they were in earlier periods, we are very prone to fall back upon old forms, old figures, old material, as the basis upon which to work. Originality, being more shown in the adaptation and combination of the material, than in the idea of the composition,—and fine art and high art in the manufacture of articles of luxury and of more general use,—consists very much in the reproduction of the eminently beautiful, and therefore always acceptable forms, which the research of the antiquary and the archæologist has brought to our notice. So much is the antique prized and valued by the connoisseurs of the day, and therefore so important is it to preserve any relics and vestiges that may be found, which may serve as examples, and tend to stem the ebb-tide of decadence which may once and again threaten us, and assist to give vitality, and to revive the embers of taste which may show signs of weakness and poverty. As there have been periods of light and of darkness in art matters, there has been pushing vigorous energy at one time, and great lassitude and laxity at another. A surfeit of beauty seems to have found its antitype in a graduated heap of contorted ugliness. Alloy has crept in, and at last prevailed to so considerable an extent that the original purity has disappeared altogether. The sunlight has waned, and darkness prevailed, leading the minds to grope about and compose without rhyme or reason, until a new dawn has arisen, when the hideousness of the night has revealed itself, defects and incongruities are discovered, and, as with the freshness of a new pursuit, better things begin to prevail.

As the world grows older, we thus become rich in comparisons, precedents of good and bad; and discrimination must be vigilantly exercised, so as not to reproduce *everything* that is found. It should be remembered that what has been discovered had a special use: we may modify and adapt it to our present wants, copying rather the *spirit* of the design than the entire and slavish duplication of the object; and we should always bear in mind that whatever we now make, whatever is to any extent an imperishable production or manufacture, will possibly one day become an antiquity, stamping and marking by its presence and its form the style and the ideas of the age in which it was made. If it should be preserved by any of the wonderful, but perhaps involuntary, processes by which many things supposed to be lost for ever are handed down to future generations, it will serve as a record of the age that

gave it birth; and whether it be in buildings, in articles of *vertu*, in pictures, in arms, accoutrements, coins, or objects of domestic requirement, they will alike bear their testimony, in their several capacities, of the excellence or paucity of design, and the general condition of art at the period of their erection, execution, or manufacture. And doubtless many things will, in ages to come, create wonder as to what possible use they were applied. In this day of metals and mechanics, when the very great development of automatic appliances so multiplies the form and intricacies of various items—when hand labour is more directed to the making of machines to perform work than in the direct execution of it as heretofore,—much uncertainty will be likely to prevail, and greater assistance will be required from written description than is even now the case; and explanations will have to be sought, with great diligence, as to the uses and properties of (we may suppose) the then mysterious combinations.

The museums of the present day, with all their hoards of ancient curiosities, will sink into the shade, by the side of those yet to be called into existence, by perhaps new races of people, when our every-day objects, machines and appliances, become antique, and carefully stored away, for the use and wonderment of the students; when all the new principles which have been eliminated even within the present century, with all their various elaborations and ramifications, *in esse* or *in posse*, shall have become obsolete; when the "iron age" -as we are pleased to call it—shall have the interesting representatives of its earlier efforts and its first attempts stored away for the inspection of the curious. There will be such a heterogeneous collection as the world never saw before. But should such collections be left to the "accidents" of Providence? So rapid are the changes which take place, the improvements, inventions, and alterations superseding and outrunning each other day by day, that many things of importance are likely to be lost, and the true sequence remain unknown. Now museums of all kinds are standing histories, whether of natural wonders or the efforts of the human mind and hand. They should therefore be established and continuously increased, embracing as large a range of objects as possible, which must ever prove interesting as mere exhibitions, while, at the same time, they would act as guides to those contemplating new productions, leading them to abandon what they see has been already done, and encouraging them in any really new discovery they will then be more sure they have made. Museums, however, will not to any extent apply to buildings, which constitute an important phase of antiquities. These cannot be stored in boxes and glass-cases, but, for the most part, have to bear common wear and tear, as well as to be subject to the constant sources of decay, by which they are surrounded. Preservation of these is a matter of great delicacy. The rude hand would very soon obliterate some most interesting features, or would demolish the structure altogether in favour of a new one upon a modern pattern; but surely in the case of churches or monuments, sacred from other causes, this should not be allowed; and where it is possible, by judicious repair, to preserve it even at some little public inconvenience, it is highly desirable to do so, where any peculiarity or beauty in the building warrants such a mode of treatment.

Obstructions which have been superadded may be removed, and the original form laid open—restored, in fact, to its proper condition. Little else should be done; and it may then be left to tell its tale to future antiquaries. Hundreds of years has it been spared, the fanaticism even of illogical Puritans serving, by covering over, plastering up, and boarding in, to hand down to our own day many parts of great value and beauty. Surely, then, in this age, professedly so interested in such matters, we should expect to see every care taken of the sacred temples and ancient halls, those great landmarks of a nation's history, so that they may be preserved for the behoof of the future, to the credit of the discernment and critical acumen now displayed and exercised in so desirable a direction.

Not that old buildings, now in good order and little mutilated, are to be restored, in a sense frequently applied to them, which consists in giving new detail, new elaborations, and incongruous finishings, making material alterations and additions, so as to present a clean and highly-varnished appearance when perpetrated; but really so altered, amended, and defaced, that one so treated can never be itself again. This is by no means restoration, but a tampering and mutilation of a most debased kind, discovering a poverty of resource and an entire want of sympathy with the spirit of the old buildings and their devisers, much to be deprecated. Happily such cases of ruthless vandalism are becoming less frequent as a more extended knowledge and appreciation of these quaint monitors are spread abroad.

Generally, then, antiquities deserve our high consideration and respect, as matters of thought, as evidence of history, and the condition and customs of past times,—as sources of design, for their value, for their peculiarity, for their rarity and beauty. Each and all are reasons for pursuing their study and investigation, improving the mind of the student, and conducing to the intelligent pursuit of ancient lore.

Thomas Goodchild.

THE SHAKSPEARE MEMORIAL.

The meeting of the General Committee, held on Monday last, and presided over by the Duke of Manchester, passed off most satisfactorily, the greatest unanimity prevailing. The Site and Monument Committee in their report, which was read, advised, first, that the Shakspeare memorial be a work of monumental art; and secondly, that measures be taken to endeavour to secure a site for this memorial in the Green Park, on the high ground fronting Piccadilly. It was signed by the Right Hon. Wm. Cowper, M.P., Chairman; the Duke of Manchester; Sir Joseph Paxton, M.P.; William Tite, M.P.; T. L. Donaldson, President of the Institute of British Architects; F. Yates Hurlstone, President of the Society of British Artists; W. Hepworth Dixon, F.S.A.; Daniel Maclise, R.A.; Clarkson Stanfield, R.A.; David Roberts, R.A.; J. O. Halliwell, F.R.S.; George Godwin, F.R.S.; Henry Ottley.

On the motion of the Right Hon. W. Cowper, M.P., seconded by Mr. W. Tite, M.P., who both made effective speeches in support of the report, it was unanimously received by the meeting.

On the motion of Mr. Godwin, seconded by Captain Knollys, it was unanimously resolved,—

"That the recommendations of the Site and Monument Committee be printed for circulation among the subscribers, and that the following members of that Committee be solicited to act as an Executive to bring the matter fairly before the public, appeal for subscriptions, obtain designs, and hereafter report to this Committee the steps they have taken towards carrying into effect the wishes of the subscribers:—The Duke of Manchester, the Right Hon. William Cowper, M.P.; Sir Joseph Paxton, M.P.; William Tite, esq., M.P.; J. A. R. Beresford Hope, esq.; D. Maclise, esq., R.A.; and Professor Donaldson."

Mr. Stirling Coyne brought up a very satisfactory report from the Dramatic and Entertainment Committee; and Mr. Banks and Mr. Tomlins communicated their belief that the various trade societies of the metropolis would lend their aid in an efficient manner to the project in hand,—a statement that gave much gratification.

Mr. Benjamin Webster, Dr. Westland Marston, Mr. Hurlstone, and others, took part in what was altogether a most successful meeting. All who are willing to aid should now subscribe at once, so that the Committee may be quickly enabled to form some idea of the sum that will be available.

THE HEALTH OF PRINTERS.

We are glad to hear that, by an order from the Privy Council, Dr. Smith has been deputed to make inquiries respecting the health of this valuable body of workmen, who have for long suffered much beyond the average amount of ill health, and a far too large death-rate. We have at several times directed attention to this very important subject, and expressed a strong conviction that it is in a great measure owing to the overcrowded and badly ventilated apartments in which many of the compositors work, that the excessive death-rate from fever, cholera, consumption, and so on, arises. We could, even now, direct attention to printing-offices in which there are neglected and offensive closets, and such other unsanitary arrangements, that to work under their influence and enjoy good health is next to an impossibility. Besides this, in the consideration of this question, there are other matters to be thought of, such as the sedentary nature of the employment. When Benjamin Franklin worked as a journeyman in the printing-office now occupied by Messrs. Cox & Wyman, he found the labour at the case affected his health, and exchanged it for work at the press. We do not, however, think that there is so much evil in the peculiar position in which compositors have to stand as in the long continued hours of work; and in connexion with newspaper printing, the unnatural, but necessary plan of turning night into day. Careful inquiry would show that the number of deaths in the 1,000 amongst those who work at night is far greater than it is amongst those who labour by day. The very circumstance of being obliged to labour by night instead of day must, to a certain extent, affect health; but the mischief is added to by the closing of windows and doors at night, and thus, in the absence of other means of ventilation, allowing the premises to become filled with vitiated and unwholesome air. No correct idea of the poisonous atmosphere of these places can be formed without a visit at night, when the compositors are in full work and the numerous gaslights are burning. The exposure to night air after leaving these unwholesome and overheated quarters is also injurious; or if the windows be opened deadly draughts enter. During the last few years new printing-offices have been erected upon better plans than the old ones, and various improvements made; and we have heard of instances of the formation, by those who work in the large printing-offices, of clubs, for the practice of cricket and boating. By some of the men engaged in the Queen's printing-office the latter exercise is much and successfully practised, and the plan is well worthy of being more generally followed. As a rule, however, but few printers have time for out-door exercise. Even the Saturday half-holiday is denied them, with one or two creditable exceptions; and, accordingly, these hothouse plants are cut off prematurely by the least blight.

It is not, moreover, the printers alone who suffer, but, as we have before observed, editors, sub-editors, and readers, are often even worse circumstanced, being pent up for hours together, in close boxes, some of which are not very much larger than a full-sized coffin. We all know that the health of newspaper editors suffers as much by the exposure to bad air in the places in which they are for many hours engaged, as by the wear and tear caused to the constitution by the anxiety and worry of their pursuits In any inquiry which is made respecting the health of printers, the condition of their dwellings should not be overlooked; for, in order to be near to their work, they often live with their families in close and unwholesome neighbourhoods, where there is a cause of disease; nor should the inquiry be confined to the Metropolis; for, in the provincial towns there will be found printing-offices which are in a shocking condition, and where the dirt and unsanitary neglects are abominable.

PROPOSED REGENT-STREET AND BOND-STREET ARCADE.

At the usual meeting of the Metropolitan Board of Works on the 12th inst., a report was submitted from the streets committee, which stated that the committee had considered a communication from the Office of Woods and Forests, and several memorials, on the above subject, and had arrived at the following conclusion:—"That in the opinion of the committee the erection of the proposed arcade between Regent-street and Bond-street, as shown upon the plan produced to the committee, would be a public improvement."

Mr. Phillips, in moving the adoption of the report, said,—Taking the whole question into consideration from every point of view, and looking at the increased communication the arcade would give, he considered that it would prove to be a public improvement. There could be no doubt that the removal of a certain class of buildings, by increasing the communication, would be an improvement, and confer a benefit on the neighbourhood.

Mr. D'Iffanger seconded the motion. He was of opinion that the arcade would be a great public improvement. With respect to the objections which had been urged against it, he could understand the opposition of the tradesmen, as it would open other shops; and in reference to the objection that it would be frequented by persons of immoral character, they all knew what the streets of London were, and particularly Regent-street. He did not believe that any im-

proper characters would be admitted, as it would be the duty of the proprietors to keep them out. He had frequently been in the Burlington-arcade, and had never seen anything dreadful there, but he could not say the same of Ratcliff-highway.

Other members having supported the proposition, an amendment to the contrary was proposed; but ultimately the report of the committee, approving of the arcade, was carried, with two dissentients, and ordered to be forwarded to the Office of Woods and Forests.

For ourselves, we may say we do not see the force of any of the objections that have been raised to the proposition. To form a handsome thoroughfare connecting Bond-street and Regent-street, in the place of some property at present not of first-rate description, would surely be a considerable improvement. It would commence in Bond-street, as we understand, between Grafton-street and Barton-street, and open into Regent-street, a little to the south of Conduit-street. Above the shops and their apartments it is proposed to form two extensive galleries for the exhibition of works of fine art. The architect is Mr. C. B. Richards.

THE ARCHITECTURAL EXHIBITION.

WE wish to remind our readers that drawings and other works for exhibition must be sent to Conduit-street by Friday, the 4th of March next.

The committee's last report shows, we are sorry to see, an addition to last year's deficit in the cash account. "The receipts from admissions and other sources were above the average," the report says: "yet the expenses more than counterbalanced them: this arose in great measure from the heavy expense attending the cartoons from Belgium which were exhibited, from a falling off in the annual subscriptions, and also by a loss of rent in consequence of excluding all materials from the great gallery." It is to be hoped that this deficiency will be made up by the proceeds of the forthcoming exhibition.

According to the balance-sheet, the receipts, including dividends on ten shares in the Architectural Union Company, and annual subscriptions and donations, were 444*l.*, while the payments were 486*l.* 12s. 1d., leaving due to honorary secretaries 42*l.* 12s. 1d., besides some 20*l.* unpaid, for printing. We shall hope to see everything set straight by the coming exhibition.

THE LEEDS SCHOOL OF ART.

THE annual meeting of this school has been recently held, in conjunction with the Mechanics' Institution of the town. The report stated that, during the past year, the school had been prosperous in every department; and, in spite of difficulties through want of room for the accommodation of advanced students, the number of pupils in the higher branches were steadily increasing. In the three departments of the school's work, viz., parochial school teaching, the teaching of middle-class schools, and of evening classes for artisans in schools of art and mechanics' institutions, the number of pupils had increased considerably, until the aggregate number of pupils exceeded those of any other provincial school of art. In parochial schools, 5,001 children had been taught, either by the schoolmasters themselves, under Mr. Walter Smith, the head master's superintendence, or by the art teachers of the school of art: 587 pupils of middle-class schools and colleges were instructed, and 348 students had attended the evening classes, during the past year, 1863; making a total of 5,936 pupils taught through the agency of the school. The report also stated that forty-one medals had been awarded by the Government inspector to the Leeds school and two branches which were established immediately preceding the examination of the school; twenty-nine medals being awarded to the central school, and six to each branch class. 570 pupils had passed successfully at the examination of the Science and Art Department: ten students had qualified themselves for free studentships, and five had renewed their free studentships: fifteen had passed the Society of Arts' examination freehand drawing, and taken certificates. This statement, the committee believed, would show that the Leeds School of Art, in the extent and success of its operations, was second to no school in the kingdom. The committee contemplate the immediate commencement of the new School of Art and Mechanics' Institute, to which the Government had made the maximum grant of 500*l.*, subject to certain alterations in the plans, which would be made by the architect. The balance-sheet showed a deficiency of 78*l.*, consequent on the alteration of premises for the enlargement of the present school and the purchase of fittings, which would, however, form part of the furniture of the new school. Upwards of 30*l.* had been distributed in prizes to the students, and the annual subscriptions had increased from 35*l.* to beyond 70*l.* The school altogether was in a most prosperous condition.

ENGLISH AND FRENCH SCHOOLS OF ART.

A SHORT time ago it was announced that several of H.M. inspectors of art schools, and the head-masters of South Kensington, Birmingham, Manchester, Leeds, and Macclesfield schools of art, had been sent by the Science and Art Department to examine the drawings and models of pupils in French schools of design, exhibited in the Palais de l'Industrie, Paris. The gentlemen sent were required to furnish reports on the works, and to compare the French with the English methods of art instruction. It will be a matter of some interest, in these days of agitation on the application of a new code to art schools, to know the opinion of the reporters on the relative position of English and French art education; and we hope that the public will be allowed to read the verdict of experienced men on this point. This will probably be given in the shape of an appendix to the next annual report or blue-book of the Art Department, and must materially strengthen or weaken the case of the Department, in answer to the numerous attacks upon its operations which have been made in various quarters. We look for the appearance of the reports with much interest.

MONUMENTAL BRASSES.

A LECTURE on this subject, as illustrative of early English costume, was recently delivered in the national schoolroom, Moulsham, by the Rev. G. W. Phillips, curate of Writtle. The Rev. A. W. Mason took the chair, and there was a respectable audience.

The rev. lecturer commenced by observing that there was no branch of archæology more interesting to the student than the investigation of the sepulchral monuments of past ages, whether viewed as evidence of costume, or as affording a glance at the arts and customs of former times. He then proceeded to divide monumental effigies into three classes—1stly, those sculptured from stone, or wood, or metal; 2ndly, figures painted on glass or wooden tablets; and, 3rdly, those engraved on flat pieces of metal, and inlaid in stone slabs, termed monumental brasses. Passing over the two first, he confined himself to the last; and, after a few remarks on the character and value of these memorials, some of which for nearly six centuries had preserved their original accuracy of outline and shading, he said the figures represented comprised an almost uninterrupted series of figures of bodies, men in armour, and civilians from the reign of Edward II. to the Reformation. The brasses of ecclesiastics which still exist gave examples of every variety of the habits of the hierarchy down to the reign of Charles I. This was illustrated by a variety of rubbings of brasses from churches in Kent, Sussex, Cornwall, London, and Essex, showing, particularly in the first instance, the costume of ladies in the fourteenth century, as seen in the effigies of the ladies Cobham. The character of armour and its changes, and the habits of ecclesiastics and civilians, were traced and described from the same sources, and are reported at some length in the *Chelmsford Chronicle*. The lecturer then proceeded to trace downwards the various further changes in dress and the armour of the knights to the sixteenth century. In conclusion, he said—"Although the practical study of monumental art is the most luminous and unerring of the illustrations of costumes, we must not be unmindful of those more elevated and awe-inspiring associations which, in every rightly constituted mind, must, I think, be inseparably connected with thoughtful reflections upon the memorials of the dead. The roofs are hallowed which shelter those memorials, and the ground on which we tread when in search for them is holy ground. Let nothing tempt us for a moment to forget the reverence due to scenes and localities such as these." The lecture was listened to with much attention and interest.

THE WATER OF LEITH NUISANCE.

A BILL has been introduced into the House of Commons this Session for the purpose of purifying the Water of Leith, entitled "The Edinburgh and Leith Sewerage Bill." It will, of course, meet with opposition, personal breeches-pocket interests being involved. At a local meeting on the subject, Mr. C. Cowans, who was in the chair, without opposing the Bill, urged the necessity for delay. Mr. A. Fyfe moved,—

"That this meeting is of opinion that the necessity for the Bill for the purification of the Water of Leith should, before it is proceeded with, be investigated; and that the estimates of the expense should be carefully examined and explained to the parties for whose benefit it is said to be intended, and on whom the burden is to be placed."

Dr. Alexander Wood showed at some length the evils of the present state of the water, combated some of the unsound statements made by Professor Christison at the late meeting of the Social Science Association in Edinburgh, and moved an amendment. He said that the Water of Leith had for a long time been a monster nuisance in Edinburgh; that memorials had been sent to the town council by hundreds of residenters against the nuisance, and its evil effects on health; and that this had been testified to by the doctors appointed by the parochial board to attend on the poor in these districts.

Ultimately, however, Mr. Fyfe's motion was carried. One of his supporters, Mr. Henry Bowie, said it would be found, after this Water of Leith Assessment was imposed, that there would be an assessment for a free library, and another for a town hall. The only way for them to prevent this would be to protest against all at once.

Oh, wise Mr. Bowie! He is obviously the man for the ratepayers. Who wants health, increase of knowledge and innocent pleasure, or a decent building for the proper discharge of municipal duties? Not Mr. Henry Bowie, evidently. Don't do one good thing for fear you should then be led to attempt another. That's the way to elevate the people!

HANDBOOK TO THE CATHEDRALS OF ENGLAND.

A FOURTH volume of this work is now issued, and applies to the Western division. It describes five cathedrals, those of Bristol, Gloucester, Hereford, Worcester, and Lichfield,* all of which have undergone extensive restoration and repair during the last few years, under the direction of Mr. Pope, Mr. Waller, Mr. Perkins, and Mr. Scott. The volume contains 325 pages of letterpress, and 51 engravings. Of the latter we give some examples, being kindly enabled to transfer to our pages three, illustrating Bristol Cathedral and precincts,—namely, a general view of the building from College-green;† the Choir, looking east; and the south side of the Gateway. Up to 1542 the cathedral had been the church of an Augustinian monastery, founded by Robert Fitzhardinge in 1142. Additions were made in the Early English period, and sometime between 1306 and 1332 the Norman choir gave place to that which now exists. The central tower is called the work of Abbot Newland, between 1481 and 1515. Soon after the last date the nave was taken down, with a view to rebuilding, but this was never done: the cathedral terminates with the transept, shown in the view.

The great east window seen in the choir contains some fourteenth-century glass, of good character.

"The window represents a stem of Jesse. The lower lights contain figures of the Virgin and Infant Jesus, as well as prophets and kings; in several of which figures portions of the original glazing may be observed. Each figure is enclosed in an oval panel, formed by the ramifications of a vine-branch. Some of the foliated scrolls in the heads of the lower lights (which are principally original) are remarkably graceful in design. The ancient ruby ground of the scrolls is enriched by the unusual addition of a diaper pattern. . . . In the three upright lights above are the crucified Saviour, the blessed Virgin, and St. John the Evangelist. Original parts of all these figures remain.

In the upper tracery-lights is a display of heraldry, of singular excellence, by the aid of which we may perhaps venture to refer the date of the glass to the latter part of the reign of Edward II. The absence of Gaveston's arms from the window proves, I think, conclusively that the glass was put up after the murder of that favourite in 1312; and the presence of the

* Handbook to the Cathedrals of England. Western division. With illustrations. London: John Murray. Oxford: J. H. & J. Parker. 1864.

† See p. 129, *ante*.

BRISTOL CATHEDRAL.

CHOIR, LOOKING EAST.

SOUTH SIDE OF GATEWAY, COLLEGE GREEN.

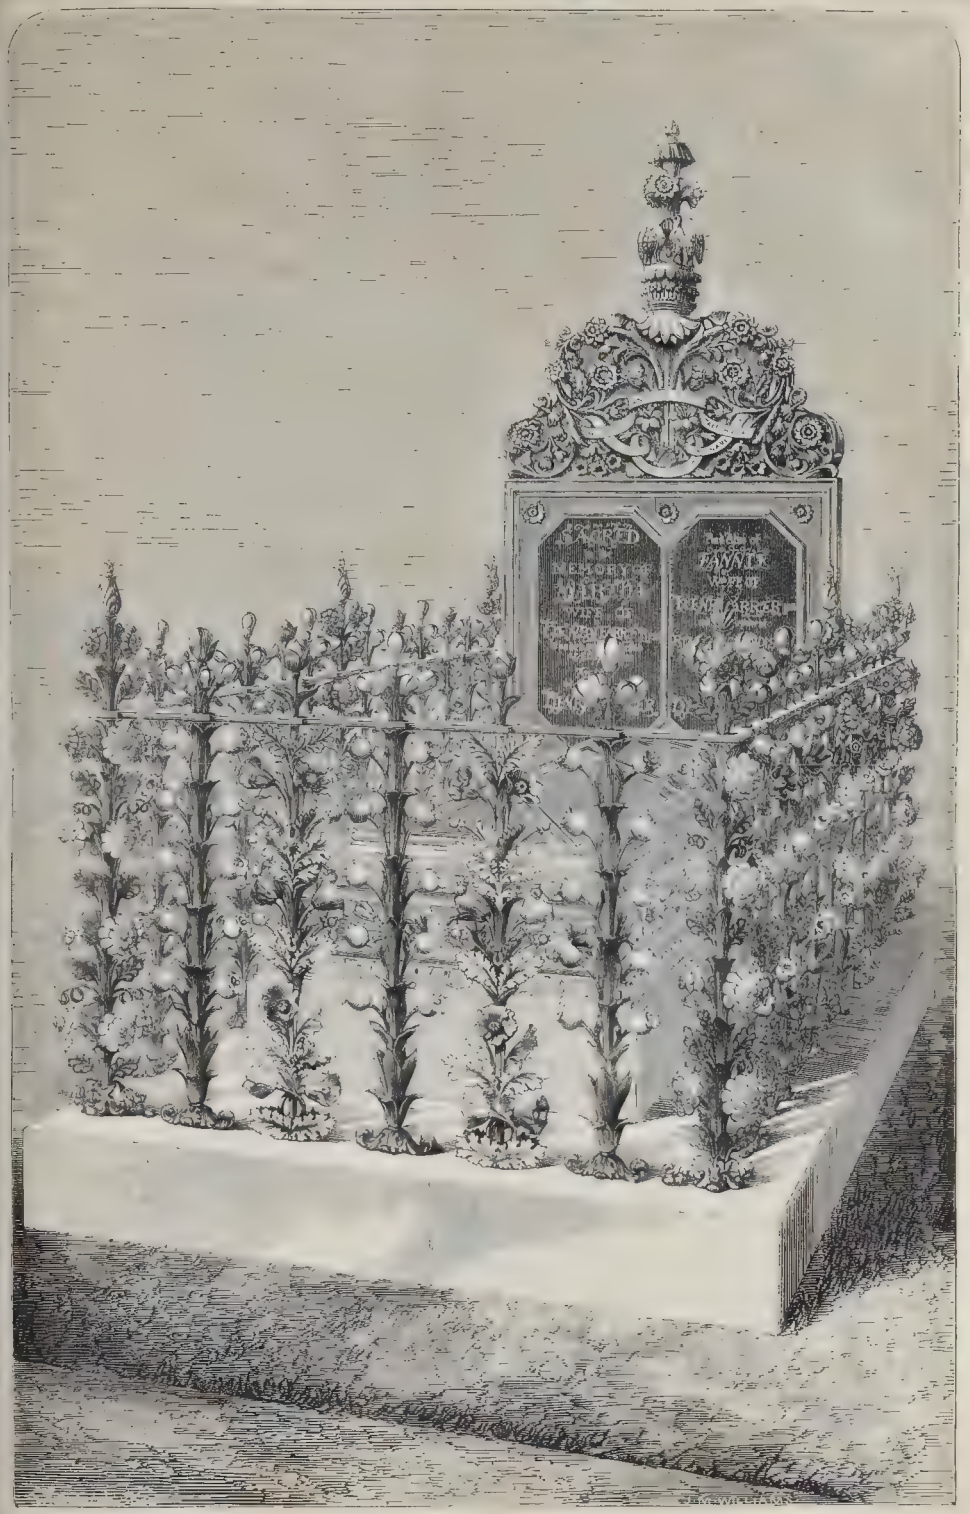
Earl of Hereford's arms appears to afford some evidence that the glass was put up before 1322, in which year Humphry de Bohun, Earl of Hereford, was slain in open rebellion against his sovereign. . . . . The royal arms of England—the three lions on a red field—of course have allusion to the sovereign; and the *fleur-de-lis* border to some of the lights may be well supposed to have reference to the French ancestry of Queen Isabella."*

The four side windows of the chancel are filled with very rich and interesting ancient glass, of the same date and character as that in the east window. The glazing of these windows, until the late restorations, was in much confusion. It has accordingly been re-arranged, and missing portions are supplied. The subjects vary, and are not to be ascertained with certainty. The first window from the east, on the north side, contains merchants' marks, and was therefore in all probability the gift of a Bristol merchant. All the windows (including the eastern) were restored and rearranged under the superintendence of Messrs. Bell, of Bristol.

The reredos below the east window, which has been gilt and coloured, is partly of modern construction, and dates from 1839, when a frightful Corinthian structure of wood was removed. The two arched recesses at the sides are, however, ancient. Above these recesses (the backs of which have been covered with a rich diaper) are corbel-heads and shields of arms, probably those of the first and second Edward, Berkeley, and De Clare. The modern altar, a table of carved wood, stands entirely unvested, in front of the central recess.

The Chapter House is a well-known fine example of Transition Norman work, dating probably from the middle of the twelfth century. The gateway on the Green may be attributed to the same date; the upper part belonging to the Perpendicular period. The mouldings and enrichments of the lower portion are in a remarkably sound state; and this, coupled with some peculiarities in the design, has led to the supposition that the Norman work was rebuilt at the time the Perpendicular work was added. Such a proceeding would have been so contrary to the usual course at that time, that it is not easy to accept the idea.

The central tower of the cathedral, and other parts externally, are understood to be in a very bad state, and to require the expenditure of a large sum of money.



The author of the Handbook is Mr. Richard John King, who exhibits the merits of brevity and clearness. The illustrations are executed by Mr. O. Jewitt. We can cordially recommend the work to our readers.

TOMB OF THE LATE MRS. FARRER.

THE tomb of the late Mrs. Farrer, of which we give an illustration, is about to be placed in the cemetery at Finchley. It is amongst the most elaborate modern specimens of its class. Mr. Henry Shaw, by whom it was designed, has endeavoured to convey, in a conventional form, the tastes of the deceased lady, who was passionately fond of flowers; and he has, in the richly-wrought iron railing, brought to his aid the lily and the poppy,—emblems of innocence and sleep. The whole of the railing is brightly coloured with reference to nature, and gilt.

The tomb itself is of Portland stone, raised, and coped at the top, with mouldings in the form of a Latin cross, the four outer points of which are enriched with cabuchons of crimson china, while the intersection of the arms of the cross is marked by one in blue. The panels formed by the cross are filled with grey serpentine marble. The mouldings on the base of the tomb are carved: one is enriched with lilies interlaced with true lovers' knots, exceedingly well chiselled. The head-stone bears inscriptions in memory of Mrs. Farrer and her daughter-in-law, in oblong octagonal panels, surmounted by sculptured scroll-work, composed of flowers, and a label, on which is inscribed from the funeral service, "The Lord giveth, and the Lord taketh away, blessed be the name of the Lord." Within the label is a butterfly, the emblem of eternity. Above all rises a cluster of foliage, under which are three pairs of turtle-doves, emblems of love. The stonework has been well executed by Mr. J. Perrior, of New-road, Hammersmith, and the wrought-iron work by Messrs. Hart & Son, of Cockspur-street. At present the tomb may be seen at Mr. Perrior's.

* Winston.

TOMB OF THE LATE MRS. FARRER.—DESIGNED BY MR. HENRY SHAW, F.S.A.

THE METROPOLITAN RAILWAY ORGANIZATION.

THE House of Lords have agreed to meet the views of the House of Commons, with respect to a joint committee of five from each House, to consider as to the various schemes for intersecting the metropolis with railways. In the course of the discussion on the subject in the Lords, the Earl of Derby said he would take that opportunity of presenting two petitions on this subject, one from the Royal Institute of British Architects, the other from the Architectural Association, in which they represented the great inconvenience that would arise from a conflict of railway interests. They also observed, that no adequate street thoroughfares had been proposed, and expressed their opinion that the question of street communication should be first and forthwith considered and determined, and that lines of streets, more especially with reference to railway termini, should be laid out. They suggested that all railway projects should be postponed until the question of great leading thoroughfares should have been considered; and they prayed that a committee or a commission should be appointed on the subject. His lordship also remarked, that he thought that the Government ought to have taken a more active part in the matter, and to have laid out what appeared to them to be the best general scheme for railway traffic through the metropolis, without reference to this or that company; considering only the convenience of the public. He was of opinion that some such scheme should be provided; and that, imitating the French system, there should be a concession from the Government to carry on the scheme proposed. This, no doubt, would be a great innovation upon our present practice; and with respect to other parts of the country he would not have suggested it; but as to the metropolis, he thought it would be better that one governing mind should be applied to the question.

A supplementary report of the Board of Trade on the metropolitan railway schemes, more of an engineering character than the previous report, has been made by Colonel Yolland. It is much in harmony with the various previous reports already referred to. It states,—

"That the first impression created by an examination of the various plans is one almost of perplexity, having reference to the extreme difficulty of offering any opinion as to the manner in which such a number of Bills, involving so large an amount of capital (33,000,000*l.*, proposed to be raised by shares, in addition to upwards of 10,000,000*l.* by loan), and limited to so small an area as the Metropolitan Railway district, with lines interlaced in an extraordinary manner, can be best examined and dealt with. The most important schemes are for the proposed construction of outer and inner circles of railways, or portions of them; for the connexion of the northern and southern railways, both on the eastern and western sides of the metropolis; and for the construction of other lines penetrating into London either for the purpose of connecting existing railway termini or for establishing more appropriate terminal stations for some of the main lines. A glance at the map of the proposed schemes for the Metropolitan Railway district will suffice to make it apparent that the greater portion of these schemes are prepared for the carriage of traffic in an east and west direction,—in the line, in fact, of the greatest amount of traffic in the metropolis."

This purpose, the report points out, is already to a great extent effected.

Theoretically, the most perfect system of railway communication for the metropolis, continues the report, would consist in the establishment of radiating main lines directed to one focus or centre; but the impracticability and inexpediency of such a system of lines has long been apparent, and the great companies approaching London in various directions have for many reasons established their terminal stations outside the most closely-peopled parts of the metropolis, and there they should be forced to remain, or at least not be allowed to penetrate within the inner circle.

The report enters into a lengthened examination of the various schemes, and concludes with an elaborate description of their engineering features, the lengths, gradients, curves, and estimated cost; from which it appears that the aggregate length of the thirty-one railway schemes for accommodating the metropolis is about 170 miles.

A pamphlet titled "Reasons for the Immediate Completion of the East London Railway" (Thames Tunnel line) has been issued. This is one of the projects likely to be authorized: at least it proposes to form that junction of the north-eastern and south-eastern lines through the Thames Tunnel which is spoken favourably of in the different reports already made on the projected schemes. The estimated total cost of purchases and works is 1,750,000*l.* The company propose to pay into the Treasury 100,000*l.* in commutation of the Government loan on the Thames Tunnel. An instructive map is published with the pamphlet, which clearly shows the great importance of this link in the ring railway systems of the metropolis, equivalent at the East End to the West London railway at the West End, once called Punch's Railway, but now seen to occupy a highly important vantage-ground as the western link of that inner circle which comprises the Metropolitan Underground to Finsbury, where it would meet the East London, which also joins the Great Eastern, the North of London, the Blackwall, and other lines on the north side of the river; and on the south unites with the London and Brighton, the South London, the South-Eastern, and other lines. Thus, the proposed line from Charing-cross northwards, of which we have already spoken, would, in fact, be an intermediate thread in the network from east to west of the metropolis.

A report on the plans of the various schemes affecting the parish of Kensington, by Mr. James Broadbridge, surveyor, has been printed by order of the vestry of that parish. A formidable number of projected lines are shown to traverse even this one parish, which would seemingly be cut up entirely, were they all to be carried out.

A correspondent of the *Morning Star* proposes that, in those bridges or viaducts which may be allowed to be thrown across metropolitan streets, the piers or abutments, instead of being built so as to be in a line with the fronts of the shops, be set back a sufficient distance to allow of the shops on either side being continued under the bridges. This could be done at a comparatively small additional cost, which would be amply repaid by the value of the site (so reclaimed as it were) when let for business purposes. A communication might also be made between these shops and the adjoining arches of the viaducts at back, which would then afford accommodation amply sufficient for any ordinary purposes.

Whatever lines may be allowed to intersect our metropolitan streets, let us hope that more care than heretofore will be taken to make the viaducts and bridges sightly at least, if not even ornamental in design. There is no absolute necessity that they should in every case be a mere disfigurement, but, in many instances, quite the contrary. The opportunities for a little display are numerous. For instance, on the completed branch of the South-Eastern and Charing-cross Railway, although the line is not more than two miles in length, there are no less than fourteen iron bridges across streets, two iron viaducts on columns, and the immense bridge across the Thames at Hungerford, besides the bridge connected with this line which will take the traffic to Cannon-street, and which has but just been commenced.

At a recent meeting of owners and occupiers in the ward of Billingsgate, it was mentioned that the Thames Tunnel Railway and the Metropolitan District Railway, of which notices have been given to Parliament, would, if allowed to pass, annihilate nearly the whole property in the ward, and that the trade of the City would be greatly diminished in consequence.

There can be no doubt that the metropolitan railways will produce vast changes. Towns and districts have often been injured, but the benefit to the public has, in general, more than counterbalanced such injury; and so it will be in the metropolis, if due care be used: though some will suffer, the multitude will be benefited.

THE BRITISH ARCHÆOLOGICAL ASSOCIATION.

AT a meeting on February 10th, Mr. Nathaniel Gould, V.P., who was in the Chair, called attention to the practice of navvies offering coins for sale as having just been found in excavations, and produced some examples lately obtained by him from a man at Dowgate-hill. Amongst them are two Greek coins, one of Antiochus XII., the other of Syracuse. The remainder were Roman,—a first brass of Aulus Vitellius (an Italian cast of the sixteenth century); a second brass of Caracalla, struck for Perinthus in Thrace, the reverse presenting Hercules and the Mœnalian stag; a first brass of Severus Alexander; and a small Byzantine coin of the tenth century.

Mr. Gunston exhibited several objects lately discovered on the site of the Steelyard, a small steel slider in the shape of a shield,—charged with a doe's head on a wreath, of the sixteenth century; a brass seal, with device as found on merchants' signets of the fifteenth century; and other objects.

Mr. Cuming and Mr. Gunston also produced some examples of Perpetual Almanacs, one of which was of lead, found in 1863 in the Fleet river, and was of the middle of the seventeenth century.

The Rev. Mr. Kell gave a description of the finding of the coffin and glass at Barton, near Bishopstoke station, Hants, detailed by Mr. Baigent at the previous meeting. He also produced a portion of the leaden coffin in a much oxidized state, and a portion of the glass. The subject gave rise to a long discussion, and Mr. T. Wright expressed his opinion that the glass found at Bishopstoke belonged to the Late Roman period, and was probably imported from the Continent. The great glass-works of the Late Roman period appear to have been on the banks of the Rhine and in the north of Gaul, and they seem to have been continued into the Frankish period. In answer to an inquiry made by Mr. Pettigrew as to the discovery of a leaden coffin in Saxon graves, Mr. Wright thought one had been found at Osengall, in the Isle of Thanet. It was regarded as an interment of a very late date, and as a proof of the continued existence in this island of a mixture of Saxon and Roman population. The Rev. Mr. Kell exhibited a light-coloured celt, lately found at Botley, Hants, not unlike in colour (probably derived from the gravelly soil) to specimens from the same county, preserved in the British Museum. Various other exhibitions were made and discussed.

THE NEW PATTERNS IN WALL PAPERS.

SIR,—No one can pass up Regent-street without observing the new paper and chintz patterns recently imported from France: they are founded on Japanese principles. In colour they are very inferior to Japanese work, being of the usual foggy grey French colouring. The old English chintzes reprinted by Clarkson are very superior in colour, as also the wall-papers by Arthur. But a great principle is gained. We were in danger of being wholly eaten up with geometrical design. Diapers are very good in their place. But geometrical flowers, plants, and leaves are to my mind abortions in art: a geometrical flower even in idea is monstrous.

These Japanese patterns are the most Gothic things we have had. The birds and the trees are quite Gothic in feeling; really natural and good. The reprints of the old English blocks are quite pictures, admirable in colour.

A. M. W. X.

DESTRUCTION OF "INSECTS."

REFERRING to an inquiry of a correspondent on this subject, I am happy to be able to say that I have considerably abated the nuisance arising from emmets in my house, and think that probably my experience may be useful to him.

I consulted a friend, a member of the Entomological Society, but he was unable to give me any assistance beyond the recommendation to pour boiling water upon them: this was impracticable, as they issued from minute cracks which no water could reach, without considering the inconvenience of such a thing.

I was unable to procure the powders which you named, but used a powder called "Dumont's Insect Destroyer," contained in hollow india-rubber balls, having a small wooden nozzle-piece, by which one can puff the powder about.*

In one place where I laid it,—the surbase moulding in a dining-room,—the insects were killed a hundred at a time. I pushed the powder into the crevices from which they issued, and after letting the powder lie about for nearly six weeks, I am now able to remove it, and for three weeks have seen no trace of an emmet in my dining-room.

They are not altogether removed from the kitchen; but even there, I understand, they are seldom seen.

In reference to their origin, I am told that they are in the soil, and my entomological friend told me they were introduced with the wood the house was built with; but I think both improbable.

My predecessor occupied the house twenty-

* Dumont's puff ball powder is just one of those pyrethral powders of which we recommended a trial. They are said to be safe to use for all but insects.—ED.

four years, and they only appeared about five years ago. My landlady herself occupied it several years previously, when, no doubt, if these had been the causes, they would have before appeared. My own idea is, that they have been introduced in flower-pots or in some other such way. Y.

DESTRUCTION OF LEAD.

In 1861, I had a 300-gallon lead cistern put up for house-supply. It was specified to be 5lb. lead for the sides, and 6lb. for the bottom.

It had been in use only two years when it began to leak. On examination the bottom was found to be eaten in circular depressions spotted irregularly over the surface, some parts being almost free from, others thick with, spots. There was a little white sediment dotted about, but not much. The sides were free from either sediment or spots. Some of these depressions must have permeated the lead and caused the leak.

Will some of your correspondents kindly tell me what the cause and remedy are?

1. The locality is high ground, on the Hastings sandstone. There are in the valleys mild chalybeate springs; but the water in question is perfectly pure to the taste. It does not "fur the kettles." Can the lead be in fault in point of quality or thickness? It seems a marvellously short time, even for the most active of waters, to eat through it.

2. What am I to do? Must I make up my mind to rebottom the cistern every two years? Is there nothing I can coat it with? Sulphur would, I am afraid, be decomposed if there be iron in the water. Or must I have recourse to an iron or slate cistern? S.

*** While a remedy is being considered, give up the use of the water from the cistern.

SUBURBAN NUISANCES.

We have succeeded, to a considerable extent, in lessening the nuisance connected with huge depositaries of dust and other refuse in the immediate neighbourhood of large populations. Still, the spots where the dust is sorted should be carefully watched by the parochial officers of health. In parts of the metropolitan suburbs the danger arising from the mismanagement of these places is considerable; and, from a case which has been recently brought before the public notice, some idea may be formed of the nature of these heaps, of which we have given several illustrations. At the Hammersmith police-office, Mr. Laws, the occupier of land at Acton, answered to a summons of the Acton Nuisances Removal Committee, by whom the proceedings had been very properly taken. From the evidence it appeared that the defendant had deposited a number of the carcasses of pigs (which had been brought from the Potteries a spot where these animals should not be allowed to be kept, except at the legal distance from any dwelling), together with shell-fish, and offal, in a heap on a field at a short distance from the public footway and houses. The stench from the place was insufferable, and caused nausea to persons passing, as well as low-fever to the inhabitants. Mr. Burge, the medical officer of health for the Fulham district, who had been called in by the committee to inspect the heap, gave evidence as to its being most injurious to health; and said he would recommend that it should be covered with a layer of earth and one of lime. A person living near the spot complained of the nuisance, and said that his wife was continually suffering from diarrhœa. Another inhabitant complained of the nuisance, and said his family had been suffering from low-fever. He also said that the bodies of four bloodhounds were lying in the path close to the heap, and the smell was so bad that he was obliged to remove.

The defendant said that it was a common manure-heap, and the reason it had not been deposited further into the field was that the road was bad. As soon as he had received notice that it was a nuisance, he had it covered over. The magistrate thought that the best course would be to allow the heap to remain, and cover it over with lime: there would, however, be danger in re-opening such a collection at some future time. The defendant said that he was ready to do what was required, for he was aware that it was a nuisance; but if it were not for such persons as he and others, who carried the dead pigs away from the Potteries, he did not know what the parties could do with them. The magistrate said that the bodies of diseased animals should be buried, although he was aware that they were of more use as manure; but the defendant could not be allowed to perpetuate a nuisance: he, therefore, ordered the payment of 40s. and costs.

There can be no doubt that these foul collections are often the cause of sudden outbreaks of fever and other pestilential complaints, which, in some instances, cannot readily be accounted for. It is to be hoped that, before the warm season approaches, the suburban officers of health will make vigilant inspection, and prevent such accumulations as this to which notice has been directed.

EGRESS FROM THEATRES ON ALARM OF FIRE.

The unparalleled calamity in Chili has excited renewed attention to the question of exits from theatres, churches, and other public buildings in cases, of panic, whether from fire or from any other cause. And considering that there is another source of danger added to those which have heretofore prevailed, as was proved at St. Iago, where the swelling skirts and crinolines of the women warped the whole mass into an inextricable network of mutual entanglement, the question is now a more urgent one than ever. The subject has just been brought under notice in the House of Commons, on a question by Sir W. Fraser put to the Home Secretary, whether licences would be granted by the Lord Chamberlain to theatres in which no adequate provision was made for escape in case of fire. There were metropolitan theatres, he said (rather exaggeratively, perhaps), in which there was not a chance of half-a-dozen people escaping, in case they took fire. In reply, Sir George Grey said he considered the subject one of great importance, and affecting all buildings in which great multitudes of people assembled. The practice of the Lord Chamberlain was to make the licences annual, so that he had power periodically to withhold the licence in case sufficient precautions to afford escape for the public in case of fire were not adopted. He believed that the means of egress were at present much greater in theatres than in any other public buildings to which people resorted in large numbers. The doors were all swinging doors, opening each way, and thus the great danger arising from doors opening inwards only was avoided. Some difficulty arose from the narrow frontage of many of the old theatres; but with regard to new theatres, the Lord Chamberlain required, before the licence was granted, that plans should be submitted to him for his approval, and he invariably refused a licence in any case in which he did not think the means of egress were sufficient. The attention of the Lord Chamberlain continued to be directed to that important subject, and he (Sir Geo. Grey) hoped that ultimately adequate means would be provided for the safety of the public in all buildings under the superintendence of the Lord Chamberlain.

The provinces are moving in this generally interesting question, as at Birmingham. The editor of *Aris's Gazette*, in reviewing the theatres and other places of public assembly there, points out various serious defects which ought to be remedied.

In respect to accidents from fire in theatres, Sir George Grey, in replying to a question on the subject by Mr. W. Ewart, said that the Lord Chamberlain considered it inexpedient to attempt to enforce any particular measures by Act of Parliament.

CHURCH-BUILDING NEWS.

Spalding (*Lincolnshire*).—The committee have published a list of subscribers to the Church Building and Restoration Fund. The amount already subscribed, from eighty-four subscribers, is 8,475*l.* 4*s.* The amount required is 10,000*l.*,—5,000*l.* for restoring and repairing the church, and 5,000*l.* for building a chapel of case.

Ketton (*Rutland*).—The chancel of Ketton church has been restored, and re-opened. The architect employed was Mr. Jackson, of London. The Rev. F. H. Sutton has presented an east window of triple form. There are three lights to the window, and they contain nine subjects, illustrating the Passion, Death, Resurrection, and Ascension, of our Saviour. Mr. Sutton designed the window, and executed the painting on the glass. There is also a vesica of stained glass, containing the figure of the Saviour in glory. There are other improvements, but the work of restoration is scarcely complete. New tiles are required for the floor, and an unsightly flaw over the chancel arch needs attention. A sacristy or vestry is also wanting. The stonework has been presented by Messrs. Swingler & Percival, and the masonry was executed by Messrs. Halliday & Cave, of Greetham.

Reading.—The first stone of the new church of St. Stephen has been laid. The style is Geometrical, and the edifice is to consist of a large chancel, arranged for a choir, with north chancel aisle and vestry, nave and north aisle, and north porch. A bell gable at the west end, to carry two bells, is designed for present use; but space is left at the north-west corner of the church for a future bell tower. There is likewise room left for the extension of the church itself on the south side. The building is to be of brick, with moulded arches and labels generally, the windows being filled with tracery of Bath stone. The roof will be of deal, open framed, and covered with tiles; and the interior will be furnished with open benches, the whole being open and free to all comers. The brickwork will be somewhat relieved by bands of grey and pattern of buff bricks, chiefly in the upper part of the walls. The shafts of the nave arcade will be of Devon polished marble. The floor will be laid with paving tiles, and the floors of the seats with wood block. The present accommodation is for 400. The contract was taken at 1,600*l.*; but some further works in the better finishing of the structure have been since proposed, and it is hoped that further funds will still be forthcoming for specific purposes, such as pulpit, font, reredos carving and painting, and other decorative works, before the building is completed. The architect is Mr. William White. The builders are Messrs. Wheeler, of Reading. The sub-contractor for carpenter and joiner's work is Mr. Jas. Matthews, of Reading.

Sutton (*Surrey*).—The consecration of the new parish church of St. Nicholas, at Sutton, in Surrey, by the Bishop of Winchester, was celebrated on the 16th instant. The new structure has been erected by subscription upon the site of the old, which was a small dilapidated half-modern building. The work commenced as an enlargement, but, by the liberality of the inhabitants and others, this soon grew into an entirely new church. It consists of a shingle-spired western tower, opening by an arch into a nave with a quadruple-arcade on each side, and gabled aisles; a chancel with gabled aisles, the south side being double-arcaded on coupled Cornish marble columns; and porch on the south side, chiefly of oak on stone walls. The roofs are open timbered, and tiled. The walls are faced outside with split flints and Bath stone dressings, and plastered inside. The style is Gothic, of the thirteenth century transition type; the window tracery being simple, the east window large, and of five lights. The font is of Caen stone, and is square, with shafts at angles. The pulpit is circular, and of stone, with Devonshire marble shafts and large foliated cap, carrying the drum, on which are carved the evangelistic emblems. A marble shafted arcading and carved cornice run round the top. All the columns in the building have capitals carved with Early English foliage, executed, with the other carving, by Mr. L. Jaquet. The design and direction of the works were by Mr. Edwin Nash, of London, architect, who has introduced a somewhat novel method of gas-lighting by metal screens on each side of the chancel, and by rings of light above the capitals of the nave columns. Messrs. Peard & Jackson executed the metal work. The contractor for the building was Mr. Alfred Deards. The seating is for nearly 700, and the cost has been about 6,000*l.*

Higham (*Kent*).—The church of St. Mary is being restored by the executors of the late Mr. George Lake, who restored the south chancel window, and have inserted stained glass. The subject of this memorial is, "The Agony in the Garden." The vicar, the Rev. Joseph Hindle, has restored the east window, and filled the same with stained glass, to the memory of some deceased members of his family. Nine life-size figures occupy the three lights. The work of restoration having been thus set on foot, the parish have taken it up. The walls are being recased and buttresses re-built, the masonry of the last century demolished and replaced by work harmonizing with the original building: a porch and vestry of Mediæval design have been

added; a new altar and altar-rail, and pavement of Minton's encaustic tiles in the chancel and sanctuary. The architect's wife has worked and presented to the church an altar-cloth. Much has been done, but more remains to be done: the new tower and spire, for which drawings have been prepared, are yet to be built. The architect is Mr. Robert Speechley, of London, who has superintended the works.

Blandford-Forum (Dorset).—Blandford St. Mary Church, enlarged by the addition of a new transept and aisle, has been re-opened for Divine service. The new part of the church has been erected by the widow of the late Sir John Wyldbore Smith, bart., of the Down House, as a memorial of her husband. The work originally planned has led to various improvements in the rest of the structure. The gallery has been removed, and an arch in the tower has been thus brought to view, which had been before buried in plaster. The interior of the tower itself has been fitted with seats for the school-children, who are also to occupy a portion of the new aisle. All the new seatings are of oak. The work is in the Perpendicular style, to correspond with the chancel, with the exception only of the tower, which is the only portion of the old building retaining any architectural character at all. The latter has been repaired, by ribbing the ceiling with wood, retiling the roof, and replacing the east window by one filled with stained glass. This was supplied by Messrs. Heaton & Butler. In the centre light is a figure of the Good Shepherd folding a lamb in his arms: on the left is a representation of the Nativity; and on the right, our Saviour blessing little Children. In the quatrefoil light above there is an angel bearing a scroll. A new vestry has been added on the north side of the chancel.

Manningford Abbots (Wilts).—The little church of this parish having been almost entirely rebuilt has been re-opened for Divine service. Two years ago the rector rebuilt the chancel, and since then exerted himself to raise the necessary funds for the restoration of the whole fabric. In place of the old dilapidated building, a new church has been built on the old foundations, and consists of nave and chancel, with south porch. The bell gable at the west end is hung with two bells. The parts of the old church which remain are an Early entrance doorway and the chancel arch. In the chancel the ancient piscina is retained in its former position. The restoration has been carried out in the Early English style, from the plans and under the superintendence of Mr. S. B. Gabriel, of Bristol, architect.

Stafford.—A meeting of gentlemen interested in the proposed new church for Castle Town was recently held, when the incumbent of St. Paul's explained that they had about 400*l.* available for the erection of a church, and it was proposed that they should build a permanent chancel, to which a wooden church could be fixed, capable of holding 400 persons, and which might afterwards be replaced by a permanent nave, which, with side aisles, would accommodate 700 persons. To build the proposed temporary nave and permanent chancel 200*l.* more would be necessary. The meeting was adjourned.

DISSENTING CHURCH-BUILDING NEWS.

Stafford.—The new Wesleyan chapel here has been opened for divine service. The structure occupies the site of the old chapel. The new edifice is Romanesque in style, and provides nearly double the accommodation of the former one. It is 55 feet long and 45 feet wide. The plan consists of a nave and side aisles. There are three distinct entrances from the street; the central approach consisting of a covered arcade, and communicating with the two side or gallery entrances. The principal facade has a central gable, pierced with a large wheel window of stone, the aisles being of lower elevation. That next the minister's house abuts on a square tower or campanile, which projects from the main building. The tower is about 80 feet high, rising above the main gable or clerestory, and is crowned with a pyramidal roof and metal vane. The tower incloses a stone staircase, which affords access to the gallery; and on the opposite side of the arcade is a corresponding staircase, but of semicircular plan, the roof of which is the same height as that of the aisles. The roof of the main building is of a comparatively flat pitch, and is slated: that of the tower is of red and green slates, in checkered bands. The side windows are circular-headed, the voussoirs being of blue and cream coloured brick, the arch slightly widening from the spring to the apex. The clerestory, which affords the main source of light, is pierced with windows disposed in triplets. This portion of the edifice rests on a continuous bressummer, superimposed on light cast-iron pillars, relieved with large arches, these features being exposed to view from the interior, the bressummer being wrought and ornamentally moulded, and the arches having moulded labels. The exterior of the building is faced with red pressed bricks, relieved with blue and straw coloured bricks, and stone in string-courses, variegated bands, &c. The interior of the chapel is simple in character, the roof and galleries open timbered, with ceilings of plaster beneath the subordinate spars. The pulpit takes the form of a rostrum. The whole of the woodwork is stained and varnished. The iron columns are painted chocolate, the caps being gilt and relieved with other colours. The gas standards were supplied by Messrs. Thomason, of Birmingham. The building is heated with hot air, on Redfern's system. There is accommodation for 730 persons, including about 200 free sittings. The whole cost of the building, including fittings and fence, will be about 2,400*l.*, exclusive of land and the value of the old materials. The building was designed by Messrs. Hayley & Son, of Manchester, architects. Mr. William Moss, of Stafford, has completed the works.

Bradford.—The foundation-stone of a new Independent chapel has been laid in the Wakefield-road. The building will contain a chapel, capable of seating 500 adults, and school and class rooms for 340 to 400 children, with vestries and other apartments. The school-rooms will, for the present, be included within the chapel walls, and sufficient ground will be left for the erection of a new school building hereafter behind the chapel. The chapel is to be 45 feet wide, clear, and have side and end galleries, and will be equally complete in its limited size as when enlarged to accommodate 800 persons. Owing to the nature of the ground, the front entrances are designed as wings to the main building, so as to economise space within the chapel. The style of the building is Italian freely treated. The interior will possess features in keeping with the exterior, the constructional timbers, &c., being made to appear as parts of the design. The whole building will be warmed with hot water, and ventilated by an extraction shaft in connexion with internal flues in the roof. For the erection of the chapel and schools 2,100*l.* have been obtained in contributions, the expected cost being 2,600*l.*

Scarborough.—At a meeting of gentlemen from several towns in Yorkshire and Lancashire, Mr. Lockwood, of Bradford, submitted plans of a Gothic church for the Independents of this place, capable of holding 1,000 persons, or, with the addition of galleries, 1,200, the estimated cost of which, with the ground, is 9,000*l.* The site is on the south side of the town, near the Esplanade. A committee has been formed, and subscriptions were announced at the meeting.

SCHOOL-BUILDING NEWS.

Malvern.—A new company, under the title of "The Malvern College Building Company," has lately been formed, the object of which is to assist in completing the buildings required for the efficient working of the new college, and foremost among which are the boarding-houses for pupils, two of which, with residences for assistant masters attached thereto, are about to be built contiguous to the college ground, at the north-east corner. The two houses will be similar in construction. Externally the houses are to be built of Staffordshire red bricks, with ornamental bands of blue bricks. The window heads, sills, mullions, doors, parapets, &c., will be of Bath stone. The roofs have projecting gables and ornamental barge boards. The chimneys are to be executed in brick with ornamental caps. The style is Gothic, carried out very simply. These houses are to be completed by September, so as to be ready for the reception of pupils at the time the college is opened. The tender of Messrs. Warburton, Brothers, of Manchester, has been accepted for the erection of the two houses, the amount being 7,385*l.* Messrs. Warburton are the contractors for the new college. Their tender has also been accepted for the erection of the head master's residence, at the north-west angle of the college ground, which will be of a more ornamental character, and built of stone to harmonise with the college buildings.

Usk.—The new School-room at the Usk Free Grammar-school has been opened. Mr. Stride, of Cardiff, was the builder. The school building is 40 feet long by 18 feet broad. It is of a Mixed Gothic style of architecture, and, together with alterations in the house of the schoolmaster, cost about 550*l.*

Rhyl.—The foundation stone of British Schools has been laid at Rhyl. The schools will accommodate about about 250 children, and will cost to erect about 750*l.* Mr. F. D. Johnson, of Birmingham, is the architect; and Mr. J. R. Jones, of Rhyl, the builder.

Heighington.—The trustees of Garratt's Charity being dissatisfied with the old school-house or chapel, whose incongruous fittings rendered it unfit for either purpose—a pair of school-globes, for instance, decorating the altar-table, with many other inconsistencies—and, having sufficient funds in hand, determined, with the consent and approval of the Charity Commissioners, to have a suitable building as an adjunct to the old fabric, which should be more convenient for school purposes, and leave the old chapel free for divine worship. The new school-house and class-room, which have just been opened, although only about the same size, will give double the accommodation of the old building. The new building, designed by Mr. M. Drury, architect, is in the Geometric style. It is built of local stone, with Ancaster dressings. The builder was Mr. Barker, of Lincoln. The cost of the work has been about 400*l.* The old building is to be restored under Mr. Drury's superintendence.

Netherbury (Dorset).—A new school has been opened in Netherbury parish. The school for girls and smaller boys was found inconvenient. The new building is in the Decorated style, and consists of a school-room 32 feet by 18 feet in the clear, having three four-light square-headed, cusped, transomed, and mullioned windows. Between the two windows in the front ascends a bell-turret, projecting externally from the wall, and surmounted by an ornamental iron finish, the principal features of which are gilded. The lower part of this turret has been pierced by a one-light window corresponding with those at the sides. In the centre of the back wall of the principal room is a moulded stone archway, about 8 feet or 9 feet wide, with sunk, chamfered, and stopped jambs, leading to the class-room, 10 feet square, lighted by a three-light window, similar in design to those in the school-room. The school is entered through a small lean-to porch at the back, running parallel with the large room, and extending from the gable end until it reaches the class-room wall. The timbers of the roof throughout are wrought for showing the principals. The external walling is executed in local stone worked in random courses, hammer-dressed. The whole of the dressings are from the Hambdon Hill stone quarries. The roof is covered with duchess slate, having stone gable coping, terminating with crosses at the apex. The windows are glazed with diamond quarries, and fitted with Moore's patent ventilators. The whole of the woodwork is stained and varnished. The whole of the works have been executed from the designs and under the direction of Mr. William Chick, architect and county surveyor, Hereford; Mr. J. Chick, of Beaminster, being the contractor. The following tradesmen executed various portions of the work, viz.:—Messrs. Toleman, the staining, glazing, and plumbing; Mr. J. Trask, the Hambdon Hill stone work; and Mr. Sprackland, the masonry. The cost will range between 500*l.* and 600*l.* At a future time it is contemplated to build a new residence for the mistress.

Wolverhampton.—National Schools, recently built, in connexion with St. Philip's Church, Penn-fields, near Wolverhampton, in memory of the late wife of the Rev. W. Dalton, the present vicar of the parish, have been opened. The building consists of a boys' and girls' school-room, each 38 feet by 19 feet. They will accommodate about 200 children. They are built with a view to further extension, and in their erection have cost about 1,000*l.* The site was the gift of the vicar.

Bungay.—The Stradbroke Schools have been opened. The buildings face the road to Hoxne, from which they are separated by the playground intended for the scholars belonging to the lower school. The material of which they are built is red brick, the plainness which would result from the sole use of these being relieved by the introduction of vitrified bricks at intervals. The two school-rooms stand at right angles to each other, forming two sides of a triangle, and the interior is filled by a class-room connected with the lower school, and by

necessary offices. The style which has been adopted may be said to be the Perpendicular English. The gables are ornamented with battlemented steps. The front consists of the side of the upper school, the porch for the use of the children of the lower school, and the gable of the lower school building. The roofs, which are of slate, are crowned with a ridge of small red brick earth Maltese crosses. At the back are the usual offices, and a stable for the accommodation of any boys belonging to the upper school whose parents may reside at a distance. The two schools are kept separate: there are distinct entrances and distinct play-grounds; that of the lower school being in front, whilst that intended for the upper school is in the rear. The roofs, which are of stained wood, are supported by numerous beams, and the extreme height from floor to roof is 20 feet 6 inches; to the collars, 16 feet 6 inches. The dimensions of the upper school, which is intended to accommodate fifty boys, is 47 feet 6 inches by 18 feet, and of the lower school, 60 feet by 18 feet; the class-room attached to the latter being 13 feet square. The architect is Mr. R. M. Phipson, and the builder Mr. Godbold, of Harleston; and Mr. Albon, of London, was clerk of the works. The total cost of the schools has been 838*l.* odd, viz.:—Contract, 645*l.*; cost of land, 90*l.*; fencing, &c., 53*l.* 11s. 5d.; and fittings, 50*l.*: towards this a grant has been made by Government of 157*l.*, and the remainder has been raised by means of voluntary contributions.

Thorne (*Yorkshire*).—The foundation stone of new schools belonging to Travis's Trust Charity has been laid. The architects are Messrs. Brundell & Arnold, of Doncaster; and the builder Mr. G. Armitage, of Thorne.

Bilsdale (*Yorkshire*).—During the past three months, extensive alterations have been made in St. Matthew's Church School, in this village. The roof has been raised, the old windows replaced by larger ones, and the interior made that of a convenient and well-proportioned room. The expense incurred has been about 100*l.*

STAINED GLASS.

Bilford Church (*Warwickshire*).—A stained-glass memorial window has just been erected in this church. The window is a single-light lancet, the lower part being occupied by a large figure of St. John, who appears in the attitude of attention, holding a scroll in one hand, and the ancient stylus in the other, and looking up to an angel in a medallion above. The angel bears a scroll, upon which are inscribed the words, "Write, Blessed are the dead which die in the Lord." The figure-work is set in a coloured grisaille pattern, and the whole is surrounded by a painted border. The artists employed were Messrs. Cox & Son, of London, who have also the corresponding window now in hand.

GAS.

THE Tunbridge Gas Company have just declared a dividend of 7½ per cent.; the Bromyard Gas Company one of the same amount; and the Crowle Gas and Coke Company one of 10 per cent. The price of gas at Llangollen is 7s., and is much complained of, especially as coal is so near and so easily transportable, either by railway or canal. A contemporary thinks that "if more gas were consumed, it is probable that the company would lower their price;" but he does not seem to see that, if the company would lower their price, it is more than probable, not only that more gas would be consumed, but that larger profits would be reaped than now, on what was consumed; neither do the directors themselves appear to see it: yet the uniform experience of years has sufficiently established the truth of this principle in the sale of gas.——The New Romney gas management seems to be alive to it, having again lowered the price of their gas; and, under this management, they have raised their company from a bankrupt state to a state of prosperity, paid off old debts, and yet declare 5 per cent. dividend, where, a few years since, there was no such thing as a dividend at all. ——The Bardfield gas-works in Essex are approaching completion. Messrs. Tice & Co., of London, gas engineers, are the contractors.—— The Malvern Link gas company have declared a dividend of 5 per cent. per annum, free of income tax, for the last half year, and laid aside a balance for their reserve fund. The company has only been two years in existence. The number of private gas consumers is still on the increase.——The Cleethorpes gas-works are nearly completed. The gas will be charged at the rate of 5s. 10d. per 1,000 cubic feet.——The Westerham gas company have reduced their price from 7s. 6d. to 6s. 8d., and declared a dividend of 1*l.* per share, free of income-tax.—— The Redhill gas company's directors have determined still further to reduce the price of their gas from 7s. to 6s., having earned a dividend of 6 per cent., free of income-tax, by their last reduction, besides carrying a considerable balance to their reserve fund.——The workmen employed in building the Burnham gas-works have been treated to a supper by the contractors, Messrs. Manders (engineer), Webb (bricklayer), Cutler (carpenter) and the company, whose employés were also present: there were nearly 70 at table.——The workmen of the chartered gas-works at Westminster have presented their late superintendent, Mr. Evans, with a silver flower-stand on his retirement from his office: there were nearly 497 workmen at the presentation.

Books Received.

The Ancient Mariner. By S. TAYLOR COLERIDGE. Illustrated by J. Noel Paton, R.S.A., expressly for the Art-Union of London, 444, West Strand. 1864.

EVERY subscriber in the Art-Union of London, when he pays his guinea and receives at once a copy of this noble book, must feel that he has already obtained more than full value for his money, and that if he should afterwards gain one of the nine or ten hundred prizes, such as the right to buy from any of the exhibitions a picture worth one or two hundred pounds, or one of the fine bronzes or works in Parian, distributed at the annual meeting in April, this would be clear gain, further added to by tickets for friends to the exhibition of prizes, the right to the society's almanac, a printed copy of the report, and other matters.

The book now issued consists of the complete poem, with twenty drawings of great power by Mr. Noel Paton, to illustrate it. Commencing with the first four lines of the poem,—

> "It is an ancient mariner,
> And he stoppeth one of three:
> 'By thy long grey beard and glittering eye,
> Now wherefore stopp'st thou me?'"

he leads up to the moral of the poem,—

> "Farewell, farewell! but this I tell
> To thee, thou Wedding Guest!
> He prayeth well who loveth well
> Both man, and bird, and beast.
>
> He prayeth best who loveth best
> All things both great and small,
> For the dear God who loveth us,
> He made and loveth all;'

taking hold intermediately of the many prominent pictures presented to the mind by the poet. The third illustration, where "the bride hath paced into the hall;" the sixth, where the mariner is at first thanked for having killed the bird; the eleventh, when prayer causes the Albatross to fall from his neck; the thirteenth, the sixteenth; the nineteenth, where in the

> "Bower, the bride
> And bridemaids singing are,"

and the twentieth, in which "all together pray," are some of the most striking designs in this striking series. This volume alone should command a large subscription for the year.

Miscellanea.

DEATH OF MR. WILLIAM DYCE, R.A. We regret to announce the death, at Streatham, on Sunday last, of this distinguished artist, in the 58th year of his age.

SCHOOL OF ART FOR DONCASTER.—A school of art for Doncaster, under the patronage of the vicar, the mayor, and other gentlemen, is about to open at the town-hall, with Mr. J. C. Swallow, of the York School of Art, as master.

MEMORIAL OF THE PRINCE CONSORT AT ETON.—A movement has been set on foot for the purpose of raising a subscription to defray the cost of an appropriately designed stained-glass window, which it is intended to place in the church of St. John, Eton, as a memorial of the late Prince Consort, who laid the foundation-stone of this building. The memorial will probably be placed in the east window of the church.

SOCIETY OF PAINTERS IN WATER-COLOURS.—From thirty-three candidates, Messrs. E. B. Jones, F. Walker, E. Lundgren, and G. P. Boyce, were elected associates.

THE JOINERS' STRIKE AT ST. HELENS.—Most of the joiners in the town of St. Helens are still on strike. One of the masters, it is stated, has consented to give the advance (2s. a week), but the majority still hold out and are seeking hands elsewhere.

THE LAW COURTS.—In reply to a question in the Commons, the First Commissioner of Works, the Hon. Mr. Cowper, said it was intended to introduce a Bill for the concentration of the courts of law and equity on a site to be purchased between Carey-street and the Strand, in accordance with the recommendation of the Royal commissioners.

THE PUBLIC BATHS AND READING-ROOM AT BILSTON.—The Bilston Baths Company is about to dispose of its plant and dissolve itself. The speculation has proved not alone barren, but a loss. In the November of 1862, the company decided to close the baths altogether, and to keep open only the reading-room, and now they have resolved to get quit of the whole building.

THE DUBLIN RAILWAY SCHEMES.—In reply to a question in the House of Commons by Mr. Vance, whether the President of the Board of Trade would consent to the appointment of a preliminary select committee, composed of members of both Houses of Parliament, to consider and report upon the various railway schemes affecting the city of Dublin, Mr. M. Gibson replied that the Government had no intention to do so.

FREE PUBLIC LIBRARY FOR EDINBURGH.—A meeting, convened by circular, has been held in the Council Chambers, "for the purpose of taking into consideration the requisite steps to be adopted for the formation of a free public library for Edinburgh, on the model of those now in operation in Manchester, Liverpool, Salford," &c. The Lord Provost occupied the chair. Resolutions favourable to the establishment of a free library were passed, and the Lord Provost mentioned that he had spoken to the Government Chief Commissioner of Works while in London as to the purchase of the old General Post-office in Waterloo-place for a free library.

METRIC TABLES.—Mr. C. Hutton Dowling is about to publish a series of metric tables, in which the British standard measures and weights are compared with the metric measures and weights at present in use on the Continent. By various treaties of commerce between our country and the Continental nations, our trade and commerce with them are rapidly increasing. A series of tables, therefore, for facilitating the ready conversion of their measures and weights into those of the British standard, and *vice versâ*, will render service to all engaged with those countries in manufacturing, mechanical, or commercial transactions.

COURT OF COMMON COUNCIL: CITY ARCHITECT, &c.—At another special court of Common Council, the Lord Mayor has stated that he has appointed Friday, the 26th inst., for the election of a successor to the late City architect. The court next proceeded to discuss the subject of the lunatic asylum. The corporation have nearly completed this building, which has been erected at Stone, near Dartford, at a cost of 38,464*l.*, the estimate of Mr. Bunning, the late City architect, being 43,500*l.* The contractors were Messrs. Piper & Wheeler, for the sum mentioned. A committee report recommended that the court should sanction the expenditure of a further sum of 7,000*l.* for laying out the grounds and the fittings. The court then proceeded to discuss some financial questions connected with the new asylum.

THE POLYTECHNIC INSTITUTION.—The ordinary annual general meeting of the shareholders in this institution has just been held. The report of the manager, Professor Pepper, congratulated the shareholders upon the success of the company, owing in a great measure to the attractions of the illusion patent. The receipts for the past year had been 13,000*l.* as against 10,000*l.* in the Exhibition year. The report concluded by expressing confidence in the future prosperity of the institution. The report of the directors paid a high compliment to the exertions of Professor Pepper on behalf of the institution. Since the last meeting the Prince of Wales had consented to become patron of the institution, and in future it is to be called by its original title of the Royal Polytechnic.

Timber.—The consumption of timber in Corn-all approaches 100,000 loads a year, and in-gives an expenditure for Norway timber alone nearly 200,000*l.* Large quantities of American ber are also used, in which it is estimated re is an annual expenditure of 40,000*l.*

Liverpool Architectural Society.—At the t meeting of this Society, Mr. Joseph Boult in chair, it was determined to petition Parlia-nt to refer the railway schemes sought to be ried out in London to the consideration of a yal commission. The papers read were on "Cathedral Church of St. Finbar," at Cork, Mr. Heffer; and also a sketch of the life of chelangelo, by the same gentleman. At the vious meeting Mr. Huggins read the comple-n of his paper on the "Stream of Art."

Public Parks and Gardens.—Windsor Park vers 3,800 acres; Richmond, 2,468 acres; Bois Boulogne (France), 2,095; Hampton Court, 00; Phœnix (Dublin), 1,752; Central (New rk), 850; Kew, 683; Regent's, 478; Kensing-n, 362; Tzarsko-Selo (Russia), 350; Hyde, 289; ctoria, 249; Thiergarten (Prussia), 210; eenwich, 185; Battersea, 175; Green and St. mes's, 60 each. In Southern Europe the st notable public resort is the Villa Reale, in ples. The Bois de Boulogne has a carriage-ive thirty-five miles in length, and the Central rk in New York has one nine miles long.

Telegraphic.—The Electric and International legraph Company's report for the half-year ding the 31st December, 1863, has been issued. e revenue for the half-year amounts to 7,150*l.*, exceeding that of the corresponding riod of 1862 by 20,076*l.* The total expenditure r working charges and interest on debentures nounts to 86,582*l.*, leaving a surplus of net ofit on the six months of 50,568*l.* The direc-rs recommend a dividend of 3*l.* 10*s.* per cent. r the half-year.

Princess's Theatre.—"Paul's Return," by r. Watts Phillips, is an interesting drama rest-g on the shoulders of Mr. George Vining, Mr. avid Fisher, Miss Kate Saville, and Mr. John elson; the last a young actor new to London, ho, if he fight against a tendency to monotony d *for* power of modulating the voice, may ake a position. On certain occasions he showed eling and force. There are several other actors gaged, in the shape of "the family," but these e separated by a gulf from those who really rry out the story, and are not joined on very tistically. Mr. Vining showed the skill of a ractised actor in the part of a "merchant prince," ho under pressure has robbed the orphan and on the verge of ruin, while the world think im a wealthy model of successful integrity. he scenery throughout is very appropriate and ood, but that of the second act, representing a rden with steps, vases, and so on, on the nks of the Thames, and built-up beds of owers, deserves much stronger terms, and laims for Mr. F. Lloyd great praise. Swans float y gracefully; and when the punt lands its occu-nts, the admiration of the audience is at its eight.

The Co-operative Societies of Rochdale.—he Rochdale "Equitable Pioneers' Society" began usiness in the year 1844, just nineteen years ago. consisted of twenty-eight members, with a apital of 28*l.* Six years later its members had ncreased to 600, and its capital to 2,299*l.* The mount of business transacted was 13,179*l.*, and he profit was 880*l.* In 1861 the members were ,900, the capital was 42,925*l.*, the transactions eached 176,206*l.*, and the profit was 18,020*l.* During the year 1862, when the distress in the otton districts became severe, there was a iminution of 400 in the number of members, of ,400*l.* in the amount of capital, of 32,000*l.* in he business transacted, and of 456*l.* in the rofits made. In 1863, however, its members ave risen to 4,013, its capital to 49,361*l.*, its usiness transactions to 158,632*l.*, and its profits o 19,671*l.* The Rochdale District Co-operative Corn-mill Society began business in 1851, with s capital of 2,163*l.*, and the first year resulted in a loss of 421*l.* In 1855 the capital was 4,626*l.*, its business transactions 28,085*l.*, and its profits ,876*l.* In 1861 its capital had reached 29,600*l.*, he amount of business was 166,800*l.*, and the rofits were 10,000*l.* The year 1862 shows ome diminution; but 1863 exhibits a capital f 41,714*l.*, transactions amounting to 152,492*l.*, nd a profit of 10,138*l.* There is also a "manu-facturing company," which has large premises nd a large invested capital.

Improvements in Furnaces.—As an improvement in constructing cupolas and blast furnaces, Mr. G. Bedson, of Glamorgan, proposes to construct a wrought-iron water-chamber round the lining and within the exterior masonry, the water in the said chamber being kept cool in the same manner as the water-chambers round tuyeres are usually kept cool.

The late M. Rondelet, Architect.—The last architect of the Paris Pantheon, Antoine Rondelet, died a few days ago. He was the son of Jean Rondelet, the author of "Traité Théorique et Pratique de l'Art de Batir," and had obtained the place of Inspector of the Pantheon at the time when his father, who was a pupil of Soufflot, its designer, saved it from impending destruction.

Iron Ore on the Estate of the Prince of Wales at Sandringham.—Mr. James Wright, of Lynn, merchant, claims to have made the discovery that, underlying a large tract of the Royal Estate (chiefly the uncultivated portions) is a very valuable and extensive vein of iron ore. It is computed that this stratum covers at least 500 acres, the discoverer believes 1,000 acres, commencing at Wolferton church, and extending inland, past the Lynn and Hunstanton-road. It is computed that the vein averages about 4 or 5 feet in depth, and will yield at least 2,000 tons per acre. Mr. Wright has informed the Prince of Wales, through General Knollys, of his discovery, and is in correspondence with him to work it at a Royalty.

Accidents.—Nineteen arches at Brixton, belonging to the South London Railway, in course of construction to connect the London, Chatham, and Dover Railway with the Crystal Palace and London-bridge stations, have fallen to the ground a heap of ruins. These arches had been finished only about ten days, and the shoring under them had been removed. The sudden change from frost to rain is blamed.——At the works of the new Government offices in course of erection in Downing-street, a tramway lately gave way, and the traveller on it fell and shockingly bruised several of the men.——The third floor of a malting-house at Stanground, near Peterborough, gave way lately, and the weight broke through the second floor, with all the grain on both floors. One man was killed and two injured.——The Turin journals state that the villa on the banks of the lake of Como, belonging to the Countess Blevio, has tumbled down, a great part falling into the lake.

Collegiate Church of the Carmelites, Dublin.—This church, which is built on the off side of the quadrangle, or playground, of the Carmelite College, 41, Lower Dominick-street, Dublin, has been built in alternate courses of granite and dark stones, forming a pleasing contrast. It is over sixty feet long, and about twenty-six feet wide; and the ceiling, which is groined, is twenty-six feet high in the centre. The church is divided into chancel and nave, and there is a gallery for a choir at the end. Opposite the chancel, a sacristy and cloister extend to the full length at one side of the church, and the other side is designed so that a narrow cloister may also be added. The arches have alternate voussoirs of granite and red bricks. The niches are of Caen stone, and the hoods of the lower niches project with a graceful curve from the wall. The string courses and hood mouldings are of granite. The parapet is relieved with red brickwork, and capped with granite. Mr. Oliver T. Healy was the architect.

Improvements in the Island of Lewis.—Since Sir James Matheson became proprietor of the Seaforth estates in Lewis, about twenty years ago, he has spent, it is said, upwards of 10,000*l.* on education alone. He has, besides, expended on roads, 20,000*l.*; bridges, 6,000*l.*; brickworks, 6,000*l.*; patent slip, 7,000*l.*; steamers' quay, 500*l.*; fish-curing stores, 1,000*l.*; draining, trenching, farm offices, &c., 50,000*l.*; meal during the destitution years, partly repaid by labour, 25,000*l.*; timber, 10,000*l.*; grain and seed to tenants, 6,000*l.*; steamers for opening up communication, 30,000*l.*; emigration, 11,000*l.*; Lews or Lewis Castle and grounds, 100,000*l.*; arrears due by tenants abated, 10,000*l.*; peat-works, for distilling oils, &c., from peat, 15,000*l.*,—making altogether an expenditure of 307,500*l.* on his estate (the purchase price of which was 190,000*l.*), all in the short space of twenty years. This isle of the Hebrides abounds in Druidical edifices and ruined fortresses. Stornoway is (or was) its only town.

New School for Alloa.—The late Mr. Alexander Paton, of Cowden Park, Alloa, amongst many bequests, bequeathed the sum of 5,500*l.* to build and endow an educational seminary in Alloa. The trustees under the deceased gentleman's will had a meeting a few days ago, and fixed on the site of the new building. The new structure will be a building in the Elizabethan style, with a tower.

Extension of Leith Docks.—A new wet dock is to be constructed on the east side of the harbour, of greater depth and much larger dimensions than any of the existing wet docks on the west side; in point of fact, nearly doubling the present wet-dock accommodation. From a paper descriptive of the scheme, read at the Royal Scottish Society of Arts, by Mr. Robertson, the resident engineer, we learn that about 36 acres of the east sands of Leith are to be inclosed. The dock, with entrance-basin and lock, will occupy about 13 acres, leaving about 23 acres for wharfage and other purposes. Contracts have been entered into for the construction of the dock, amounting altogether to about 224,500*l.*

Public Works (Manufacturing Districts), Feb. 15.—Out of 53 places which have obtained powers to execute works, at the end of January, 1864, the numbers of men employed are—skilled, 810; unskilled, 2,536; or, on the whole, 3,346. This number represents not less than 10,000 persons, as the men are for the most part married and have families. Some 1,000 or 1,500 persons indirectly find employment in getting stone flags and in making bricks, &c. This would, with the men's families, represent 3,000 persons, or, in the whole, some 13,000 persons may be said to receive aid through the Public Works Act. The Poor Law Board have ordered work for 1,036,876*l.* Mr. Rawlinson, the Government engineer, has reported on estimates amounting to 1,177,743*l.* Reports are being made each week as applications are sent in. The reports made and sanctioned provide for the working of 129 miles of main sewers and 145 miles of streets formed and paved. This work is now in course of progress. The earthwork sanctioned will amount in the whole to some 3,000,000 cubic yards.

Clifton Suspension Bridge.—A report states that the progress of the works has been as satisfactory as was anticipated, and the engineers confirm the anticipations of the directors, that at the August meeting the works will be approaching completion. Measures are in contemplation for erecting villa residences in the Leigh woods, which cannot fail to be of service to the undertaking. The capital of the company is 35,000*l.*, of which less than 1,000*l.* remains unprovided, and the directors feel confident that the deficiency will shortly be made good. The engineers (Messrs. Hawkshaw & Barlow) report that, notwithstanding the unusually stormy weather in the autumn of last year, two of the main chains on the eastern side of the bridge have been completed and the fixing of the third chain is being proceeded with. The anchorages on the western side of the bridge are all completed, the anchor plates fixed, and everything is ready for proceeding with the chains as soon as the temporary staging can be shifted over to that side. The accounts show a total receipt of 19,780*l.* to the 31st of December last, of which a balance of 3,426*l.* is unexpended.

Railway Matters.—The directors of the Great Eastern Railway Company have declared a dividend at the rate of 2½ per cent.——The proposed dividend of the London and North-Western Railway is 6 per cent. per annum, against 5½ per cent. in the same period of 1862.——The directors of the Victoria Station and Pimlico line recommended a dividend of 2 per cent. for the half-year, making 5 per cent. for the year, as compared with 4½ per cent. in 1862. The directors put forth the following estimate of prospective dividends,—viz., for 1864, 5½ per cent.; for 1865, 6½ per cent.; for 1866, 7½ per cent.; for 1867, and in perpetuity, 9 per cent., with the probability of a small bonus every eighteen months.——The traffic receipts of railways in the United Kingdom amounted, for the week ending the 30th of January, on 11,146 miles, to 563,916*l.*, and for the corresponding week of last year, on 10,734 miles, to 503,835*l.*, showing an increase of 412 miles, and of 60,081*l.* in the receipts.——A new station on the Manchester, Sheffield, and Lincolnshire line has been opened at Dukinfield. The building is of stone, and contains the necessary offices and waiting-rooms, &c. It will be of use to the west end of Ashton as well as to Dukinfield.

COMPENSATION CASE: METROPOLITAN RAILWAY.—At the Lord Mayor's Court a writ of inquiry was recently instituted to assess the compensation to be awarded to the claimant in respect of a free public-house, known as the Grapes, in Whitecross-street, such premises having been taken by the defendants in accordance with their Line of Deviation Act. The claim was for 4,500*l*. Mr. Daniel Cronin, public-house surveyor and valuer, said he thought the claimant was entitled to 4,500*l*., and 10 per cent. for compulsory removal. The jury found for the claimant, 3,850*l*. compensation.

PROTECTION OF THE METROPOLIS FROM FIRE.—In reply to Sir M. Farquhar, in the Commons, Sir G. Grey said he hoped to be able to introduce a bill during the present session for the better protection of the metropolis from fire. The Metropolitan Board of Works had signified their willingness to undertake that duty, subject to the condition that the whole of the expense should not fall upon the ratepayers of the metropolis. As to the details, some further arrangements would have to be made, and he could not say when the bill would be finally prepared.

INSTITUTION OF CIVIL ENGINEERS, DUBLIN.—At the last general meeting of the institution, at the new buildings, Trinity College, the chair was taken by Professor Downing. The Rev. Dr. Haughton, F.T.C., read a paper "On the best mode of Calculating the Resistance to Fracture of large Iron Beams when suddenly struck." He said his attention had been directed to this problem by the accident which happened to the Hartley Colliery engine-beam, in January, 1862. Professor Haughton gave, with some detail, the results at which he had arrived. A long discussion ensued. Mr. A. M'Donnell then read a paper entitled "An Account of the Rapid Destruction of the Boilers of Locomotives on the Danube and Black Sea Railway."

WATER SUPPLY FOR STOW-ON-THE-WOLD.—A committee, appointed by the inhabitants to make the necessary inquiries, came to the unanimous conclusion that the best means to obtain an unlimited and permanent water-supply for the town would be to adopt the Local Government Act of 1858, and raise money for that purpose upon the security of the rates. A requisition of twenty owners and ratepayers was accordingly signed and forwarded to the churchwardens, who convened a public meeting to consider a resolution for the adoption of the Act; but upon the resolution being put to the meeting, it was lost by a show of hands. A poll was then demanded, and it took place on the 5th inst., with the following result:—For the Local Government Act, 95; against it, 45; majority for the Act, 50. The promoters, therefore, have petitioned the Secretary of State to approve the same.

MONUMENTAL.—A monument has been placed near the centre of the Ladye Chapel, in York Cathedral, to the memory of the late Archbishop Musgrave, who held the see of York from 1847 to 1860. The monument is a tomb in shape, and is of the Gothic style. In length the tomb is 8 feet 10 inches, in breadth 3 feet 6 inches, and in height 3 feet 7 inches. Around the monument are sixteen circular columns of alabaster of a reddish tint surmounted with carved capitals illustrative of the vine-leaf and grapes, the oak-leaf and acorn, the thorn-leaf with blossom, &c. The tomb is of Caen stone, and on one side is the inscription. A figure of the Archbishop surmounts the tomb. It is about 7 feet in length, and represents the late Primate in a recumbent position, and attired in his episcopal robes. The figure is of white Carrara marble, and rests upon a mattress, the head being supported upon a cushion with tassels, and the whole is chiselled out of a block of marble which weighed nearly three tons. The sculptor was Mr. Noble, of London, and Mr. Brandon, architect, prepared the design for the tomb.——According to letters from Algiers, the Arabs of the different tribes who had applied for an authorization to open a subscription among themselves for the purpose of erecting a monument in commemoration of the Emperor's visit, have received permission to that effect. The subscription is fixed at 1fr. for each tent, in order that it may be more general. The monument is to be erected on the Place Napoleon, the finest in Algiers.—— The *Trieste Observer* states that a bust by the hand of Canova has just been discovered in the villa of Altichiero, near Padua. It is the bust of Paul Renier, the last but one of the Doges of Venice.

ACCIDENTS ARE COSTLY.—We are told that the friends of the late Mr. Robson, the gentleman killed in December last, at Darlington, by the flooring of the newly-covered market giving way, have made a claim on the local board of health for 2,500*l*.

TENDERS.

For two houses, out-offices, and stables on the Maindiff Court estate, Abergavenny. Messrs. Elmslie, Franey, & Haddon, architects:—

King (accepted)	£2,900 0 0

For the valuation of the whole of the parish of Newchurch, Isle of Wight. The parish is thirteen miles long, extending from the north to the south coasts of the island: it includes the towns of Ventnor and Ryde, has an area of 8,870 statute acres, and contains 2,677 houses:—

Dobson, London	£1,200 0 0
Smith, Northampton	1,080 0 0
Read, Southampton	1,000 0 0
Livesay, Portsmouth	700 0 0
Stratton, Newport, I. W.	700 0 0
Harris & Metcalf, Winchester	600 0 0
Stanley & Tuckett, London	535 0 0
Smith, Wicham	525 0 0
Hellyer, Ryde	507 0 0
Hemmings & Son, London	475 0 0
Gisborne, Derby	460 0 0
Cookes & Bateman, Leamington	452 0 0
Appleby & Newman, Fareham	420 0 0
Newman, Ryde (accepted)	409 0 0
Elliot, Southampton	400 0 0
Watney & Penfold, London	400 0 0
Payne, London	344 8 0
Cole, Clevedon	250 0 0
Lewersedge & Venn, Taunton	240 0 0
Norris, London	240 0 0
Thompson, Staffordshire	195 10 0

For first portion of warehouses, stables, &c., on Miss Kell's Estate, Curtain-road. Mr. William Reddall, architect:—

Ashby & Sons	£1,650 0 0
Scott	1,620 0 0
Pritchard	1,545 0 0
Conder	1,531 0 0
Smithers	1,447 0 0
Killby	1,443 0 0
Macers	1,395 0 0

For a pair of small residences on the Addiscombe Estate, Croydon, for Mr. G. Mathews. Mr. Henry Bance, architect:—

Chilton	£1,415 0 0
Priddle	1,390 0 0
George	1,170 0 0
Holmes	1,128 0 0
Seaby	1,072 10 0
Dover	1,049 0 0
Thomas & Jenkins	1,035 0 0
Blower (too late)	1,027 10 0
Wilson & Raynham	995 0 0
Lamble	969 0 0

For National Branch Bank at Camden Town. Mr. Thos. Chatfeild Clarke, architect:—

Axford & Co.	£4,095 0 0
Laurence & Sons	3,832 0 0
Palmer	3,751 0 0
Ashby & Sons	3,545 0 0
Patman & Co.	3,535 0 0
Anson	3,525 0 0
Scriviner & Co.	3,260 0 0
Browne & Co.	3,126 0 0

For the erection of the New Wesleyan Chapel and Schools, Marlborough-road, Banbury, Oxon:—

	Design No. 1, in Stone.	Design No. 2, in Brick.
Jones & Sons	£4,300 0 0	£4,200 0 0
Davis	3,900 0 0	3,650 0 0
Claridge	3,895 0 0	3,573 0 0
Kimberley	3,400 0 0	3,240 0 0

Accepted for villa residence, at Ventnor, for P. O'Brien, Esq. Mr. Francis Newman, architect. Quantities supplied:—

Mason, Plasterer, &c.

Beavis & Son	£448 15 0

Carpenter and Joiner.

Wickens	£274 15 0

Plumber, Glazier, and Painter.

Vincent	£63 0 0

For adding Committee-room, Board-room, Judge's-room, stone staircase, &c., to the Town-hall, Ryde. Mr. Francis Newman, town surveyor. Quantities supplied:—

W. H. Denham	£638 10 0

Smith	687 0 0

For houses and shops, North-road, Forest-hill, for Mr. W. J. Thompson. Mr. R. P. Pullan, architect. Quantities by Mr. E. W. Crocker:—

Myers & Sons	£4,160 0 0
Jackson & Shaw	3,963 0 0
Macey	3,895 0 0
Colls	3,889 0 0
Foster	3,750 0 0
Turner & Sons	3,499 0 0

For new assembly-room, Gun Tavern, Croydon. Mr. Henry Bance, architect:—

Budd & Pearce	£640 0 0
Priddle	609 9 0
Harding & Cox	593 0 0
Shelton	588 0 0
Wilson & Raynham	493 0 0
Easford	490 0 0
George	489 0 0
Thomas & Jenkins	453 0 0

For building Wine Vaults, Argyle House, Argyle-street, for Messrs. Haig & Co. Messrs. W. & H. Moseley, architects. Quantities supplied by W. W. Gwyther, Esq.:—

Hill, Keddle, & Co.	£11,250 0 0
Trollop	11,065 0 0
Holland	10,855 0 0
Piper Wheeler	10,847 0 0
Nicholson	10,700 0 0
Hill & Sons	10,609 0 0
Myers	10,112 0 0

For house at Potter's Bar, for Mr. G. Whitehouse. Quantities supplied:—

Dimsdale	£1,395 0 0
Rudkin	1,320 0 0
Killby	1,268 0 0
Pocock	1,143 0 0

For warehouse and stabling, Curtain-road, Mr. W. Reddall, architect:—

Ashby & Son	£1,650 0 0
Scott	1,620 0 0
Pritchard	1,545 0 0
Conder	1,531 0 0
Smithers	1,447 0 0
Killby	1,443 0 0
Macers	1,396 0 0

For "Marquis of Lansdown," Stoke Newington. Mr. Chester Cheston, architect:—

Ennor	£1,666 0 0
Eaton & Chapman	1,650 0 0
Killby	1,589 0 0
Simms & Marten	1,545 0 0
Macers	1,541 0 0

TO CORRESPONDENTS.

Deodorising.—A correspondent is desirous of receiving information as to the best form and mode of using gypsum mixed with charcoal as a deodoriser of town sewage where there are very few closets; and whether the gypsum should be calcined or not. Any person having used gypsum for deodorising purposes would confer a favour by communicating the result.

Ina's Palace (Mr. Chapman has already replied in our pages to the correspondent whose comments he objected to, and we must decline to return to the subject).—A Yorkshire Mason (such a book was advertised in our last Number).—J. R. H. (a "cymagraph" is exactly what our correspondent terms it: an instrument for taking the sections of mouldings. It was obtainable some years ago from the instrument-makers named. Considerable practice is required for efficient use).—C. H. D.—H. H. (must look to precise words of Copyright Act).—T. M.—J. G. L.—W. C. (the committee has ceased to sit. Send the article).—Mr. C. (iitto)—J. W. H. (thanks).—Student (the per cent has long been the established charge for measuring and making out bills for artificers' work).—H. C. R.—Four Road Surveyors.—C. T. H.—A Subscriber (it is a question of degree to be judged on the spot. Frost may entirely destroy brick or stone-work, or may simply injure the face of it).—J. C.—T. K.—J. D.—Mr.—E. N. A. M.—G. F. T.—T. R.—Builder's Clerk.—W. H. P.—W. Queensland (thanks; and for good wishes and good opinion).

"Chancels."—We are forced to postpone Mr. Elliott's reply.

We are compelled to decline pointing out books and giving addresses.

All statements of facts, lists of tenders, &c., must be accompanied by the name and address of the sender; not necessarily for publication

ART-UNION OF LONDON,

444, WEST STRAND, W.C.

Instituted 1837. Incorporated 1846.

The Subscription List Closes March 31st.

Every Subscriber of ONE GUINEA will receive a Volume of

TWENTY ILLUSTRATIONS

OF THE RIME OF

"The Ancient Mariner,"

By S. T. COLERIDGE,

Designed by J. NOEL PATON, R.S.A., expressly for this Society, bound in cloth and gilt, with the Poem handsomely printed on toned paper;

BESIDES A CHANCE OF A PRIZE AT THE ANNUAL DISTRIBUTION IN APRIL.

THE PRIZES INCLUDE

PRIZE DESIGNS.—"Undoubtedly, however, the finest show in this respect is made by Benson, who offered prizes for designs for watch-cases at the South Kensington Museum, and who by this means has secured some of the most exquisite ornamental details for watch-cases that are shown in the building."—*Times*, May 7, 1862. Chronometer, duplex, lever, horizontal, repeaters, centre seconds, keyless, split seconds, and every description of watch, adapted to all climates. Benson's Illustrated Pamphlet on Watches (free by post for two stamps) contains a short history of watch-making, with prices from 3 to 200 guineas each. It acts as a guide in the purchase of a watch, and enables those who live in any part of the world to select a watch, and have it sent safe by post. Prize Medal and Honourable Mention, Classes 33 and 15.—J. W. Benson, 33 & 34, Ludgate-hill, London. Established 1749. Watch and Clock Maker by Special Warrant of Appointment to H.R.H. the Prince of Wales.

GEORGE REES, 57, DRURY LANE.
Four doors from Drury-lane Theatre. Established in 1500

VENTILATION—PURE AIR.
Sheringham's Day and Night Ventilator  for the admission of Pure Air.
THROUGH THE EXTERNAL WALL.
These Ventilators are arranged so that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 187 and 189 (late 117 and 118), Union-street, Borough, London.

GUTTA-PERCHA MILL-BANDS.—The Gutta-Percha Company beg to state that the increasing demand for the Gutta-Percha Straps for Driving bands, Lathestraps, &c. fully justifies the strong recommendations they have everywhere received. Their durability and strength, permanent contractability and uniformity of substance; their non-susceptibility of injury from contact with oils, grease, acids, alkalies, or water; and the facility with which the only joint required can be made in bands of from 200 to 300 feet long, render them superior to leather for almost all working purposes, and decidedly more economical. Every variety of Gutta-Percha Articles, such as Tubing, Soles, Pump-buckets, Fire-buckets, Bosses, Union-joints, Flasks, Bottles, Bowls, Toilet-trays, Curtain-rings, Galvanic Batteries, Tarbotype Trays, &c. &c manufactured by the Gutta-Percha Company, and sold by their Wholesale Dealers in town and country.
THE GUTTA-PERCHA COMPANY, PATENTEES,
18, WHARF ROAD, CITY ROAD, LONDON.

CROGGON and COMPANY,

EVERY ARTICLE MANUFACTURED AT THE ABOVE WORKS.
N.B. These goods are supplied to the largest Steel Smelting, Armour Plate, and Crucible Works in the World, to which references can be given on application.

TO BRICKMAKERS.—All Parties who BURN BRICKS in CLAMPS are invited to inspect the NEW MODE of SETTING, patented by Mr ROBERT WHITE, and which may be seen in operation at the Brickfields of
J. B. WHITE & BROTHERS, Erith, Kent.

The advantages of this plan are two-fold.
1st. Nearly all the bricks are burnt into stocks, and the yield of inferior bricks is reduced from 35 to about 10 per cent of the total make, which in itself represents a large permanent saving.
2nd. The bricks are so much improved in colour and soundness as to give them a considerable additional value in the market over common stocks.
Licenses for use of the Patent granted to Brickmakers, on application to the Patentee, 17, Millbank-street, Westminster.

This stone (which is a perfect oolite) is raised in blocks of any portable size, and is about four feet thick in the bed. It will stand ANY WEATHER, is much used for water-works, and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is wrought at a cheaper rate than any stone in the kingdom.
*** The above WEATHER STONE is 1s. 9d. per cubic foot, delivered in London.

THOMAS GAUNT, on TUESDAY, WEDNESDAY, and FRIDAY, the 1st, 2nd, and 4th of MARCH, 1864, the whole of the extensive and valuable STOCK IN TRADE, LIVE STOCK, and other Effects, the property of Mr. John Bird, Builder, who, in consequence of ill health, is retiring from business: consisting of several fine oak and elm trees, a large quantity of well-seasoned English oak, elm, and deal planks and boards of large dimensions, several builders and deals, and a quantity of useful wood of all descriptions; patent mortising machine, superior timber jill, timber carriage, trucks, lead cutter, wheel barrows, ladders, and various other implements; also a large assortment of builders' and other ironmongery; quantity of Kottam, Ancaster, York, Mansfield, Casterton, and other stone; gravestones, portable chimney-pieces, sinks, troughs, glazed pipes, fire and other bricks, slate, &c. The Plumbers' and Glaziers' Stock consists of new pumps, barrels, lead pipe, piping of all descriptions, sheet lead, zinc, colours, tools, &c. The Blacksmiths' Stock comprises a quantity of new and old iron, bellows, anvils, and the usual tools used in the business, all of which are in capital order and nearly new. Also five excellent Scotch and other carts, one cart nearly new, light gig, small market cart, well built pony chaise, about 30 tons of well-got hay, wheat straw, a heap of well-got wheat straw, a heap of useful cart horses, mag mare three years old, excellent pony, about to ride and drive, 3 handsome Brittany cows down calving, 6 sows and barns, 3 largestack clothe, 8 new tubs, several pieces of canvass, valuable materials of buildings standing in close, 2 well and water carts, Samuelson's patent turnip-cutter, root pulper, 1 pig and sheep troughs, corn bins, water and well tubs, and a quantity of other useful effects. SALE to commence each day at ELEVEN o'clock punctually. Catalogues may be obtained at the principal Inns in the neighbourhood; and of the Auctioneer, Huntingdon, who will forward the same by post on application.

TEDDINGTON and HAMPTON WICK Middlesex.—Valuable FREEHOLD BUILDING LAND, tithe free, exonerated from the Landtax, and arranged in plots forming suitable sites for the erection of villa and other superior residences.

MESSRS. DRIVER & CO. will SELL by AUCTION, at the MART, near the Bank of England, on FRIDAY, MARCH 4th, at ONE o'clock precisely, 41 lots of valuable FREEHOLD BUILDING LAND, well situate between the picturesque village of Teddington and Hampton-wick, near the Town of Kingston, Bushy Park, the river Thames, Hampton Court, and other attractive features of this favourite residential district. The property is within forty minutes' ride of London, being close to the Hampton-wick station on the Kingston branch of the South-Western Railway, and only a short distance from the Teddington station.—Particulars, with plans, may be had at the principal Inns in the neighbourhood; at the Auction Mart, London; of Messrs. TERRELL & CHAMBERS, Solicitors, Kingston-upon-Thames; and of Messrs. DRIVER & CO. Surveyors, Land Agents, and Auctioneers, 4, Whitehall, S.W.

The Estate of John Pryce, esq. deceased.—The MERTON ABBEY LODGE PROPERTY, an extensively valuable Freehold Estate, and all the buildings, surrounded by good roads, and in close proximity to several important railway works.

MESSRS. EDWIN FOX & BOUSFIELD will SELL by AUCTION at the MART, close to the Bank of England, on WEDNESDAY, FEBRUARY 24th, 1864, at TWELVE, in one or more lots as may be determined at the time of sale, the valuable FREEHOLD ESTATE distinguished as Merton Abbey Lodge, most agreeably situate on the high street, Merton, Surrey, about one mile from the Wimbledon Station on the South Western Railway, and half a mile from the Merton Station on the Wimbledon and Croydon line, comprising the spacious and substantial Lodge residence, containing Entrance Hall, dining and drawing rooms, capital kitchen and domestic offices, with usual requisites, and numerous bedrooms; coach-house and stabling, and well wooded grounds, approached by a carriage sweep, with lodge at entrance. It is surrounded by about 33 acres of land in pleasant meadows, arranged in convenient enclosures, and are let to tried tenants, at moderate rents, and necessary buildings, offices with suitable cottages upon. Also, adjoining the Kingston and Wimbledon line, in the occupation of Cottages, Forge, Workshops, &c. The whole is leased for a term expiring at Michaelmas next, when possession can be had. The estate possesses a commanding frontage, with a depth of about 400 feet, to the London Road on the East, and a frontage of 770 feet to an important leading road at right angles thereto, with great capabilities for opening up other roads between the two streets, and a very thousand additional feet of available building frontage. The facility of communication with the metropolis, the rapid growth of the neighbourhood, and the important railway works contemplated for the district, tend to create a great demand for houses, and to ensure success to a well-devised enterprise.—Particulars may be obtained of HENRY WANSEY, Esq. Solicitor, 26, Moorgate-street; and of Messrs. EDWIN FOX & BOUSFIELD, 41, Coleman-street, Bank.

TO SAW-MILL PROPRIETORS, ENGINEERS, AND OTHERS.

MESSRS. FULLER & HORSEY are instructed by the Administratrix to SELL by AUCTION, on FRIDAY, MARCH 4th, at TWELVE o'clock, on the PREMISES, Mercia Wharf, High street Borough, the PLANT and MACHINERY of a STEAM SAW MILL, including two beam steam engines of 30 and 20 horse power, two elephant steam boilers and fittings, five circular saw benches, a circular saw bench, arrowing machine, deal and timber saw frames, a circular saw bench, arrowing machine, moulding and sash bar machines by Rose, shafting and pulleys, leather belting, and other useful saws, 12 ft motive wheel and pinion, 2 lathes, fire-engine, quantity of tools, steam road carriage, pinion, 2 lathes, fire-engine, quantity of tools, steam road carriage, chaff machine, two portable offices, two carts, a man horse, and other effects.—To be viewed the day previous and morning of sale, when catalogues may be obtained on the Premises, and of Messrs. FULLER & HORSEY, 13, Billiter street, London, E.C.

TO GASOMETER MAKERS, BOILER MAKERS, ENGINEERS, AND OTHERS.

MESSRS. FULLER & HORSEY are instructed to SELL by AUCTION, on MONDAY, MARCH 7, at ELEVEN, on the PREMISES, No. 8 Wharf, Weaver's road, City-road, in lots with or reserve, the PLANT and IMPLEMENTS, including seven powerful punching and shearing machines, drilling machine, a 6-horse high pressure table steam engine, tubular boiler, a multi-tubular boiler with steel tubes, steel crab, set of plate bending rolls, slide lathe, mandrils for punching machine, shafting, pulleys, and leather bands, erection of plate and angle iron furnace, gas apparatus with retort, purifier and two holders, vices and benches, four smiths' hearths with fourteen portable forges, two portable weighing machines, thirteen pairs iron blocks, two tons chain and chain slings, two lifting-jacks. 12 10-feet gauge lowering screw jacks, thirty two sets bolts, nuts, and rivets, 50 feet gas pipe, with iron erect on of 40 scaffold poles and boards, rope falls, wrought iron erect on of workshop, with semi-circular roof, 66 feet long 27 feet span, two open sheds with 2 in. roofs, quantity of wood, thirty iron piles, 40 gunners' and smiths' hammers, ratchet braces, vices, office furniture and fittings, wrought-iron fire-proof safe, spring van, dog-cart, two sets of light spring carts, and other effects. To be viewed on Saturday previous to the sale; when catalogues may be had on the Premises, and of Messrs. FULLER & HORSEY, 13, Billiter-street, E.C.

KEYNSHAM BLUE LIAS LIME AND CEMENT WORKS, SOMERSET.

MESSRS. FULLER & HORSEY are instructed by the Official Liquidator to SELL by AUCTION, on WEDNESDAY, MARCH 16th, at TWELVE o'clock at the AUCTION MART, London, in One Lot, unless an acceptable offer be previously made by Private Contract, the valuable FREE-HOLD ESTATE and ESTATE of the Keynsham Blue Lias Lime and Cement WORKS and ESTATE of the Keynsham Blue Lias Lime and Cement Company (Limited), together with the modern PLANT and MACHINERY. The property is freehold, and includes a site of 7a. 2r. 36p. or thereabouts. The works were established for manufacturing blue lias lime from stone quarried on the estate, and for making cement. The ex sting kilns and engines are capable of producing 200 to 300 tons of lime and 120 tons of cement weekly; both products are well approved by large contractors at eminent architects, the cement being used in many of the Government fortifications in progress. Coals are supplied to the works at a very low price, and the Great Western Railway Station is within a short distance. The buildings are very substantial, and the machinery of the best description; the motive power is given by two iron water-wheels, driven by the river Chew, a regular stream of water, of great power; and there is a fine engine pit, with both 12 and 7 inches. A letter supply of lias stone is secured from adjoining own estate, capable of producing 200 tons weekly. The site, and particulars and conditions of sale may be viewed, 14 days prior to the sale, and particulars had of F. MAYNARD, Esq. Liquidator, 10, Bread-street, Cheapside; at the Mart; and of Messrs. FULLER & HORSEY, 13, Billiter-street, London, E.C.

SALE of the AUCTION MART, LONDON.

The Directors of the Company of Proprietors of the Auction Mart will be prepared, at ONE o'clock precisely, on MONDAY, the 29th day of FEBRUARY next, at the Board-room of the said Company, at the Mart, to open sealed TENDERS from persons desirous of PURCHASING the premises generally known as the AUCTION MART, opposite the Bank of England, London. Each Tender must be accompanied with a receipt annexed to it, signed by the proper officer of the Union Bank of London, acknowledging that the sum of 2,000l has been paid into their bank to the credit of the Company, on account there of "The Trustees of the Auction Mart"; and no consideration will be taken of the Tender of any person who shall not have delivered his Tender at the above-mentioned office, addressed to the hands of the Secretary of the said Company, either on SATURDAY, the 27th day of FEBRUARY next, between the hours of TEN and ONE precisely, or during the forenoon of MONDAY, the 29th day of FEBRUARY, between the hours of TEN and ONE p.m after which last named date and hour no Tender will be received. The highest Tender will be accepted, provided such Tender shall be for a sum equal amount to, or exceed, a reserved price determined upon by the Directors of the said Company, and placed under the seal of the Company in the custody of the Secretary; and upon opening the Tenders it shall be found that two or more Tenders are of the same amount, such amount being the highest amount then offered, the Directors of the said Company reserve the power of deciding which one of such two or more Tenders shall be accepted, and of rejecting the one or more not so accepted. A form of agreement has been prepared for the purchase to be subscribed by the party whose Tender shall be declared accepted, immediately upon any such declaration being made by the Directors of the said Company, and in default of so doing such person shall absolutely forfeit to the Company the sum he shall have previously deposited in the said Bank. Copies of the said agreement, together with copies of the abstract of title, and conditions of Sale, are deposited at the Auction Mart, or at the Offices of the Solicitors to the said Company, Messrs. UPTON, HOWARD, & UPTON, 20, Austinfriars, E.C. The moneys deposited by all parties whose Tenders may not be accepted will be returned to them on application at the Union Bank of London, on the 5th day of February, between the hours at which a final declaration may be made with respect to the Tenders received, and forthwith on the ensuing day between the hours of Ten a.m. and Four p.m. The premises may be viewed by all persons producing their Tenders, [illegible] aforesaid.—By order of the Board of Directors,

Auction Mart, January, 1864. G. H. JAQUES, Secretary

IMPORTANT SALE OF TIMBER FAGGOTS, &c—NEAR SOUTHEND, ESSEX.

MR. R. HORNER has received instructions from D. R. Scratton, esq. to SELL by PUBLIC AUCTION, early in the month of MARCH next, 1,500 fine ASH and ELM TIMBER TREES, with about 1,500 faggots and top wood, now felled, and lying on Barton Hall and Hampton Barns Farms, close to water carriage, and within a mile and a half of the Southend Railway Station. Further particulars in future advertisements; and of Mr. R. HORNER, Auctioneer, &c. No. 1, Cambridge terrace, Cliff Town, Southend, Essex.

UNRESERVED SALE — To GENTLEMEN, GARDENERS, BUILDERS, ARCHITECTS and OTHERS.

MESSRS. DEBENHAM & TEWSON have received instructions (in consequence of the property having been unfortunately for the Trustees purchased) to SELL by AUCTION, on the Premises, Wardour-street, Soho, Westminster, on THURSDAY, FEBRUARY 25th, at ELEVEN, the VALUABLE STOCK of ARTIFICIAL STONE, including architectural and ornamental dressings, pedestals, vases, chimney-pots, balustrades, and numerous memorials of various designs and patterns; [illegible] bottles, troughs, pillasters, landings, tazzas, vases, balustrades, fountains, and other effects. May be viewed two days preceding, mornings of Sale, and catalogues had on the Premises, and at the Auctioneers' Offices, 80, Cheapside.

FARNHAM, SURREY.—About 14 Acres of Freehold Land, adapted for building or a country mansion purposes, conferring votes for the county.

MESSRS. DEBENHAM & TEWSON will SELL, at the MART, on TUESDAY, MARCH 1, at TWELVE, TEN ACRES of valuable FREEHOLD LAND, in two lots. The property adjoins the Bear Inn, at the south-west end of the town and railway station of Farnham, and possessing a frontage of [illegible] to the road leading from the Bear to Denbies Hill, and that from Farnham to Frensham. Also 3a. 1r. 22p. of FREEHOLD LAND, very eligibly situate at Badshot, in the parish of Farnham aforesaid. Both possess frontages to the road, and is now in hand. The west of the town and railway station. Possession of each lot will be given on completion of the purchase.—Particulars of Messrs. LEA & SANDERS, Solicitors, Barge-yard chambers, Buckleisbury; Messrs. PEEK & DOWNING, Solicitors, 10, Basinghall-street; and of the Auctioneers, No. 80, Cheapside.

WESTMINSTER.—Valuable and extensive Plot of Freehold Building Land, in Victoria-street, for immediate Sale

MESSRS. DANIEL SMITH, SON, & OAKLEY have received instructions to SELL by AUCTION at the MART, near the Bank of England, on WEDNESDAY, the 24th of FEBRUARY, at TWELVE o'clock, in one lot, a very valuable FREEHOLD ESTATE, consisting of a large PLOT of first-class BUILDING LAND, in a first-rate position, in Victoria-street, Westminster, close to the Abbey and the Houses of Parliament. It has a frontage of about 660 feet to Victoria-street, and of about 150 feet to Brewers green, with a considerable depth, and has an area of about two acres. The situation renders this land well adapted for the site of any public building or institution, or for the erection of professional offices, so much in demand in this neighbourhood; and a block of this size, in the heart of London, is becoming daily more difficult and costly to obtain. The land (except as to a very small portion) is held direct from the original freeholders, and is not affected by the liabilities of the Westminster Improvement Commissioners.—Particulars, with plans, may be had of Messrs. W. and W. A. WALKER, 37, King-street, Cheapside, E.C.; at the Mart; and of Messrs. DANIEL SMITH, SON, & OAKLEY, Land Agents and Surveyors, No. 10, Waterloo-place, Pall-mall, S.W.

CAMDEN TERRACE, CAMDEN TOWN, TO PIANOFORTE MAKERS, BUILDERS, CARPENTERS, AND OTHERS.

MESSRS. LEREW & LEREW will SELL by AUCTION on MONDAY, February 29th, at TWELVE, for ONE, 14,000 feet of dry Canada LUMBER BOARDS, an quantity of planks, deals, battens and boards flooring and mat boards, slating battens, mouldings, cary wide pine, quartering, dry oak, mahogany and birch, pine and Baltic boards, and full particulars, 1,000 Lambstone chimney pieces, plate glass doors, 40 new four panel doors, &c. Auctioneers' Offices, Cardington-street, N.W.

FREEHOLD BUILDING LAND, situate five minutes' walk of the Teddington Railway Station, S.W.R. arranged in small building plots, to suit the requirements of tradesmen and others, and offering unusual advantages for the erection of Residences for occupation or investment.

MR. J. MICHELS will SELL by AUCTION, at the Clarence Arms, Teddington, on WEDNESDAY, MARCH 2nd, 1864, at TWELVE for ONE o'clock precisely, 68 Lots of Valuable Freehold BUILDING LAND adjoining Teddington, Middlesex, and in close proximity to Bushy Park, Hampton Court, and other attractive localities, within twelve miles of Hyde Park and five minutes' walk of Teddington Railway Station. Particulars of Sale, with plans, can be had at the Clarence Arms, Teddington; the Railway Hotel, Twickenham; the Castle, Mousley; the King's Head, Richmond; the Sun, Kingston; the King's Arms, Hampton Court; Messrs. FARLEY & CHILD, Solicitors, 31, Sloane street, Belgravia, S.W.; Mr. PODCOCK, 35, Craven-street, Strand; at the Auctioneer's Offices, 1, William street, Albert gate, S.W.

SCOTCH VAN HORSES.—To VAN PROPRIETORS, RAILWAY CONTRACTORS, WHARFINGERS, and OTHERS.

MR. J. GOWER has received instructions to SELL by AUCTION, at his REPOSITORY, Barbican, FRIDAY, FEBRUARY 26th, at ONE o'clock, without reserve, about Twenty six all-legged Scotch VAN HORSES (direct from the breeders). Among them are some very handsome match pairs of greys, browns, and chesnuts, all known good workers.—On view two days prior.

FOR SALE by AUCTION, at GARRAWAY'S COFFEE HOUSE, Cornhill, on THURSDAY, the 25th FEBRUARY, 1864, at FOUR o'clock precisely (by order of the Importers, &c.):

1,000 Swedish Deals and Battens	
10,500 Norway ditto	
6 000 Petersburg ditto	
6 000 Quebec Pine and Spruce Deals	
200 Loads Pine and Colonial Timber	
8 Quebec Pine Spars	
12,000 Teak Staves	
1,000 Pipe Staves and Cutters	

And at SIX o'clock precisely, without reserve, at a minimum price:

MAHOGANY	249 Logs	Honduras Mahogany (northern specimens of superior quality and good dimensions, just landed ex "Sea Serpent" from Belize.
ROSEWOOD	344 Planks	Rio.
WALNUTWOOD ..	84 Ditto	Italian.

And other goods.

Catalogues may be had where the Goods lie, and of THOMAS ROBERTS & CO. Brokers, 9, Billiter-street, E.C.

SALE OF TIMBER at 1-0, BERMONDSEY NEW ROAD, S.E.

THOMAS ROBERTS & CO. will SELL by AUCTION, on WEDNESDAY, MARCH 2nd, at ELEVEN o'clock, the fourth portion of the STOCK of Messrs. Robt. Ward & Sons, sold in consequence of their removal to Gravesend-road, Plumstead, by portion will include the justly celebrated Exhibition Log Honduras Mahogany, one of the finest and largest ever imported for many years; dry Honduras and Spanish mahogany, Rio and other wood planks, boards, battens, pipe stacks, dry and well seasoned matched and beaded boards, English oak, elm, pollard ash, spars, &c. and by order of Messrs. Ward & Sons, the valuable stock of Mr. G. T. HAYLE, of 1 metre boards, and other goods. May be viewed the day prior and morning of sale. Catalogues had upon the Premises; and of the Auctioneers, No. 9, Billiter-street, E.C.

FIRST-CLASS SECURITY.—THE STRAND MUSIC HALL COMPANY, Limited, is now issuing MORTGAGE BONDS of 50l. each, being a first charge upon the property of the Company, repayable in five years, and bearing interest at 10 per cent. per annum, payable half-yearly.

Applications for the above, which are rapidly getting taken up, and being rendered unobtainable by any other than the original subscribers, the money being redeemable by equal monthly instalments. Interest (in addition to a small premium), 5 per cent. on the balance each year.

Apply to HENRY J. PHILLIPS, Secretary.

Offices, 34, Moorgate-street, London, E.C.

NOTE.—More than a quarter of a million pounds sterling have been advanced upon this security alone

MONEY on FREEHOLD and LEASEHOLD PROPERTY, by the MUTUAL LOAN FUND ASSOCIATION

(Incorporated by Act of Parliament, 1854), 14, RUSSELL STREET, Covent Garden, W.C. Advances from 1st to 100,000l. on Freehold and Leasehold Property, for any term to ten years. Mortgages and Leases of Property for sale or to let. Greater advantages offered to borrowers than in building societies, there being no shares to subscribe for, or competition for an advance, and no deduction from the loan. No preliminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope.

EDWARD HARPER, Secretary.

ADVANCES are made by the SOVEREIGN LIFE OFFICE, 48, St. James's street, London, of sums exceeding 1,000l. to Officers and other persons resident in England, upon their securing and paying two-and-ten per cent. per annum upon the sum advanced, by way of repayment by instalments in three years, at five per cent. interest.

TO INVENTORS.—All intending Patentees should procure the PRINTED INFORMATION regarding PATENTS—their cost, and mode of procedure to be adopted—issued gratis by the General Patent Agency (Limited), 71, Fleet-street, London.

ROBERT M. LATHAM, Secretary.

London:—Printed by CHARLES WYMAN, Printer, at the Printing-office of Cox & Wyman, Nos. 74 and 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-fields; and published in the said CHARLES WYMAN, at the Office of "THE BUILDER," No. 2, York-street, in the Parish of St. Paul, Covent garden, both in the County of Middlesex.—Saturday, February 20, 1864.

PROVIDENT INSTITUTION of BUILDERS' FOREMEN and CLERKS of WORKS, 9, Conduit street, Regent-street, W.—A SPECIAL MEETING will be held on WEDNESDAY evening, MARCH 2nd, 1864. Members are particularly requested to attend. JOSEPH KAY, Cor. Sec.

NEW ZEALAND EXHIBITION, 1865.
The Commissioners appointed by the New Zealand Government hereby give Notice, that an EXHIBITION of RAW MATERIALS, Machinery, Manufactures, and Fine Arts, will be held in the City of Dunedin, Province of Otago, New Zealand, in JANUARY, 1865, when rewards for merit, in the form of honorary certificates, will be given in the several sections, with the exception of Fine Arts. Space will be reserved for Exhibitors from the United Kingdom and her Colonies, the Continents of Europe and America.—Copies of the decisions, forms of application for space, and further details may be obtained from the undersigned.—By order,
JOHN MORRISON, Agent for the New Zealand Government.
New Zealand Government Agency, 3, Adelaide-place, King William-street, London, February, 1864.

PROFESSOR TYNDALL, F.R.S., will commence a COURSE of Thirty-two LECTURES on MAGNETISM, ELECTRICITY, SOUND, LIGHT, and HEAT, on MONDAY next, the 29th FEBRUARY, at HALF-PAST TEN a.m., at the ROYAL SCHOOL of MINES, JERMYN-STREET; to be continued on every week day but Saturday at the same hour.—Fee for the course, 3l.
TRENHAM REEKS, Registrar.

EXAMINATIONS in DRAWING, conducted by the Science and Art Department, will be held in the Metropolitan Schools of Art during the months of MARCH, viz—Finsbury—William-street, Wilmington-square; Hampstead—Dispensary-building, New End; Lambeth—St. Oswald's-place, Upper Kennington-lane; Marylebone—Wells-street, Oxford-street; Rotherhithe—Deptford-road; St. George's-in-the-East—Cannon-street-road; St. Martin's—Castle-street, Longacre; St. Thomas's—Charterhouse, Goswell-street; South Kensington—Cromwell-road; Spitalfields—Crispen-street; Westminster—Vincent square. The Examination will be open to persons of both sexes, of any age. Candidates for examination must send their names and addresses to the Secretary of the Science and Art Department, South Kensington, W. on or before MARCH 7th, and at the same time state the subjects in which they desire to be examined, and at which of the above schools they desire to present themselves. They will then be informed of the exact date and hour at which they can be examined. Schoolmasters are required to furnish the number only of their students who will attend any of these examinations.
By order of the Committee of Council on Education.
23rd February, 1864.

BILLING'S PATENTS.—CHIMNEY TERMINALS.—THROAT VALVES.—NOTICE to ARCHITECTS.—The Proprietors of these PATENTS have given the Widow an Interest in the same, and have considerably reduced the prices of the Articles, trusting that by so doing these useful Inventions may be introduced more generally in all new buildings.—For prices, apply to the Manager, Mr. TYLER, 13, Abingdon-street, Westminster, who will also afford any information, he having been for many years engaged with the late Mr. BILLING, in the practical curing of Smoky Chimneys.

NOTICE.
BROWN & GREEN'S KITCHEN RANGE WAREHOUSE is now REMOVED to the NEW PREMISES, 73–74, Bishopsgate-street Within, a few doors from the late Address, at No. 81. These afford accommodation for a still larger stock of their Patent Prize Medal Ranges and Stoves, Register Grates, and Cooking Utensils, to meet the great public demand; and also for the consequent more extensive execution, by the manufacturers themselves, of all descriptions of hot water, bath, laundry, and steam work.
73–74, Bishopsgate-street Within, November, 1863.

TO ARCHITECTS.—Notice is hereby given, that the Trustees appointed by Sir John Soane will meet at the Museum, No. 13, Lincoln's-inn-fields, on THURSDAY, the 24th of MARCH, at THREE o'clock in the afternoon precisely, to DISTRIBUTE the DIVIDENDS which shall have accrued during the preceding year, from the sum of 5,000l. Reduced 3l. per cent. Bank Annuities, invested by the late Sir John Soane, among distressed architects, and the widow and children of deceased architects left in destitute and distressed circumstances. Forms of application may be had at the Museum, and must be filled up, and delivered there on or before TUESDAY, the 15th of MARCH, after which day no application can be received.

COMPETITIONS.

PROPOSED NEW CHURCH, Louth, Lincolnshire.—The Committee are desirous of receiving DESIGNS for a handsome but plain new CHURCH, to be built on the same as Trinity Church now stands, capable of holding not less than 650 persons. The outside walls to be of Ancaster stone, with slated roof, and open sittings of stained deal. The sum to be expended is 2,500l., together with all the materials of the present church, and the palisading in front of the same. The Architect's commission and expenses are to be included in this amount; and he must be prepared, if required, to find a builder willing to undertake it for such sum, including all the necessary fittings and apparatus for lighting and warming (with hot water), making the approaches to the church, and every other expense.—Plan and specifications to be sent, under cover, on or before the 21st of MARCH next, to Mr. C. E. LUCAS, Hon. Secretary.
Louth, February 24th, 1864.

TO ARCHITECTS and SURVEYORS.—PREMIUM for DESIGNS.—The Directors of the East London Bank (Limited) offer a Premium of 100 guineas for a DESIGN, PLANS, &c. of a Building suitable for the Head Office of the Bank. Particulars and conditions may be had at the Secretary's Office, 154, Fenchurch-street, E.C.—February, 1864.

CONTRACTS.

TO BUILDERS.—LEEDS MECHANICS' INSTITUTION and SCHOOLS of SCIENCE and ART.—CONTRACTS are required for the ERECTION and COMPLETION of the proposed NEW BUILDING for the above Institution. The plans, specifications, and bills of quantities will be at the Office of Mr CUTHBERT BRODRICK, Park-place, Leeds, on and after MONDAY, the 15th of FEBRUARY. Tenders are to be delivered to the Honorary Secretaries of the Leeds Mechanics' Institution, South Parade, not later than MONDAY, the 7th of MARCH. The lowest Tender will not necessarily be accepted.—By order,
H. WARDMAN, W. J. NEILD, } Hon. Secs.
February 9, 1864.

TO CONTRACTORS and BUILDERS.—TO BE LET by TENDER, the CONSTRUCTION of a BUILDING at Penzance, for the purposes of the Town Council, the County Court authorities, a Public Buildings Company, and the Royal Geological Society of Cornwall; containing a Guildhall and County Court, Council Rooms and Offices, Savings Bank Apartments, Lecture Halls Museums, Libraries, Committee-rooms, House-keeper's apartments, &c. Plans and specifications of the Works may be seen, and all information obtained, at the Architect's Office, Council Buildings Sealed Tenders, indorsed "Tender for Penzance Public Buildings," to be delivered at the Offices of R. H. RODD, Esq. Penzance, on or before SATURDAY, the 26th of MARCH next. The Building Committee do not bind themselves to accept the lowest or any Tender,
JOHN MATTHEWS, Architect.
Penzance, 1th February, 1864.

CONTRACTS.

METROPOLITAN IMPROVEMENTS.—SOUTHWARK STREET.—The Metropolitan Board of Works hereby give notice, that they will meet at their Office, in Springgardens, Charing-cross, on WEDNESDAY, the 2nd MARCH, now next, at TWELVE o'clock at Noon precisely, and will be prepared to open TENDERS by parties who may be willing to take on BUILDING LEASES all or any of certain PLOTS of GROUND, situate on the north and south sides of Southwark-street, from High-street, Borough, to Blackfriars-road, Particulars, conditions, and form of Tender, and every information may be obtained in the Superintending Architect's Office, at the Office of the Board, on and after the 1st of FEBRUARY next, between the hours of NINE a.m. and FOUR p.m. The Tenders must be on the printed form supplied at the Office of the Board, and be delivered under sealed covers, endorsed, "Tender for Ground in Southwark-street," and addressed to the Clerk of the Board, at the Office of the Metropolitan Board of Works, Spring-gardens, S.W. before TWELVE o'clock at noon, on the said 2nd MARCH next, and no Tender will be received after that hour. The Board do not bind themselves to accept the highest or any Tender.
JOHN POLLARD, Clerk of the Board.
Spring-gardens, Charing-cross, 9th January, 1864.

GLOUCESTERSHIRE.—To BUILDERS. COUNTY POLICE STATION.—The Magistrates for the County of Gloucester are willing to receive TENDERS for the ERECTION of a POLICE STATION and PETTY SESSIONAL COURT at DURSLEY. Persons desirous of Contracting for the Works may see the drawings and specification, and obtain form of Tender and any further information after TUESDAY, 1st of MARCH, on application at the Offices of Mr. J. MEDLAND, County Surveyor, Clarence street, Gloucester. Tenders sealed and endorsed "Tender for Police Station, Dursley," to be sent under cover to the Clerk of the Peace, Shire Hall, Gloucester, on or before SATURDAY, the 12th of MARCH next. The lowest or any Tender will not necessarily be accepted.
Clarence-street, Gloucester, 16th Feb. 1864.

TO BUILDERS, &c.—Persons desirous of CONTRACTING for the ERECTION of the RECTORY HOUSE, at Staple, near Wingham, Canterbury, Kent, can apply by letter only, for further particulars, to the Architect, Mr. HARRY B. NEWTON, 5, Argyle street, Regent-street, London, W.

For further particulars and Forms of Tender and Contracts, apply to the undersigned.—All Tenders must be sent to the undersigned before SIX o'clock in the evening, on MONDAY, the 7th MARCH next, and the several persons willing to contract must attend the Committee at SEVEN o'clock on the same evening.—The Vestry does not bind itself to accept the lowest or any Tender.
H. & F. CHESTER, Joint Clerks to the Vestry.
1, Church row, Newington Butts.

[For remainder of Contracts see next Page.

CONTRACTS.

SAINT JOHN, HAMPSTEAD.—CONTRACT for ROAD WATERING. The Vestry of the Parish of St. John, Hampstead, hereby give notice, that they will hereby at the Vestry meeting, to be held at the Board room, at Hampstead Workhouse, on FRIDAY, the 11th day of MARCH next, at HALF-PAST SEVEN o'clock in the evening precisely, to receive TENDERS from persons willing to CONTRACT for the SUPPLY of HORSES, WATER-CARTS, and DRIVERS for WATERING the several ROADS and PLACES comprised in the Adelaide road district, including, from, and after the 1st day of JULY next, the present turnpike-road, called the London road, commencing at the top of Rosslyn-street, near the old public house known as the Red Lion, and terminating at a boundary stone intended to be erected about midway between the Load of Hay and the Adelaide Tavern, and in the St. John's wood and Kilburn districts in this parish, at per lineal superficial yards, for one year, from the 25th day of MAY last, except as regards the London road, to the 29th day of SEPTEMBER next, and as regards the London road, from the 1st day of JULY next to the 29th day of SEPTEMBER next. Printed forms of Tender may be had, and a specification and form of contract may be seen, and further particulars obtained, at the Office of the surveyor of the Vestry, No. 10, New End, Hampstead, any day before the meeting, between the hours of TEN and FOUR. The Vestry do not bind themselves to accept the lowest or any Tender. The contractor will be required to execute a written contract, and to enter into a bond with two sufficient sureties in sum, for the due performance of the contract. None but the printed forms of Tender will be received, nor will any Tender be received after FOUR o'clock p.m. on FRIDAY, the 11th day of MARCH next—Tenders to be addressed to the Vestry Clerk of Hampstead, endorsed "Tender for Road-Watering."—By order,

THOMAS TOLLER, Vestry Clerk.

Vestry Offices, Workhouse, Hampstead, February 24, 1864.

SAINT JOHN, HAMPSTEAD.—CONTRACT for ROAD MATERIALS.—The Vestry of the Parish of St. John, Hampstead, hereby give notice, that they will be ready, at the Vestry meeting, to be held at the Board room, at Hampstead Workhouse, on FRIDAY, the 11th day of MARCH next, at half-past SEVEN o'clock in the evening precisely, to receive TENDERS for the SUPPLY of the following ROAD MATERIALS, to be delivered at such places within the said Parish, in such quantities, and at such times, with the period of twelve calendar months from the 25th day of March next, as may from time to time be directed; viz., Broken Middlesex Granite, Broken Surface Flints, Screened Ballast, Screened Gravel, Screened Hoggin, Screened Shingle, Screened Brick Rubbish and Packing, Dorking Lime, and Sharp Thames Ballast and Sand. All the matter, inclusive of the two pavior's Tenders, specifying the price per cubic yard, of all or any of the above mentioned materials in both or either of the Districts of contract will be required to execute a written contract, and to enter into a bond, with two sufficient sureties, in the sum of 500l. for the due performance of the Contract. The form of Contract may be seen at the Surveyor's Office, No. 10, New End, Hampstead, where further particulars may be obtained.—By order,

THOMAS TOLLER, Vestry Clerk.

Vestry Offices, Workhouse, Hampstead, February 24, 1864.

SAINT JOHN, HAMPSTEAD.—CONTRACT for PAVING and KERBING.—The Vestry of the Parish of Saint John, Hampstead, hereby give notice that they will be ready at the Vestry Meeting, to be held at the Board room, at Hampstead Workhouse, on FRIDAY, the 11th day of MARCH next, at HALF-PAST SEVEN o'clock in the evening precisely, to receive TENDERS for the supply of the undermentioned articles of PAVING and KERBING, severally in a specification and schedule, which may be seen daily, between the hours of TEN and FOUR, at the Surveyor's Office No 10, New end, Hampstead, to be delivered at such places within the said Parish, in such quantities and at such times, as may from time to time be required within the period of twelve calendar months, from the 25th day of March next, viz Yorkstone Paving, Aberdeen and Hexter Granite, Markfield and Hurdlow Paving, ditto to be of the best quality. Tenders, in a printed form, to be obtained at the surveyor's Office, stating the price at per lineal or superficial foot, or both, as specified in the said Schedule, of all or any of the above articles, and the period to be delivered or set under cover, endorsed "Tender for Paving and Kerbing," to be on or before FRIDAY, the 11th day of MARCH next, not later than FOUR o'clock, p.m. of that day. No other will be noticed or received, and no Tender will be received which is not filled up in the printed form of the Vestry. The Vestry do not bind themselves to accept the lowest or any Tender. The contractor will be required to execute a written Contract, and to enter into a bond with two approved sureties in the sum of 500l. for the due performance of the contract.—By order,

THOMAS TOLLER, Vestry Clerk.

Vestry Offices, Workhouse, Hampstead, 24th February, 1864

SAINT JOHN, HAMPSTEAD.—SLOPPING CONTRACT.—The Vestry of the Parish of St. John, Hampstead, hereby give notice that they will be ready at the VESTRY MEETING, to be held at the BOARD ROOM, Hampstead Workhouse, on FRIDAY, 11th day of MARCH next, at HALF PAST SEVEN o'clock in the Evening precisely to receive TENDERS from persons willing to CONTRACT for one year, from the 25th day of MARCH next, for the present Turnpike-road, lanes, courts, alleys, and places comprised in that part of the Parish which lies east and north of the Finchley and Adelaide roads called District No. 2; and from the several paved roads, gullies, lanes, courts, alleys, and places comprised in that part of the said parish which lies east and north of the Finchley and Adelaide roads, including the town of Hampstead, called District No. 1, including also, from and after the 1st day of JULY next to the 25th day of MARCH 1865, the present Turnpike-road, called the London road, commencing at the top of Rosslyn-street, near the old public house known as the "Red Lion," and terminating at a boundary-stone intended to be placed about midway between the "Load of Hay" and the "Adelaide" taverns, the Vestry finding all carts for carrying and sweeping the same roads, lanes, courts, and alleys, and for emptying the street gullies in the same roads. A specification and form of contract may be seen, and printed forms of Tender may be obtained, on application at the office of the Surveyor of the Vestry, No. 10 New End Hampstead, any day before the meeting, between the hours of TEN and FOUR. Tenders may be made for both or either of the Districts. The Vestry do not bind themselves to accept the lowest or any Tender. The Contractor will be required to execute a written Contract, and to enter into a Bond with two sufficient Sureties in 500l. for the due performance of contract, and no tender will be noticed unless attended personally on the day and at the time appointed for the hearing. None but the printed forms of Tender will be received, nor will any Tender be received after FOUR o'clock p.m. FRIDAY, the 11th day of MARCH next. Tenders to be addressed to the Vestry Clerk, endorsed "Slopping Contract, District Nos. 1 and 2," or "Slopping Contract, District No. 1," or "Slopping Contract, District No. 2." By order,

THOMAS TOLLER, Vestry Clerk.

Vestry Offices, Workhouse, Hampstead, 24th February, 1864.

BOARD of WORKS of the POPLAR DISTRICT.—The General Purposes Committee of this Board will meet on TUESDAY, the 8th day of MARCH next, at SIX o'clock in the evening precisely, to receive TENDERS from persons willing to CONTRACT for the execution of REPAIRS to SEWERS, GULLIES, &c., and GENERAL JOBBING WORKS, under a Schedule of Prices in connexion therewith, for one year, ending Lady-day, 1865. ST. MARY, ISLINGTON.—CONTRACTS for PAVING and MATERIALS for the REPAIR of the ROADS, and the REMOVAL of the ROAD SCRAPINGS.—The Highway Committee of this Vestry will meet at the Vestry Offices, Upper street, Islington, on TUESDAY, the 8th day of MARCH next, at SEVEN o'clock in the evening precisely, to consider PROPOSALS for PAVING such parts of the Parish, and REPAIRING and KEEPING IN REPAIR the PAVED FOOTWAYS belonging thereto, as the Vestry shall from time to time direct. Also for supplying the Vestry with GRANITE, BALLAST, GRAVEL and CORE, and CLEAN FLINTS in such quantities and to be delivered at such places, as the said Vestry shall from time to time direct. Also for CARTING the BROKEN STONE, and for a supply of TRAMS and CARTS for the two divisions of the Parish. Also for the REMOVAL of the ROAD SCRAPINGS. The Tenders for the Removal of the Road Scrapings to be separate for each of the Eight Wards, and no Contractor to be permitted to contract for more than two of such Wards; the whole to be contracted for from the 25th day of March next, to the 25th day of March, 1865. Forms of Tender, which alone will be received, may be had, and the Draft Contract may be seen upon application at the Vestry Offices, between the hours of TEN and FOUR daily. All Tenders are to be sealed up and left at the Vestry Offices before the hour of meeting, and no Tender will be received unless it contains a 10*l* Bank of England Note, which will be immediately returned to each person whose Tender is not accepted, but will be retained in the other case until the Contracts and Bonds are duly signed. Persons tendering should be in attendance at the meeting of the Committee. The Vestry do not bind themselves to accept the lowest or any Tender.

JOHN LAYTON, Vestry Clerk.

Vestry Offices, Upper-street.

TO BUILDERS and OTHERS.—ST. MARY, ISLINGTON, in the County of Middlesex.—Notice is hereby given, that a Committee of the Vestry will meet at the VESTRY-OFFICES, Upper street, on WEDNESDAY, the 9th day of MARCH next, at HALF-PAST TEN o'clock in the morning precisely, to receive TENDERS for the DAY and JOBBING WORKS in connexion with the construction and repair of SEWERS and OIL LIKS. The Form of Tender and Contract, which alone will be received, may be had on application to the Surveyor of Sewers (Mr. HIGGINS), at the above Offices, on payment of 2s. 6d. Sealed Tenders must be sent in before HALF-PAST TEN o'clock on the day above mentioned, and no Tender will be received unless it contains a 10*l* Bank of England note, which will be immediately returned to each person whose Tender is not accepted, but will be retained in the other case until the Contracts and Bonds are duly signed. Persons tendering should be in attendance at the Meeting of the Committee. The Vestry do not bind themselves to accept the lowest or any Tender.

JOHN LAYTON, Vestry Clerk.

Vestry offices, Upper-street Islington, 18th February, 1864.

TO CLOCK-MAKERS.—The HASTINGS LOCAL BOARD OF HEALTH are ready to receive SPECIFICATIONS and TENDERS for MAKING and FIXING a good TURRET CLOCK and BELLS in the Albert Memorial clock-tower, in the borough of Hastings. [For design of memorial see engraving in the "Builder," March 7th, 1863.] The following are some of the particulars required:—A Specification stating every particular; four octagon dials, 4 feet 3 inches diameter, of the best description, with plain figures, and to be illuminated; detail drawings for dial to be sent in with the Tender; elevation 37 feet to centre of dial. The movement can be placed on a level with the centre of dials. Floor of clock-chamber 8 feet 10½ inches below centre of dial. The clock to strike the hours on a good bell, also to strike the three quarters on bells, and the Contractor to state the tone and weight of each bell, also a price per lb. if more or less weight is required. Pallet-arms, and Manufacturers of the Mercurial Gas Regulator. Complete Pattern-book and Price-lists 12s.—Nos. 55 and 56, High Holborn.

about 25 feet for descent of weights and pendulum. All ironwork to be provided and fixed by the Contractor, and he will have to keep the clock in repair for two years after completion at his own expense. also to state in his Tender the date when it will be completed. The Local Board will find all woodwork and masonry, and the Contractor to give instructions for the same. By the Public Health Act, the Local Board are bound to require a surety. Sealed Tenders, endorsed "Tender for Clock," addressed to the Hastings Local Board of Health, to be sent in on or before TEN o'clock on MONDAY, the 21st MARCH, 1864. The Board do not bind themselves to accept the lowest or any Tender. ROBERT GROWSE, Town Clerk.

Hastings, February 23, 1864.

PADDINGTON.—TENDERS will be received by the Vestry of Paddington, on MONDAY, the 29th FEBRUARY, before FOUR o'clock p.m. from parties willing to CONTRACT for the execution of the DAY and JOBBING WORKS of every kind required to be performed in constructing, altering, rebuilding, or cleansing Sewers, Drains, Gullies, Watercloseta, Privies, &c. within the Parish of Paddington. Specification and Form of Tender may be had on payment of five shillings per copy, and other particulars obtained from Mr MERRY, Surveyor, at the Vestry-hall, Harrow-road, between the hours of TEN and TWELVE, till the 26th day of FEBRUARY. The Vestry do not bind themselves to accept the lowest or any Tender, and the party whose Tender may be accepted will be required to provide two sureties in the sum of 50*l* jointly and severally, for the due performance of the works.—By order,

FREDERICK AVELING, Vestry Clerk.

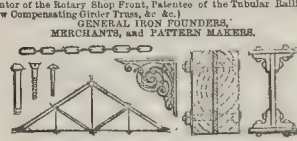
Paddington, Feb. 24, 1864.

TO PAVIORS, STONE MASONS, and OTHERS.—The Vestry of the Hamlet of Mile-end Old Town will meet at the Vestry-hall, Bancroft-road, Mile-end-road, on WEDNESDAY, 2nd day of MARCH next, at SEVEN p.m. precisely, to receive TENDERS for the SUPPLY and LAYING DOWN of NEW PAVING and RELAYING OLD PAVING, in certain parts of the hamlet. The works are to be done pursuant to the terms of a specification, which may be seen at the Office of the Surveyor, at the Vestry-hall, between the hours of TEN and ONE o'clock. The contractor will be required to enter into a contract to be prepared by the Clerk to the Vestry, at the expense of the contractor, not to exceed 6*l* and find two approved sureties in half the amount of his contract for the due performance thereof. Tenders containing the names and addresses of proposed sureties, endorsed "Tender for Paving," are to be delivered at my Office, before THREE o'clock in the afternoon of the day of meeting.—The Vestry do not bind themselves to accept the lowest or any Tender. THOMAS PRICE, Clerk to the Vestry.

Vestry-hall, Bancroft-road, Mile-end road, February 18, 1864.

TO STAIRCASE HANDS. — TENDERS are required for the STAIRS and RAILS to FIVE HOUSES in Oakley-street, King's-road, Chelsea.—Apply to the FOREMAN. The lowest Tender not necessarily accepted.

TO ARCHITECTS and LANDSCAPE GARDENERS.—Notice. In consequence of the very numerous applications by intending competitors for the Prizes offered by the Directors of the ALEXANDRA PARK COMPANY (Limited) for the best DESIGNS for LAYING OUT the Company's BUILDING GROUND, for an EXTENSION of the TIME for sending in the Designs, notice is hereby given that such TIME IS EXTENDED until the 31st day of MARCH, 1864.—By order of the Board,



F. K. PARKINSON, Secretary.

No. 12, Tokenhouse-yard, E.C., February 17th, 1864.

MONTGOMERY COUNTY WORKS.—NEW WING, to 42 Cells, Pentonville System.—The Visiting Justices are prepared to receive TENDERS for the above. The plans, specifications, and conditions may be inspected at the County Surveyor's Office, Kerry, Montgomeryshire, and at the Gaol, on and after the 7th day of MARCH next. Tenders, sealed up, and addressed "To the Chairman of the Visiting Justices, County Gaol, Montgomery," to be delivered on or before the 31st day of MARCH next. The lowest or any Tender will not necessarily be accepted. Two Sureties for the due performance of the works will be required, whose names must be submitted with the Tender. Quantities supplied.

TO BUILDERS, &c.—Notice is hereby given, that plans and specifications for the ALTERATIONS and RESTORATION of the PARISH CHURCH of ST. PETER, Sidlington, one mile and a half from Cirencester, in the county of Gloucester, will be lying at the School-room, from MONDAY, the 7th day of MARCH next, until WEDNESDAY, the 16th, both inclusive; and all parties desirous of contracting for the works must send in sealed Tenders to the Hon. and Rev. JOHN GIFFORD, Sidlington Rectory, on or before SATURDAY, the 26th day of MARCH next ensuing. The lowest Tender will not necessarily be accepted. The contractor, if required, will enter into a bond, with two good and approved sureties, at his own expense, for the due fulfilment of his contract.

COOMBS & McCALL, Dover Iron Works, Staple-street, Long-lane, Borough, S.E. (late H. G. COOMBS 17, Union-street, and 95*l*, Great Guildford-street, Borough, S.E. inventor of the Rotary Shop Front, Patentee of the Tubular Railings, new Compensating Girder Truss, &c. &c.)

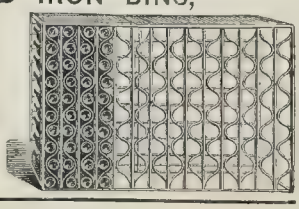
WROUGHT IRON WINE BINS.

FARROW & JACKSON

Beg to call the attention of Architects and Builders to their Wrought Iron Wine Bins, which are ADAPTED (as shown) either for BRICK ARCHED VAULTS or CELLARS with FLAT CEILINGS, the mode of fixing in either case being so simple, that they may be put up by any ordinary workman. They combine great strength with lightness and economy of space, and their DURABILITY has been satisfactorily PROVED DURING nearly FORTY YEARS.



The Shelves are formed of Plates of Iron laid on Bars, which rest on the Cross-bars of the Lattice Uprights, and are removable at pleasure.

Plans and Estimates furnished, and Cellars fitted complete in any part of the Kingdom.

*** As these Bins were the invention of the late Mr. FARROW, and great attention has been given to them by the present Firm, long practical experience enables FARROW & JACKSON to offer the best advice as to arrangement.

ALSO THEIR

NEW REGISTERED IRON BINS,

Made any size or shape, to fit any spare corner, with

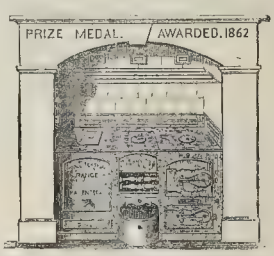
SEPARATE REST FOR EACH BOTTLE,

Peculiarly adapted for Private Cellars.

No laths are required, and all trouble of Binning is avoided. The Cellular Bins may also be had fitted with light lattice doors, affording perfect security to the contents of the Bin.

FARROW & JACKSON,

18, 17, and 16, GREAT TOWER STREET; and 1, HARP LANE, LONDON, E.C.



FACTORY, 57 and 58, MANSELL STREET.

CHUBB'S
WROUGHT IRON FIRE-PROOF DOORS AND FRAMES,

OF VARIOUS SIZES, FOR STRONG ROOMS,

AND ALL SECURED BY CHUBB'S GUNPOWDER-PROOF LOCKS, may be seen at 57, ST. PAUL'S CHURCHYARD.

PATENT WORCESTERSHIRE RANGE.

PRIZE MEDAL 1862, AWARDED FOR EXCELLENCE.

The above RANGE is most complete, and strongly recommended for its unrivalled ECONOMY, CLEANLINESS, CONVENIENCE, DURABILITY, and is a certain CURE for SMOKY CHIMNEYS.

It is an entirely new invention, and consists of large MEAT ROASTER, PASTRY OVEN, and WROUGHT-IRON BOILER. The top forms a HOT PLATE for BOILING, STEWING, &c. The whole heated by ONE SMALL FIRE. One 5 feet wide is equal to an ordinary Range 8 feet wide.

Extracted from the "London Daily Telegraph," May 19th, 1862.

"INTERNATIONAL EXHIBITION, CLASS 31.

"Of the most recent inventions it should be said that Messrs. JONES & ROWE'S Patent Worcestershire Range has attracted very special attention, and has been commended by the best authorities. A valuable peculiarity of their Ranges is the placing of the OVEN and ROASTER one above the other instead of *side* by *side*; and the ROASTER is constantly replenished with fresh air."

INVENTORS AND MANUFACTURERS,

JONES & ROWE, WORCESTER,

AGENTS FOR LONDON: BARRON, SON, & WILSON

436, STRAND, W.C.

Illustrated Catalogues, with Testimonials and Prices, forwarded on application.

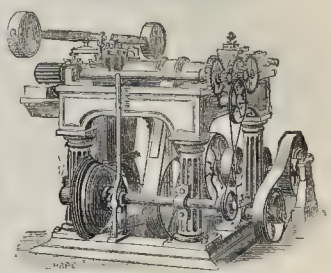
The usual trade discount allowed, as at their

MANUFACTORY and CITY SHOW ROOMS, 147, HOUNDSDITCH, CITY.

THE DENNETT ARCH.

Allowed to be the cheapest fireproof construction known, and used with the greatest success for the last ten years in the Midland Counties, and has been adopted by G. G. Scott, esq. for the New Foreign Offices, used in any form of arch, groin or dome; turned to any length, width, or height, forming a perfect floor and ceiling in one mass, from 24 inches in the crown to any required thickness.



Address to the Patentees,—A. & R. DENNETT & CO. NOTTINGHAM.

TESTIMONIAL.—"I have made use of Messrs. Dennett & Co.'s material for Fireproof Arching, and though I have, happily, had no practical experience of its efficiency as against fire, I can bear witness to its strength, and its extreme convenience of application. I have made use of it in positions in which I should have found it difficult to introduce any other fireproof material, and it has this advantage, that the arches constructed of it are so entirely in one mass that they cover the space like a compact shell or inverted basin, and are, consequently, almost wholly free from lateral pressure.
"GEO. GILBERT SCOTT, 20, Spring Gardens, London."

POWIS, JAMES, & CO.

SAW MILL ENGINEERS,
Victoria Works, Blackfriars road, London.

No. 18, KING-STREET, SNOW-HILL, LONDON, E.C.

SMOKY CHIMNEYS.
S. DEACON

Respectfully invites the attention of Architects Builders, &c. to his

PATENT LOUVRE CHIMNEY CAP,

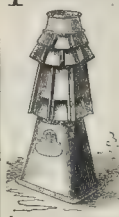
which has been in use some time with perfect success, many curing chimneys where other caps have been of no avail.

The advantages attending this Cap are—it can be thoroughly cleaned by the machine when the chimney is swept, the brush being able to pass through the Cap without the liability of misplacing it; an increased up current, and the impossibility of a down one.

Prospectus, with testimonials, forwarded on receipt of Postage Stamp, by

S. DEACON,
59, ALMA STREET, HOXTON, N.
MANUFACTORY:
HEMSWORTH STREET, SAINT JOHN'S ROAD, HOXTON, LONDON, N.

SMOKY CHIMNEYS.
WOOD'S
PATENT CHIMNEY-TOP



Is simple in construction and certain in effect. It has a good shape, is durable, and easily swept by the sweeps' machine.

Price 30s.

Sent to all parts of the kingdom upon receipt of money order, addressed to the

PATENTEE, CAMDEN MANUFACTORY, CHISLEHURST, KENT.

THE PATENT UNIVERSAL
CHIMNEY HEAD.

This Chimney Head has been designed for the Prevention of Smoky Chimneys and Down Draughts. The numerous side apertures are so placed as to guide the wind upwards, as it strikes the head from any quarter, thus creating a strong current, and assisting the exit of the smoke through the top. The same apertures give ready egress to the wind on all sides in case of its striking downwards from above, and thus greatly diminish the danger of its passing down the chimney.

Price in Zinc..... 25s.
Ditto, Kitchen size .... 32s.
Price in Galvanized Iron 25s.
Ditto, Kitchen size .... 35s.

A Liberal Allowance to the Trade.

KITCHEN RANGES.—BROWN

BROTHERS' are the best adapted for heating BATHS, CONSERVATORIES, &c. and perfectly performing every other culinary operation. Require little or no fixing, save half the coals, cure smoky chimneys. The only Range which can use the Patent Automaton Roaster. In operation daily at the Depôt—LONDON: 45, CRANBOURN STREET, W.C. Illustrated Catalogue post free. Hot Water Apparatus for Buildings.

RICKETT'S & HAMMOND'S
VENTILATING GLOBE LIGHT,

combining an agreeable method of lighting, with convenient simple, and efficient ventilation.

The advantages obtained are these:—
A TOTAL REMOVAL OF ALL PRODUCTS OF COMBUSTION.
A COMPLETE DISPLACEMENT OF HEATED AND VITIATED AIR.
AND A CONSIDERABLE ECONOMY IN THE CONSUMPTION OF GAS.
A GLOBE LIGHT will consume 5 to 7 feet of gas per hour, giving as much light as an ordinary three-light chandelier, with a consumption of 12 feet per hour.

SUPPLIED WITHOUT CHARGE.

HUBBUCK'S PATENT WHITE ZINC PAINT.

By their process, which is patented, pure Zinc Paint is Cheaper than White Lead. It does not change colour with the London atmosphere.

ADULTERATIONS.—Some Paint Grinders have been selling Zinc Paint adulterated with Sulphate of Barytes from ten to thirty per cent with the addition under the name of "Improved Zinc Paint," or as the number Two or Three qualities, no workman can produce good work with such material. Workmen who have once used the Patent Zinc Paint will never willingly use any other Paint for their best work.

CHEAPNESS.—Not only is it cheaper per hundred weight, but two hundred weight of this Paint, with six gallons of oil covers as much surface as three hundred weight of white lead and twelve gallons of oil.

EACH CASK IS STAMPED "HUBBUCK, LONDON, PATENT."

THOMAS HUBBUCK & SON,
WHITE LEAD, OIL, PAINT, AND VARNISH WORKS, 24, LIME STREET, LONDON.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 32 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO.'S PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c. and deadening Sound.

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c. preventing the radiation of Heat, saving 25 per cent. of Fuel.

Samples, testimonials, and full instructions, on application to

CROGGON and CO. 2, DOWGATE-HILL, London; and 2, GOREE PIAZZA, Liverpool.

CONTRACTORS FOR ROOFING THE GREAT EXHIBITION BUILDING OF 1862.

By Her Majesty's Royal Letters Patent.

F. McNEILL & CO. of LAMB'S BUILDINGS, BUNHILL ROW, LONDON,
Manufacturers and ONLY Patentees of
THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.
Patronized by

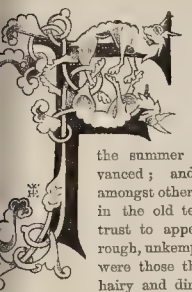
HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSIONERS OF CUSTOMS,
HONOURABLE EAST INDIA COMPANY,
HER MAJESTY'S WAR DEPARTMENT,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK.

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland, at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural Society's House in Hanover square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non conductor of heat and sound. The Felt can be cut to any length by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its use, and the manner of application, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen, who have extensively used it, sent free to any part of the town or country. DRY HAIR FELT, for covering Boilers, &c is also manufactured, by which a saving of about 25 per cent. in fuel is effected. The TRADE are respectfully entreated to send their orders DIRECT to the FACTORY, as the surest means of being supplied with a good article, and at lengths best suited to their roofs. The original works where the above roofing is made are F. McNEILL & CO.'S Manufactories, LAMB'S BUILDINGS, BUNHILL ROW. Roofs covered with McNEILL'S FELT to be seen at the CAMPS of ALDERSHOTT, CURRAGH, SHORNCLIFFE, and COLCHESTER, upwards of Three Millions of Feet; also the GREAT EXHIBITION BUILDING of 1862, of nearly One Million Feet. A Liberal Discount allowed to the Trade.

FIRST-CLASS SECURITY. — The STRAND MUSIC HALL COMPANY, Limited, is now issuing MORTGAGE BONDS of 50*l.* each, being a first charge upon the property of the Company, repayable in three years, and bearing interest at 10*l.* per cent. per annum, payable half-yearly. Apply at the Offices of the Company, 345, Strand, W.C. or to Mr. G. T. TAYLOR, Stock and Share Broker, 11, Tokenhouse-yard, E.C. — By order of the Board, FREDERIC LAWRANCE, Secretary.

TEN THOUSAND POUNDS READY TO BE ADVANCED by the TEMPERANCE PERMANENT LAND AND BUILDING SOCIETY, on Freehold or Leasehold Property, for any period of years not exceeding fifteen, the mortgage being redeemable by equal monthly instalments. Interest (in addition to a small premium), 5 per cent. on the balance each year.—Apply to HENRY J. PHILLIPS, Secretary.
Offices, 34, Moorgate-street, London, E.C.
NOTE.—More than a quarter of a million pounds sterling have been advanced upon house property alone.

MONEY on FREEHOLD and LEASEHOLD PROPERTY, by the MUTUAL LOAN FUND ASSOCIATION (Incorporated by Act of Parliament, 1850), 14, RUSSELL STREET, Covent Garden, W.C. Advances from 100*l.* to 1,000*l.* upon Freehold and Leasehold Property for any term up to ten years. Mortgages redeemed, and the advance can be repaid by easy instalments. Facilities afforded to tenants to purchase the houses they occupy, and the repayment of the advance taken as rent. Greater advantages are offered to borrowers than in building societies, there being no shares to subscribe for, or competition for an advance, and no deduction from the loan. No preliminary fees. Prospectus and forms of proposal sent on receipt of a directed stamped envelope.
EDWARD HARPER, Secretary.



MONEY.—IMMEDIATE CASH ADVANCES MADE ON
FREEHOLD, LEASEHOLD, and COPYHOLD PROPERTY
TIMBER, WINE, and SPIRIT WARRANTS.

The Builder.

VOL. XXII.—No. 1099.

"Going Along." Geneva and Home.

ROM tranquil Villeneuve we rail round the crescent-lake to Geneva, falling in again with hosts of tourists, the summer having now advanced; and strengthening, amongst other gains, our belief in the old teaching, "not to trust to appearances." How rough, unkempt, and ill-dressed were those three Englishmen, hairy and dirty, who lounged the carriage, seeming to have no eyes for at was around them: and yet how well y showed in botany, geology, and antiquities, en accident and a clever little woman waked m up and brought them out of their shells: n of the Muscular-Christianity school, and ve nothing. Still, why hide within such a ty crust?

The management of this line is not first-rate, d the porters are eminently inattentive. Aring at Geneva in a shower, passengers anxious, erefore, to obtain conveyances, not a man of se said porters would trouble himself to lift much as a bundle of cloaks!

In and around Geneva, the builder and imver, as we have had occasion to say more n once elsewhere, are at work. In the neighurhood of the *Jardin des Plantes*, and the blic Gardens, a pleasant part of the city, some e houses are in course of erection beyond the stion. Here, too, a bridge has been erected er a lower road, with flights of steps down m it. In another part, a Russian church has en commenced, which is to be full of cupolas, me say eight, as is the Russian's wont. It ll give a fresh feature to the town. The glish church here is a nearly new Gothic ifice, of fair character, especially outside: thin, a little more money might be usefully ent to deprive it of its white-washy aspect. n the Sunday it was filled with our countryen and country-women, a pleasant sight in a reign land, and the service was well perrmed.

In the *Jardin Anglais*, which is separated from e lake only by a light iron railing, a handsome onze fountain has been erected quite recently. ourlarge figures—one of Commerce, and another, n old man, possibly a personification of the hone,—are grouped around the pedestal which upports the central basin. The water from is flows through holes a little below the brim, nd falls into the lowest and largest basin; while oove, four chubby children holding hands, surund the support of the uppermost and smallest sin, an urn-shaped ornament surmounting the hole.

The gardens looked rather new, the walks tony and loose; but the flowers were most luxuiant, including parterres of perfumed heliotrope, eset with bees and butterflies; bright, sparkling, nany-coloured phlox; marvellously-scarlet verena; handsome balsams in profusion; and magificent roses.

The path by the lake is very pleasant, giving view into the singularly clear water, where myriads of small fish disport themselves, darting n and out of cracks and crannies in the huge ocks below; while a handsome swan sails majesically along, as if accustomed to be fed and petted by loungers in the garden. In among the vessels, a few yards to the right, two huge lumps of rock stand up dangerous and defiant, in strange proximity, one of which is known as the altar of Neptune, tradition speaking of sacrifices offered on it to the water god. The quays around have been greatly improved, and the houses have a good face on them. And yet it can scarcely be said that Geneva is in all things flourishing. The staple trade of the city, watchmaking, has been much disturbed of late years, and is still depressed. The number of watches made here has always been over-stated; many of the watches made in Neuchâtel and other parts of Switzerland, where are produced enormous numbers, being attributed to Geneva. In 1848 political events paralysed the trade. In 1851, Great Exhibition year, it revived, and it is calculated that about 65,000 watches were made in the twelve months,—a number which may be taken as the annual average of Geneva's best time. In 1860 the number turned out was about 40,000, and in 1861, 10,000 less. There is a law in Geneva which prevents the sale of a watch whereof the gold is not of a certain high degree of purity, and this of course gives an advantage to the less scrupulous makers in other parts of Switzerland, in markets where inferiority is not discovered; but in the end, the guarantee which the law in question thus affords the purchaser of a genuine Geneva watch, will bring back buyers and restore prosperity to the trade. The world, moreover, will always help to support Geneva: its lake, lovely position, charming suburbs, and past history attract visitors of all nations. Calvin, Cranmer, Lesage, Saussure, John Knox, Necker, Rousseau, Voltaire, Byron, and Sir Humphry Davy are some of the ghosts that haunt its streets and buildings. The cathedral, not half so well known as it deserves to be, and of which anon, takes back those who see with the mind eight hundred years,—to a time *before* Geneva fell under the sovereignty of the Emperors of Germany. And as to the hills around, of what time do they tell? On the Lago Maggiore we first got sight of the second of European mountains; on Lake Leman, its master comes into view:—

> "Mont Blanc is the monarch of mountains,
> They crown'd him long ago:"

and although his high mightiness does not condescend to be very often visible there,—about once in every six days is the average of the year,—when he does show it is a sight to remember. What is it Coleridge hymns on viewing "Sovran Blanc" before sunrise,—

> "O dread and silent Mount! I gazed upon thee
> Till thou, still present to the bodily sense,
> Didst vanish from my thought: entranced in prayer
> I worshipp'd the Invisible alone.
> Yet, like some sweet beguiling melody,
> So sweet, we know not we are listening to it,
> Thou, the meanwhile, wast blending with my thought,
> Yea, with my life and life's own secret joy;
> Till the dilating Soul, enrapt, transfused,
> Into the mighty vision passing,—there
> As in her natural form, swell'd vast to Heaven."

The water of the Rhone, which divides the town into two parts, and, in conjunction with the lake, has led to the construction of a whole *rendezvous* of bridges, with an island and a statue of Rosseau in the midst, is certainly wonderfully blue; and where it first issues out of the lake, rattling and tumbling over certain artificial arrangements, strikes the eye marvellously. It does not keep its brilliant colour long. From the grounds of a little country-house, about a mile and a half from the town, the brown muddy Arve may be seen creeping into the clear bright blue Rhone, at the point of a narrow tongue of land; and odd enough is the effect produced. The two rivers glide on side by side for a time without intermixture, obviously apart; but soon dirt triumphs, and the streams are no more distinguishable;—the Rhone retains its name, absorbing the Arve, but losing its purity and beauty. It seems too bad that, having washed itself and deposited its own dirt in the Lake of Geneva (thus gradually but appreciably lessening the lake's depth, by the way), it should so soon be again contaminated.

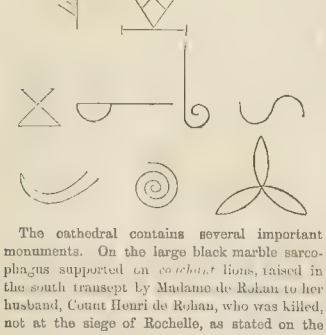
Sir Robert Peel has a pretty seat not far from this spot; and Baron Rothschild a château of larger pretensions, which forms a good object as seen from the lake.

Returning to the town, the steam-boat is starting, and we may as well get a general notion of "clear, placid Leman," at some distance from Geneva, and of the villages on its banks. We cannot agree with Voltaire, who said his lake, meaning this, was "the first,"—A 1. The extent, the smiling character of the surrounding country, the Alps on one side at a distance, and the Jura chain on the other, with Mont Blanc now and then, and the memories which haunt the lake always, make it attractive and delightful; but for picturesque and varied beauty, now smiling, now threatening, it certainly cannot compare with either the Lago Maggiore or that of Como.

Coppet, on the north bank, the retreat of Necker and of Madame de Staël, soon comes into view. It was to the large rambling château here that Madame de Staël retired when first banished from Paris by Napoleon. Talleyrand, her friend, was to communicate the edict to her, and he did it after this fashion: "I hear, Madame, that you are going into Switzerland." "Oh, no! you are wrong," said she, "I have no such intention." "Pardon me," was the rejoinder, "I am told, on the *very best authority*, that you will quit Paris in three days." And so she went to Coppet. As long as she could have friends around her there the place was endurable; but when those she loved best were exiled for visiting her, stay became impossible, and other countries were sought. Friendship was a passion with her; any diminution of it on the part of those she prized brought down reproaches. "Your friends," once said Madame de Saussure to her, "have to endure charges of coldness and neglect every morning." "What, odds," was the reply, "if I love them the better every evening? I would go to the scaffold to assure myself of the friendship of those who accompanied me." The life of this remarkable woman, whom Byron called "the incomparable Corinna," was a mixture of triumph and distress; of splendour and misery. An equal power of uniting around her distinguished men of all shades of opinion has perhaps never been possessed by one woman: and amongst them she found her happiness.

Nyon, which follows soon after Coppet, has Julius Cæsar for a founder, and still shows relics of the Roman domination. Near this place, where the lake opens out to its full width, a residence has been built for Prince Napoleon, half *quasi* Gothic and wholly ugly. It has a chimney shaft in the centre of the front, and a little tower that looks as if intended for a water-tank. France should have done better.

Rolle, having a monument to General La Harpe on a small planted island in the lake; and Morges, with its ancient square donjon, of brick, lofty and large, are seen; and then comes Ouchy, where we land, to walk once more through and about the noble and finely-placed Cathedral of Lausanne: in due time again taking to the boat to return to the *Hôtel de l'Ecu de Genève*.



The lights on the several bridges and the quays, further reflected in the water, and a sky bright with a myriad stars, make a pleasant picture from the balcony, to which the balmy air soon draws us. If one really *could*

> ——"Hold a fire in his hand,
> By thinking on the frosty Caucasus;
> Or cloy the hungry edge of appetite,
> By bare imagination of a feast;"

the recollection of such an evening would make endurable even a shivery day in London fog.

Besides the division of the city by the Rhone, the main portion, lying on the south side of the

river, is again divided into the upper town and lower town: and toiling up to the former to reach the cathedral, the houses there are seen to be older and larger than those in the lower town: they accord much better with the stirring incidents, *escalades*, and such-like, that belong to the Mediæval history of Geneva. A huge Corinthian portico added on at the west end of the cathedral, promises little; but get round to the east end, and so into the building, and a noble structure opens to view. The plan is a Latin cross, with polygonal east end: the lower part of the building throughout has semicircular arches, on columns, with Romanesque capitals: the upper part is Pointed. At the extreme east end (using this term here as we have done throughout these notes as conveying a clear impression to English minds, and not as asserting that the churches we have had occasion to describe are all placed due east and west) we find arcading of earlier date than the rest of the church. The arches spring from pilasters which are fluted, and in other respects approach the Classical: some of the capitals exhibit more than usually beautiful Romanesque foliage, and others a figure under a canopy. Occasionally, the flat pilaster is covered by the later shaft, built up to carry the groining of the roof. The commencement of the building is popularly ascribed to Conrad I., who died in the year 918. The stones, both of the earliest and the later work, and as well in the triforium and clerestory as below (though not so obviously at the west end as elsewhere) show a large variety of Masons' Marks, some of them apparently "doctored" by the gossipping custodian, who has a theory of his own concerning them. To the practised eye, however, any alteration in them is at once evident. Amongst the Marks here are seen the pentacle, the V and reversed V, the N form and some other of those which have been found on buildings of all ages and many countries. We engrave a few of the less general forms, selecting those which we found also used in Lausanne Cathedral. The first of them, formed of parts of three circles, is on the earliest portion of Lausanne, and on the later semicircular work of Geneva.

The cathedral contains several important monuments. On the large black marble sarcophagus supported on *couchant* lions, raised in the south transept by Madame de Rohan to her husband, Count Henri de Rohan, who was killed, not at the siege of Rochelle, as stated on the spot, but at the battle of Rheinfelden, a hideous plaster figure, seated, with baton in the right hand, and resting on his knee, has taken the place of a white marble statue of the count, which was destroyed at the time of the French Revolution in '93. His armour, a fine suit, beautifully preserved, and also sent by the widow, lies on the sarcophagus. In the opposite transept, by the way, may be noticed on the door leading to what is now a vestry-room, some ornamental iron-work, gilt, which is nailed on, the door itself being painted red: it takes the shape of corn, with acorns and cardinals' hats intermixed. The canopy of the pulpit is dated 1402; and under it is shown the chair used by Calvin, almost triangular in shape, and with carved pateræ and arms upon it.

Calvin was long a name of power in Geneva. Passing through it a wanderer, accident detained him there, and in a brief period he became to all intents and purposes its master, ruling with an iron hand for nearly a quarter of a century. His power of work was astounding. Under one of his laws, made three hundred years ago, there was no theatre in Geneva until recently. At the present time, however, representations are given even on *Sunday*.

And now for Macon by rail, and so to Paris for home. About twenty miles from Geneva you get a very long tunnel, and then come Bellegarde and French custom-house officers. Here, in dark station, "cabin'd, cribbed, confined," we ran against "Ulster" (amongst other acquaintances), returning to his capital, and Carlisle: even the gracious Burke, however, in this place could nothing find Sublime or Beautiful.

On, through Seyssell and its asphalte to Oulos, whence the rail branches off that will run to Turin through Mont Cenis when the great bore is achieved. The works are going on well, and we shall be surprised if the Alps exist, so far as travelling into Italy be concerned, six years hence.

There is not much to see on the road; and if there were, it could not *be* seen for the trees which line the sides. *Nota Bene*: the planting of trees on railroads is a mistake. Use the slopes of cuttings for arboricultural and agricultural purposes if you will, but don't plant trees at the top edges of embankments!

At Macon, where we sleep, there is a bridge of nine arches over the Saône. The remains of the former cathedral, too, are curious, and worth hunting out. The interior portion remaining is Romanesque strangely altered. There is an opening with a large semicircular arch opposite the altar, having five ranges of figures in it and a vesica piscis. A new market has been built, near these remains, and is ugly enough. Again taking the road, Chalons-sur-Saône, amongst other places, is passed, and we find as the most noteworthy thing, many new residences building there and elsewhere on the route, and the extensive construction of quay walls going on, to make rivers navigable. And then, coming once more into the glittering capital of France, we abandon, so far as this series is concerned, the half-threat made in our first chapter, to say something more of modern doings there; rush over to—

> "That pale, that white-faced shore,
> Whose foot spurns back the ocean's roaring tides,
> And coops from other lands her islanders;"

and end at once our "Going Along."

These notes, all too short as they have been for the many subjects touched, have already run out to greater length than was intended. Let us hope they have not been found *too* long. Two days are wanting to complete the six weeks we took at starting, and we have looked into France, Bavaria, Southern Germany, Austria, Tyrol, Venetia, Northern Italy, and Switzerland; signalizing some of the buildings, works of art, and natural beauties that are prominent, and showing our younger readers, as was the chief aim at starting, what long distances may be travelled and how many things may be seen in a short time. Such journeys give the mind materials to work on; lead to fresh combinations, fresh ideas: recollections and bright pictures are garnered up that never wholly depart, but assert themselves, often unexpectedly, in later years, stimulating, perhaps, in moments of less energetic life, or illustrating and giving additional brightness to epochs of fresh enjoyment. The ruin comes back to us peopled: we again see with the eyes of youth, and at the same time profit by the teaching and warning such recollections bring. There are ever some notes of solemn music in the voice of past days, let the voice sing as gaily as it may.

MR. McCLEAN'S ADDRESS, AS PRESIDEN OF THE INSTITUTION OF CIVIL ENG NEERS.

In the course of his address, on taking t chair for the first time after his election, t President said,—

The progress of engineering science h been so fully recorded by my distinguish predecessors in office, that I propose on t present occasion, instead of describing any eng neering works, to point out the extraordina effects these works have exercised during t last thirty years, in promoting the material a intellectual progress of Great Britain, and i creasing the comforts and social enjoyments all classes of its inhabitants. I will endeavo to show that the wonderful prosperity attain during that period is to be attributed mainly our railway system, which has enabled us develop the mineral resources of the countr and at the same time to provide secure a reproductive investments for the profits realiz by the successful working of the system.

It is a prevalent opinion, that the increas prosperity of the country to which I refer h been the result of improvements in the cultiv tion of the land, better drainage and farmin and in consequence of the railway system havi provided better means of access to markets a places for disposing of the products of the so and obtaining suitable materials for renewi its fertility. In order to show the incorrectne of this opinion, it will be necessary to refer the reports of the Commissioners of Inla Revenue, which give returns of the property a income of Great Britain, at two different perio especially suitable for the comparison I wish make; one before the works of the civil engine had attained much importance, and the other aft the successful application of the steam-engine locomotive purposes had led to the constructi of our present magnificent system of railways.

The years selected for the purpose are 18 and 1856, the return of the property and incon of the country being fully given for those yea in the reports of the Commissioners. Beside the year 1815 was the last year of the incon tax in which accurate statistics can be obtain of the prosperity and income of Great Britain. was also the last of a long series of years of wa during the whole of which the property a income tax had been in operation; and, as t financial necessities of the Government we great, we may safely accept these returns accurate, and rely that no source of income property which could be brought within t operation of the Chancellor of the Exchequ has been omitted from the account, a allowed to escape taxation. It was, moreover, period in which most of the great discoveries of t engineer, except the locomotive engine, were full operation. The steam-engine, as improv by Watt, had been in operation forty yea before, pumping water from mines, raising min rals, and providing motive power; and Arkwrig and other great inventors had perfected t machines employed in textile manufactures, a had brought them into general use.

In the returns referred to we find each sour of income under a separate head; and, in ord to make the comparison as simple as possible, take in all cases the amount of the tax und that head as the measure of the value of t property or income assessed, as set forth in t following tables:—

Tables of the Net Amount of the Property and Inco of Great Britain, from all Sources, liable to Assessm for Taxation in the Years 1815 and 1856.

Table No. 1.—Year 1815.

Land,—Land, tithes, manors, fines	£11,521,492 0
Houses (exclusive of farmers' houses)	16,259,100 0
Profits on realized property,—Quarries, mines, ironworks, &c.	1,452,104 0
Farmers' profits	21,762,280 0
Funds	30,048,620 0
Profits of trade and professions	30,211,880 0
Government Departments	11,132,450 0
Total	£152,388,226 0

Incomes and profits exempt under 50*l.* per annum during this year.

Table No. 2.—Year 1856.

Land, — Land, tithes, manors, fines, fisheries	£38,153,935 0
Houses (exclusive of farmers' houses)	48,435,585 0
Profits on realized property, Quarries, mines, ironworks, canals, railways, gasworks, and other property	18,087,963 0
Farmers' profits	24,224,143 0
Funds	24,407,360 0
Profits of trade and professions	74,551,046 0
Government Departments	14,607,036 0
Total	£242,467,383 0

Incomes and profits exempt under 100*l.* per annum during this year.

In table No. 1 we find, that in the year 1815, or forty years after the steam-engine had been improved and used for saving labour and producing motive power in connexion with mining and manufactures, the whole annual income derived from quarries, mines, iron works, and other property, was only 1,452,104*l.*

In tables Nos. 1 and 2 we find the net income available for taxation, derived from land, and the profits of the farmers, taken together, in 1815 to be 63,283,772*l.*; whilst in 1856 it was only 62,378,378*l.*

The net income derived from houses during the same period, had increased from 16,259,400*l.* to 48,435,585*l.*, an augmentation of 32,176,185*l.*, or nearly 300 per cent.

The net profits derived from mines, quarries, ironworks, canals, railways, and other profits, had increased from 1,452,104*l.* in 1815, to no less a sum than 18,087,963*l.* in 1856, or upwards of 1,200 per cent.

From these figures we learn that, during the forty years over which the comparison extends, the profits and income of land together had not increased, notwithstanding the construction of roads, railways, canals, and other public works, and the relief from poor-rates afforded to it by the extension of the rate on other property, and by the absorption of the increased population in new occupations (as shown by the Population Returns), the number of labourers employed on the land at the Census of 1861 being less than in the year 1815. No doubt the condition of all classes connected with the land, including the landlord, farmer, and agricultural labourer, had improved during the period in question, and much capital had been expended in farm-buildings, drainage, and machinery. Yet the net annual income available for taxation in 1856, derived from land and farmers' profits, was not greater than in 1815, although the income derived from all other sources of property, during the same period, had largely increased, as we find in the tables,—the net amount of income derived from the profits of trades and professions available in 1815 being 30,211,880*l.*, and in 1856, 74,551,046*l.*, showing an increase in the latter year of nearly 150 per cent., the exemptions from income tax being under 50*l.* per annum in 1815, and under 100*l.* in 1856.

In these tables we also find the total net amount of income derived from all sources available for taxation in 1815, to be 152,388,226*l.*, and in 1856, 242,467,368*l.*, showing an increase of 60 per cent., or upwards of 90,000,000*l.* (which, on the basis of the taxation of 1815, would have yielded 9,000,000*l.* additional tax), from sources independent of the land.

I will now attempt to point out the causes of the enormous increase of the income of Great Britain, shown by the tables, representing the profits of many hundreds of millions sterling invested in railways, canals, mines, ships, and other works, in this country, in India, and in our colonies.

Fortunately the railway system, since the introduction of the locomotive engine, improved by Stephenson, gave it vitality, has been a complete success, in the reproduction of capital, in the enormous saving in the cost of transport, and in the facilities it affords for the development of mines, and of nearly all branches of national industry.

After the opening of the Manchester and Liverpool Railway, the accumulated wealth of Great Britain, which, previous to that time, had been but sparingly invested in public undertakings, and was for the most part hoarded or placed on doubtful securities, was thrown lavishly into the railway system; and, although for a time this led to the belief that the supply of capital for the construction of such undertakings was inexhaustible, and induced excess of speculation, temporary distress, and subsequent distrust in the system; yet the progress of railways ever since that period has been steady, and a reproductive profit has been assured on a capital of nearly 400,000,000*l.*

This vast capital has been created because railway securities, on the principle of limited liability, occupy the highest place in public estimation for investing the realized profits of the country, in consequence of the facility with which they can be purchased, and transferred in amounts suited to the requirements of every class of society; and this leads to a constant accumulation of capital by inducing people to save a portion of their income,—not merely for their own support in an after-period of life, but for the benefit of their descendants. Thus railway securities afford the means of transmitting wealth, as printing does knowledge, from one generation to another.

The beneficial effects of the railway system has not been confined to Great Britain. Before the introduction of railways, the land was nearly the only safe means in Europe for the investment of capital: and, in consequence of the competition for this security, the interest was reduced to a minimum rate, and was barely sufficient to induce people to save a portion of their income. The construction of railways, by inducing saving, has established a wealthy and educated middle class in most countries in Europe, who have not only developed the industrial resources and increased the capital of the country to which they belong, but have also, as in this country, promoted education, and humanized the conduct of all classes of the people.

I have only one more remark to make on railways as a cause of the increase of wealth. The land occupied by railways in Great Britain is under two hundred thousand acres, including stations and other conveniences; and to obtain possession of this land it has been necessary, during every session of Parliament for the last thirty years, to engage the services of the ablest counsel and the most eminent engineers in the committee-rooms of both Houses, at an incalculable expense. The land used for agricultural purposes is about forty million acres, and yet the railway system, occupying only about one half per cent. of the total area of the land, now pays nearly as great an amount of Income and Property Tax as is paid by the whole of the farmers of Great Britain.

Another source of wealth is the great deposit of coal and iron-stone, and other minerals, in nearly every part of the kingdom.

The most important of these is coal. The quantity of coal raised in Great Britain is now about one hundred millions of tons yearly, produced by the labour of about three hundred thousand men.

We are indebted to Professor Liebig, the celebrated German chemist, for data by which we can estimate the value of this enormous quantity of fuel, by comparing it with wood, or any other produce of the soil.

Liebig informs us that every acre of fertile land will produce yearly about two tons and a half of wood, or other crop, which contains about the same quantity of carbon (80 per cent.) as one ton of coal. The one hundred million tons of coal now raised annually from our mines contain about eighty million tons of carbon: and to produce the equivalent of this in wood would require one year's growth of, in round numbers, one hundred millions of acres of land,—an area about four times larger than the arable and pasture land of England (which does not exceed twenty-five million acres), and as nearly as possible equal in extent to the area of the kingdom of France. Yet this supply of fuel, even if it existed in the form of wood, would be practically useless as a substitute for coal: the labouring population of the kingdom would be unable to cut and convert it: the whole of our railways and canals would not suffice to transport it; while the cost of these operations, if no other obstacle intervened, would prevent them from being carried on beneficially.

The development of coal, then, is mainly the cause of the increase of wealth; but if railways had not proved reproductive investments, this mineral would have added little more to the wealth of Great Britain than it did in 1815, as shown by Table No. 1.

The serious question as to the permanence of this fuel, on which the wealth of the nation so much depends, has been prominently raised. Since the great discovery of Murchison that coal underlies, and may be found with reasonable certainty under, the lower new red sandstone and permian formations, which extend over millions of acres of Great Britain; and, if beneath them, at greater depths, under all the measures which overlie the permian, and which together comprise upwards of one-half of the area of Great Britain, we may consider our coal-mines to be practically inexhaustible, and that we have not to fear any deficiency in quantity arising from the exhaustion of the mineral, but rather the practical difficulty of obtaining it from a great depth below the surface, in consequence of the central heat of our globe; which it is alleged will ultimately, and within a defined and not distant period, reduce the production to a limited supply.

Much may be said in support of the theory of central heat, but I think undue importance has been given to it, as a difficulty in mining operations. A comparatively thin coating of clay, or fire-bricks, surrounding a blast furnace filled with molten iron, affords such protection that the hand may be placed without inconvenience on the outer surface of the brickwork; and it is difficult to understand how any internal heat can penetrate through the crust of the earth,—estimated to be thirty-four miles in thickness,—so as to interfere with the temperature at the comparatively small depth from the surface at which mining operations are carried on. I am of opinion that the heat, which undoubtedly exists in some mines, arises, not from central heat, but from superincumbent pressure, and defective ventilation. The gases in the coal are highly compressed, and, when liberated by mining operations, are at a high temperature; but we know that with large shafts air may be conveyed to any depth that has yet been reached in mining operations, without in the slightest degree altering its temperature; and that by a proper enlargement of the air passages, air descending the shaft may be distributed through the workings, so as to lessen the liability of accident from explosion, or serious inconvenience from heat, at any depth to which shafts can be sunk. The system of sending compressed air down the shaft by means of water is found to abate inconvenience in deep mines owing to an excess of temperature.

I therefore think that the time when we shall experience a want of coal, arising from exhaustion, or from difficulties occasioned by the depth of the mines, or an excess of temperature, need not at present in any way influence our conduct in the development and use of that important mineral; especially as the power (which is the substitute for labour) derived from coal is so cheap, that we are enabled to consume daily for our domestic comforts, for machinery in the conversion of minerals, and for other manufacturing processes, and for export, a power equal to twelve millions of horses, at a cost, at the mine, of not more than one penny per horse-power, working ten hours a day; and no saving in consumption of this enormous quantity of coal can be made, except by employing more expensive labour as a substitute.

With this power at our command the cost of sinking to, and of raising minerals from, the greatest depths, is inappreciable; while the intrinsic value of coal, when compared with any other fuel, is so great that it may be drawn profitably from almost any depth,—the only limit being the strength of the machinery and materials required to raise it. . . . . .

I will now make a few remarks on the extension of the railway system, and especially on the construction of the proposed new lines in the metropolitan districts. It is evident that Parliamentary sanction will not be given to all the lines which have been suggested; but the convenience of the public, and the necessity for relieving the streets of the heavy traffic passing to and from the present railway stations, require that some of these lines should be constructed without delay. The success of Mr. Fowler's Metropolitan line, due to the talent exhibited in its construction, as well as to the tenacity of its promoters in overcoming all difficulties,—those of finance not being the least,—has proved that railways in the metropolis can be made a source of profitable investment.

Much has been said as to the destruction of property which, it is assumed, will result from the execution of the proposed metropolitan extensions; and the question has been discussed as if the property taken were wasted or destroyed, forgetting that it is only a change of occupation, and that the houses pulled down will, in many cases, be much better restored, in accordance with modern sanitary improvements, or the sites will be applied to more profitable uses, tending to the general improvement of the metropolis, the convenience of the public, the relief from local taxation, and the better occupation of the working classes.

The construction of these railways, by means of private funds, is less objectionable than by funds derived from a tax on the coal and wine dues, or any other mode of local or public taxation. If public funds were to be resorted to, the works now so much needed would never be executed, as the enormous capital required would prevent either local boards or the Government itself from undertaking them. Besides, it is only right that those who use these railways should pay for them, and not people living remote from the metropolis, who may never enjoy them.

Occasionally unproductive works of national importance, such as the Thames Embankment

may be executed at the public expense; but the principle of Government construction is inadmissible in this country, in the case of railways or any other public work which can be rendered reproductive by private enterprise.

THE LADIES' SANITARY ASSOCIATION.

COLERIDGE, the philosophical religionist, in speaking of his theoretical ideas of religion, once remarked, that so long as these ideas remained in his understanding or his head merely, they had little influence on his conduct; but that now they had got into his heart and affections, they began to form the practical rule of his life. So is it with sanitary science, especially as regards the poorer classes. So long as it retains its merely theoretical or sciential form it may be said to get only into the heads of the people, if even thus far; but when put into a thoroughly practical and popular shape, and infused, as it were, into their hearts as well as their heads, then it is that sanitary science will triumph in the daily life of the nation. Now, great progress has already been made in sanitary science; but the laborious workers who are driving it into the heads of the people stand much in need of the help of a class of fellow-workers who, with slighter blows, perhaps, have yet a knack of engaging the affections, and of enticing sanitary ideas into the inner region of the people's hearts and habits. Just such fellow workers in sanitary science are the members of "The Ladies' Sanitary Association." This association, to use its own words, "aims at the diffusion of sanitary knowledge among all classes, by the publication of tracts, the delivery of lectures, the establishment of institutions for training nursery maids, and of loan libraries of popular sanitary books." Of the tracts alluded to, which form a sort of popularized compendium of sanitary science, and are being distributed among the people in hundreds of thousands, many are of a homely and entertaining description, while at the same time infusing sanitary ideas in simple and suitable language. Take, for example, one titled "Whose fault is it? How to make a happy home." A little story is here nicely told of a sensible servant girl, who has had the advantage of living in a family a little above her own rank, the heads of which were embued with wholesome sanitary ideas, and who hence enjoyed good health and cheerful spirits. The girl's sister, who has not had such advantages, is married to a workman, lives in a close court, in an uncleanly way, without the least idea of the importance and benefit of ventilation and fresh air, and with unwholesome smells abounding. Sickness hence and lowness of spirits prevail. The husband finds more comfort in drinking at public-houses than in spending his leisure with his family at home, and they sink into still greater misery in consequence. They are visited in this extremity by the unmarried sister, who of course sets all to rights; and on this simple thread a series of useful sanitary maxims is strung, while the interest and affections are engaged in the story. Another of the tracts, titled "The Mischief of Bad Air," is in the form of a simple dialogue. Some are in homely verse,—one of these called "The Sick Child's Cry, and other household Verses on Health and Happiness;" and another, "Household Troubles and Trials,—how to meet them." We may give a slight specimen of this style of tract from the first named:—

"CLEANSING.

Unclose the dark chamber,
Where fever and death
Have breathed out infection
With poisoning breath.

Let light and pure air in,
Through windows and door,
Cleanse the walls and the ceiling
As well as the floor.

Bring back to the dwelling
That choicest of wealth,
The purity, beauty,
And blessing of health."

This is the way to bring sanitary science home to the understanding and the affections—the heads and the hearts—of the humbler classes.

It is not to these classes alone, however, that the tracts address themselves, but to those above them, as well. Thus there is a useful one by Dr. R. Druitt, called "The Health of the Parish;" and another by Mr. H. Roberts, titled, "Healthy Dwellings and prevailing Sanitary Defects in the Homes of the Working Classes."

From "The Health of the Parish" we may here present an extract. The object of the tract is to show what the existing legal powers are; what the machinery is, and how it may be set agoing, and how cheap and efficacious the results usually are:—

Expediency of Making Complaints.

"No person need refrain from making reasonable complaints through fear of being made us or unneighbourly; for the local authority will satisfy itself of the reasonableness, before taking any steps in the case.

Neither need any one be deterred by fear of expense or personal trouble; for in the few cases in which legal proceedings before a magistrate are necessary, these proceedings are carried on by the local authority, at their own charge and by means of their own legal adviser and officers; cost, and by means of their own legal adviser and officers; who, moreover, being the chief witnesses, seldom require the testimony of other persons.

There is no reason, therefore, why any person should not appeal to the local authority when his own house is rendered unwholesome by nuisances created by his neighbours. For example,—A gentleman's house had been rendered offensive for years, because a neighbour had made use of a common, old, leaky rain-water pipe, inclosed in a groove of an old, thin wall, which formed part of the outside of the complainant's house, to carry away offensive water from a sink. Private remonstrances and lawyer's letters did no good: but at last the local authority was appealed to; the inspector certified as to the facts, the medical officer of health as to their injurious influence on health: the notice which was issued, and one or two private letters from the medical officer of health, were met by attempts to raise other issues; and so the local authority appealed to the magistrate, who, after hearing the case, ordered the pipe to be removed. Thus, as the magistrate observed, a case which under the old system would have been brought into one of the superior courts, where attorneys, counsel, and a host of witnesses would have occupied a day in swearing and counter-swearing, as their manner is, at an immense outlay of anxiety, trouble, and money, was settled quickly and satisfactorily to all parties, at the cost of 2s., paid by the defendant.

Still more should benevolent persons make use of these legal powers for the protection of the poor. Clergymen, who sit for half an hour, perhaps, reading or praying by the bedside, should for their own sakes be complainants; for they are much more likely to suffer than medical men, who, after they have once thoroughly investigated a case, seldom require more than a few minutes to ascertain how it goes on; and district visitors and others who desire to raise the moral character of the poor, should complain of anything which tends to keep them in a debased condition. Above all, the governors of hospitals, dispensaries, and other institutions for relieving sickness, should make complaint of any houses from which patients are sent to them with diarrhœa, fever, and other disorders possibly arising from putrid miasmata.

If Lord A., or if Mr. B., the rich tradesman, choose to occupy a dirty, unwholesome house, no one can or need hinder him; but if Lord A. send a servant to die in a hospital, of typhoid fever, caught in an unwholesome sleeping-place, or if the workmen in Mr. B.'s factory are made ill by close, stifling air, and foul drainage, and apply to the parish doctor or dispensary for relief, then it is quite just to interpose, and insist on the removal of the causes of ill health, which render these poor people chargeable to the rest of the community.

So, also, if a man choose to live in a poisonous house, let him. But he must not take in lodgers or inmates; and any person who has experienced any foul nuisance at a lodging or hotel, would do well to complain to the local authority on behalf of others who may come after.

Any person, then, who desires to benefit the poor, or to benefit himself by keeping down the poor-rate, will do a public service by informing the local authority of anything which may reasonably be believed capable of producing illness. Still more will he be doing so if he encourage the poor themselves to complain, and to put themselves into a condition to do so by thrift and temperance; for it is only people who pay their way that dare complain: they whose rent is behindhand are obliged to put up with dirt, damp, and nauseous smells; and if they grumble, their 'things' may be seized, and themselves turned into the streets.

Manner of Addressing Complaints.

Persons who wish to complain, if the thing complained of is unmistakeable and palpable, may address a letter by post, 'To the Inspector of Nuisances for the Parish [or District] of ——, Office of Board of Works, London [Postal initial].'

Or they may address it to the vestry clerk, or the clerk of the Board of Works; or may call and enter it in a book at the office. If the matter be one of a doubtful or suspicious nature, or one involving scientific inquiry, or one in which information may rightly be given, though the informant choose to conceal his name, a letter may be addressed,—'To the Medical Officer of Health for the Parish [or District] of ——, London [Postal initial].'"

In another of these tracts, titled "Remarks on Woman's Work in Sanitary Reform," it is well and truly said,—

"Woman's systematic co-operation is essential to the success of sanitary reform. Our legislators may frame wise Acts of Parliament, enforcing sanitary regulations, but some of the greatest causes of disease and death lie quite beyond legislative interference, and can only be removed by woman's agency. 'The Health of Towns Act' may insure good drainage and water supply, pure air, and other important external sanitary requisites; but till every woman frames a Health of *Home* Act, and becomes a domestic 'officer of health,' none can insure that the pure air shall ever be breathed, the good water ever be sufficiently used, or other sanitary conditions ever be fulfilled in-doors."

Others of the tracts, of a kindred stamp, are, "The Secrets of a Healthy Home," by Mrs. Fison; "Sanitary Defects;" "The Black Hole in our own Bed-rooms;" "The Inspector: How to get rid of bad Smells without, and bad Tempers within." There are many more, as on the health of mothers and infants, the every-day wonders of bodily life, how people hasten death, and so on. The managing committee seem still to contemplate the issue of more of these valuable tracts, but we hope they will excuse our suggestion whether there be not enough for the present, and whether the small means of the Association,—which, we would wish to let our readers understand, are much in need of increase,—would not be expended to better advantage in widening the distribution of those already in print throughout the provinces, as well as in town, by the aid, perhaps, of local committees.

The Ladies' Sanitary Association is affiliated with the National Association for the Promotion of Social Science, and is under highly influential guidance, headed by the Duchesses of Argyll and St. Alban's. The Hon. Mrs. William F. Cowper is the president. The office is 14A, Prince's-street, Cavendish-square, W.; and the secretary is Miss E. S. Griffiths, to whom, or to Mrs. Roth, one of the treasurers, our readers can send their contributions. The tracts, which they may purchase for distribution at from 8s. to 16s. per 100, are mostly sold in retail at 1d. and 2d. each. The Association has our heartiest good wishes.

EDINBURGH AND ITS NUISANCES.

"The Water of Leith! Would it were the Water of Lethe!" LORD PALMERSTON.

Two or three years ago some account of the sanitary condition of Edinburgh was given in our pages, and we dwelt more particularly on that which we conceived to be its most gigantic nuisance, viz., the Water of Leith.* Those remarks at the time excited attention and discussion, and we have been given to understand may have aided in leading to the Bill which has now been introduced into the House of Commons, under the name of the Edinburgh and Leith Sewerage Bill. The noble lord at the head of her Majesty's Government, while in Scotland last year, made the gentle pun we have quoted. We suspect, from the report we gave last week, that at this moment the joke expresses the state of feeling among the Edinburgh proprietors. We have not the smallest doubt, for example, but that most potent *à priori* reasoner, Mr. Henry Bowie, would rather see the Water of Leith run through—Hades, than through Edinburgh.

The ancient philosophers taught that no man should expect a reward during his life-time for speaking the truth. The process of disseminating knowledge is slow, and the obstructions are great. A generation or two must pass away before the most simple and elementary truth is recognised; and ages must elapse before we arrive at a full and true perception of the laws of the universe. One might imagine sometimes in these days, that our lot is better cast; that the progress of science is more irresistible; and that the relations of cause and effect are becoming closer and more evidently consequential. Alas! whenever we bring the breeches pocket into requisition, whenever we show a man that truth costs something which can be reckoned up in the current specie of the realm, we find a relapse all at once into the selfishness and stupidity of barbarism.

Here is a very good case in point. The Water of Leith, at this moment, is one of the common sewers of the city of Edinburgh. Once upon a time it was a picturesque mountain stream, growing out of the springs and rivulets of the Pentland Hills, meandering gently through the county of Midlothian, passing the northern outskirts of the romantic city, and finally reaching the estuary of the Forth through the Harbour of Leith. There is not a river in the country which turns the wheels of so many mills. Old inhabitants have caught trout in its limpid streams. Its richly-wooded banks have been the favourite haunts of poets and painters; and geologists have made its igneous rocks the basis of lofty speculations. But this picture of pastoral beauty no longer exists. The extension of the city, the increase of population, the growth of manufactures, the necessities, in short, of "modern civilization," have now reduced this pretty stream to the basest of uses. When we saw it last it was in a worse condition than the Thames; for it not only receives the sewage matter and refuse of probably 100,000 people, but it is also made the receptacle of all the horrible abominations which leak and ouse out of divers glue-works, paper-mills, chemical works, and gas-works; and, in particular, of the refuse from a gigantic distillery, which discharges enormous quantities of hot and acrid

* *Builder*, vol. xix. p. 421.

wash into its already polluted channel. The evils, of course, arising from all this are very conspicuous. In the first place, the indescribable combination of fumes and smells which proceeds from the water, in hot weather especially, is quite insufferable: secondly, the whole amenities of the river are destroyed: in the third place, the Harbour of Leith is converted, when the tide is out, into a huge, open, and seething cesspool; and, finally, the inhabitants along its banks suffer from an increased death-rate: in fact, the port of Leith, which suffers most, is never free from pestilence.

These things we pointed out as forcibly as we could at the time of our investigation. Our remarks, as we have said, excited some attention, and were on the whole received in the spirit in which they were made. But we added something more. The municipal councils of Edinburgh had for some years been perverted by certain members, whose darling ambition was to make the people of Scotland sober by Act of Parliament, and religious by restraining their liberty. To this end they turned Macaulay out of the representation of Edinburgh. To this end they got a Bill passed for shutting up the public-houses on Sunday. They did their best to excite the people of Edinburgh to revolt against the payment of their church-rates. They put a stop, among other improvements, to the restoration of the Mediæval cross which once adorned the High-street. But all this time the people continued as drunken and demoralized as before. It never seemed to occur to these fanatics that the question of public morals is inseparably connected with the question of public health; and that a Bill to purify the Water of Leith, for example, or the foul bourn, would have done more for the elevation of the people than a Bill to shut up all the public-houses in Scotland. Public opinion at length grew tired, and interposed; and, as it so happened, a few months after the publication of our article, in which we commented on their doings, these theologues were driven from power, and returned to the heap,

> ——"From whence they sprung,
> Unwept, unhonour'd, and unsung."

The town council of Edinburgh, as at present constituted, is, we believe, one of the most enlightened and liberal public bodies in the empire. Of course, it contains a sprinkling of the old leaven, but only a sprinkling. Mr. Charles Lawson, the lord provost, has already gained golden opinions from all sorts of people, for his mild and liberal administration; and he is ably supported by the provost of Leith, whose legislative qualities we are glad to recognise. One of the most important labours of the two councils, has been to concoct a measure for the purification of the Water of Leith. Without pledging ourselves to its details, we earnestly recommend the people of Edinburgh to examine it for themselves, and to see that the measure is not defeated through perversity and ignorance, supported by the interested opposition of the conterminous proprietors.

FRESCO PAINTING AND WATER-GLASS PAINTING FOR MURAL DECORATION.

IN the course of the discussion of Mr. Atkinson's paper, reported in our last number but one,—

Mr. R. N. Wornum remarked upon the statement of Mr. Atkinson with reference to the alleged durability of fresco painting, as illustrated by the Continental specimens to which he had referred. He believed that many of those pictures were not in reality pure frescos, for true fresco painting was of a comparatively modern date, and many of the old oil paintings were of a date anterior to the frescoes. The Egyptians never painted in fresco; their pictures were all in tempera. The Romans and Greeks likewise never painted in fresco, though they used it for colouring their walls. All those nations painted their pictures in tempera. The plaster was very solid and hard, and the pigments were worked up with various materials, such as eggs, gum, and glue. The Egyptians used hippopotamus glue, and the Romans varnished their pictures with wax, which was burnt into the wall, and produced great durability. In the tempera pictures which had failed, the fresco colouring of the walls, which was the foundation of the picture, had not given way, but the pictures had fallen off, because they were not so thoroughly attached to the wall as the original fresco colouring was. With regard to the Italian frescoes, he believed there were but few specimens of the pure fresco extant; they were for the most part secco and tempera, and he believed it was only at Pisa that genuine old frescoes could be met with, the earliest of which were the production of Pietro d'Orvietto, dating at the close of the fourteenth century. Mr. Atkinson had dwelt upon the greater durability of fresco as compared with oil painting. That was not proved as yet, and certainly was not corroborated by the specimens of the art that were to be met with in many parts of Germany, particularly in Munich, where he (Mr. Wornum) resided thirty years ago, just about the period of the revival of fresco-painting; and on revisiting lately some of the most magnificent works executed at that time, he found that large patches had become destroyed. If it answered better in Italy he could only attribute it to the dryness of the climate, that of Germany having proved, in his opinion, unsuitable for this process of painting. There were in our National Gallery oil paintings of earlier date than most existing frescoes, many of them being still in a perfect state. With regard to the climate of this country there was not only the severity of the weather, but, particularly in London and larger cities, there were the smoke and dirt to contend against. In this country the surface of a picture must either be smooth, so as to allow of wiping, or else it must be protected by glass. It would not do to have a rough surface, because of the amount of dirt and soot that got into the crevices. It was far easier to keep an oil painting clean in this country than a fresco, inasmuch as the latter held more dirt, from its being of an uneven surface.

Mr. Armitage said that he knew of no better means of cleaning fresco pictures than rubbing them with stale bread, which removed the dirt most effectually. His fresco pictures in the Roman Catholic Church at Islington had not suffered in any way. He should like to hear any opinions with respect to the kind of sand to be employed. The so-called silver-sand was used in the Palace of Westminster, and while he was at work upon one of the frescoes there, a German artist who was present objected to the use of this substance, and recommended that powdered granite should be used, as the only material that would render frescoes durable. If, however, the Munich frescoes had all failed, it did not argue much in favour of the superiority of granite sand. He had not gathered from Mr. Atkinson what he considered to be the chief cause of the decay of fresco pictures. The deterioration in the frescoes of the Houses of Parliament was very deplorable, but at the same time there were other frescoes in London where that decay had not taken place. No one, however, had yet explained why this had occurred in one place and not in another.

Mr. J. M. Blashfield said that during the early operations at the Houses of Parliament, some inquiries were instituted with respect to the lime to be used for the frescoes. He received specimens of some of the various kinds of lime, and he found one or two contained traces of peroxyde of iron; moveover, upon an examination of the existing frescoes at Westminster, he had come to the conclusion that the lime used in them must have contained a small quantity of iron. He knew also that silver-sand contained a considerable quantity of iron, as he had used it very largely, and in some cases the quantity was so large that if the sand was placed over a fire it turned a pink colour. There were other qualities of sand which, before washing, looked dull and brown, but when washed and dried were very pure, and from such glass of excellent quality could be made. It was that sort of sand which he thought should be used for frescoes. The calcination of lime was a matter to which he thought too little attention had generally been given, and the sources from which the lime was derived also produced variations of quality. Some chalks contained from one to two per cent. of peroxide of iron, whilst in others the proportion was very small. All chalks which contained iron formed lime more or less hydraulic; lime which was entirely free from iron had no hydraulic character, and would never set under water. It was, therefore, an important matter to those engaged in fresco painting, that they should thoroughly understand the qualities of the lime they employed so as to produce the most durable work. The lime obtained from marble was somewhat porous when set. On examining a piece of mosaic from Pompeii, he was struck with the similarity between the fine mortar in which the small pieces of mosaic were imbedded and the ground of the frescoes there discovered. Both were porous, but very white and hard. It appeared to him that something like pumice or lava, partaking of the properties of the pozzolana of Italy, had been mixed with the materials, which had given a certain amount of porosity while it aided in the hardening of the lime, and formed the groundwork of the fresco, making it more ready to imbibe the colours. He had calcined Italian marble, and slacked it with great care; but it did not make a hard mortar. In his opinion, in most cases lime was not slacked properly for architectural purposes. When it was properly slacked and well kept, after four or five years it became so hard that it required great labour to bring it again into powder; but when carefully treated and laid on well with a proper quantity of sand, it would gradually dry without cracks, while new lime was sure to crack and blister. It was also most important that the bricks forming the wall should be well burnt, otherwise the salts left in them would be sure to find their way to the surface, and ultimately destroy the plaster. An instance had come under his own knowledge in which 20,000 bricks were burnt with only four tons of coals; whilst, in another case, no less than sixteen tons were consumed in burning 4,000 bricks. If the bricks were properly burnt, and if fine sand properly washed were used in the mortar, he had no doubt fresco pictures would possess the same durability in this country as that claimed for them in Italy.

Professer Kerr would venture to submit one other theory with regard to sand, which he believed was supported by the experience of very remote antiquity, viz., that the sand used should be stone-dust. Vitruvius, in describing the materials used in fresco, stated that the sand used was made by pounding stone-rubbish. The effect of that might not be apparent at first sight, but on consideration it would be found to be an important point. The use of sand in plaster was this—it supplied the strength of the substance, the lime acting as the cementing medium, connecting the grains of sand together. But the lime which connected the grains of sand together, was of itself a weak material, and liable to decay. It was simply carbonate of lime, divested of its carbonic acid by burning. Pure lime contained no carbonic acid; but if they mixed mortar with stone-dust, as was customary with masons for some descriptions of work—stone-dust instead of sand—the result was, that the lime absorbed the carbonic acid in the stone-dust, when it became restored to its natural condition of carbonate of lime, and the process of hardening went on more rapidly. He thought these considerations were of importance, as bearing upon the preparation of the groundwork for frescoes, with a view to durability.

Mr. J. G. Crace said, although he was a great lover of fresco painting, yet, from all he had observed, he thought he must come to the conclusion that it would be a waste of valuable artistic time to continue to carry on the practice of that art in this country. In recent visits to Italy he had paid very particular attention to this subject, and had noticed that in many of the frescoes which were executed by early Italian masters some 400 years ago, the colours seemed to be perfectly fresh, and the ground well preserved; but directly he quitted Italy, and came into more uncongenial climates, he found that all works of this character that had been carried out for some great length of time, were more or less injured; and he thought it was only under the influence of the peculiarly genial climate of Italy that fresco-painting could be carried on with safety. Of the paintings on walls exposed to the effects of the weather, perhaps the most remarkable were those of the Palazzo Doria, at Genoa, executed nearly 400 years ago. The figures appeared perfectly fresh and beautiful, and in no way seemed to have lost the richness of the colouring, nor did the lime surface itself seem to be acted upon. In those at Florence, which had been preserved by having been placed in the interior of the buildings, the colours seemed to be quite pure, fresh, and bright. He knew of no more beautiful example than that of Fra Angelico, which was but imperfectly represented in one of the chromo-lithographs exhibited this evening. It was most beautiful in colour, and simple in design and execution. He did not, however, know, through the whole of the North of Germany, in Switzerland, or in Belgium, a single example of a well-preserved fresco existing. Of late years, he believed, that style of decoration had not been attempted. In Cologne Cathedral, the results of its use were most melancholy. He would now say a word as to the various influences that were likely to injuriously affect any frescoes that

might be executed in this country. First of all, he would ask them to consider the external effects of our climate upon stone buildings. Look at St. Paul's, or any other great building which had existed for any length of time in London, and see what were the effects of the climate upon them. If this were so on a plain undecorated surface, how entirely would any painting with a variety of colours be destroyed. Then, again, there are influences operating behind the picture as well as on the front. If the lime were not well mixed, it would throw out an efflorescence which would cover the picture with a sort of mildew, similar to the effects that were to be witnessed in the Houses of Parliament; and if the sand was not of the right description, the work was sure to be injuriously acted upon. The question then arose, why should we be bound to adopt fresco? He thought the step now taken by the artists employed upon the Houses of Parliament was the right one, viz., the covering their pictures with a substance which produced a sort of vitreous surface not likely to be acted on by our climate. The water-glass process no doubt possessed many valuable qualities, but the difficulty was to find a surface which the salt employed would combine with properly. He believed the only surface yet known which united intimately with water-glass, was simple whitening; a lump of whitening, which would crumble in the fingers, if dipped into a solution of silicate of potash, became as hard as stone. As regarded encaustic painting, he thought the alternations of heat and cold of our climate would have a very prejudicial effect upon pictures executed in that style; and there was the further objection that they could not cleanse wax paintings. Therefore, acknowledging, as he did, to the fullest extent, the beauty of the effects of mural painting, he felt that the great object to be attained was, to discover such a protective surface as would obviate the destructive influences which he thought at present precluded the employment of fresco in the arts of this country.

Mr. C. H. Smith said, the great objection to fresco, he thought, was its uncertainty—a small experiment might succeed whilst a large one might fail. Then there was the further objection—that real frescoes must always be copies from an original design. The artist could only prepare his materials for just as much work as he could accomplish in a day. Then, again, a pure fresco could not be retouched, and he would ask, was it possible for any artist to paint a large picture satisfactorily piece by piece? It would scarcely happen but that he would desire to retouch certain parts, and tone other parts differently: and besides, the effect of the colours when dry was very different from that produced when they were first laid on. He did not agree with Mr. Atkinson in the opinion that that valuable works of art should be attached to a building so as to be irremovable. We were fortunate in having in this country many pictures in oil of great value, which we could not have had if they had formed parts of mural decoration. He entirely concurred with the views expressed by Mr. Blashfield as to the effects produced by salts and alkalies in imperfectly burnt bricks, and also in many descriptions of building stone. When bricks of that description were used in the interior of buildings, the effects were apparent upon the plaster, and the salts left in the imperfectly burnt bricks would penetrate through walls of great thickness. He thought this was the cause of the destruction of fresco more than anything else. The water-glass process, he thought, had not as yet been sufficiently tried to warrant its general adoption.

Mr. Purdie, as one who had made a considerable number of experiments with the various systems of fresco as well as with water-glass, begged to offer one or two remarks. Works of art painted upon walls, were subjected to two deteriorating influences; first, there was the condensation of vapours upon their surface; and, secondly, there was the damp from the wall behind them; and the more impervious the surface of a picture was, the more liable it was to be affected by the damp from behind. With regard to the various methods of fresco painting, Mr. Atkinson had described them as *buono* and *secco*, though the name of the latter was contradictory to fresco; then there was a third process, which might be termed the Pompeian fresco. It had been contended by one speaker that the Pompeian paintings were not frescoes; but from experiments he had recently had to make, he (Mr. Purdie) believed a great many of them were frescoes. The surface on which the pictures were painted was polished, but the picture itself was not so. It was supposed by some that the painting had been executed in wax, whilst others supposed it to be tempera. He forwarded a piece of the composition to the Museum of Geology, in Jermyn-street, and the result of analysis was that no trace of wax or other binding substance was found in it; there was nothing whatever but the pigment and carbonate of lime. The conclusion arrived at was, that the picture was executed before the lime was dry. With respect to the issue raised by the paper, whether or not it was desirable to pursue the art of fresco painting further in this country, he would not, at that late hour, enter into that topic; but he would remark that, whatever merit was claimed for frescoes was possessed in an equal, and even greater degree, by the water-glass process. That system had now been substituted for fresco by all the artists engaged in the Houses of Parliament with, he believed, the single exception of Mr. Dyce. The difficulties under which fresco decoration was carried out had been very aptly described by the last speaker, especially with regard to the difficulties of painting a picture in small portions from day to day. It was, indeed, very rarely that any artist could execute a satisfactory work under such circumstances. With regard to the fresco works of the old masters, he believed they had all been afterwards touched up in tempera.

The Chairman (Lord Elcho) said that, before moving the vote of thanks to Mr. Atkinson, which he should do with the greatest pleasure, he wished to make a few observations. When he was asked to take the chair on this occasion, he thought the best thing he could do was to endeavour to elicit the views of artists conversant with the subject; for what was really wanted was practical and technical knowledge on the process of fresco painting; and he believed he had gone to the very best sources for obtaining the most valuable information. He went in the first place to Mr. Watts, who sent him to Mr. Leighton; and, subsequently to that, he saw Mr. Herbert and Mr. Maclise; and he had before him letters from most of those gentlemen which would greatly interest those who had given attention to this subject. What they wanted to ascertain was, what was the proper material to be employed in this process, and what was not. Mr. Atkinson had pointed to the chromo-lithographic prints exhibited. These had been brought out by the Arundel Society, which had a good object in view; but, if he had been in Mr. Atkinson's position,—arguing in favour of frescoes,—he would not have pointed to those prints, inasmuch as the object of the Arundel Society was to preserve to after ages some feeble record of those great masterpieces of early Italian art, the originals of which were mouldering and fading away. So far from appealing to these prints as evidence in favour of returning to a process which Mr. Atkinson stated had been abandoned by the artists employed by the Government, he (the chairman) would point to those chromo-lithographs as reasons for not rushing to the conclusion that we could not, in the year 1864, find some better and more durable means of mural decoration. The tendency of the discussion was decidedly that fresco painting was unsuited for decoration in this country; but while they admitted that *fresco puro* was imperfect in itself, let them not on that account give up mural decoration altogether,—he meant high art on their walls, till they were assured no good substitute had been discovered. He had before him a valuable little pamphlet by Mr. Gambier Parry, which showed that, while the most serious effects had been produced upon the frescoes at Mantua and other places where they existed in damp cloisters, yet in Egypt the colouring on the tombs of the Ptolemies was as fresh and bright as if only done yesterday. Whatever might be the merits of this process, however, it was clear, from the experiments made in the Houses of Parliament, that it was not suited to the climate of this country. But of this he was certain,—they must not on that account be discouraged from attempting mural decorations in the highest style of art; and there were artists in England now who acknowledged that a fitting substitute had been found in the water-glass process, which was well suited to our climate. He had had a most interesting conversation with Mr. Herbert on this subject. That gentleman told him he had nearly been driven mad by the trouble and annoyance which the old system of fresco caused him. He added that he never knew how his work would turn out, the colours being put on when the plaster was wet, in which state it remained for eight hours; and having finished a piece on one day, he had to wait till the next to see whether it was correct. But, in addition to this, there was another element of difficulty, that if the plasterer put a little more water into the plaster one day than the day before, although Mr. Herbert might use the same colouring, when it was dry the effect would be quite different. Thus, with respect to the small fresco of King Lear and Cordelia, which had stood the best (only one head having gone, owing to the uric acid from an adjoining room having trickled through and affected the colouring from the back), Mr. Herbert had cut out the head of Lear six times, and that of Cordelia five times, and there was no part of that picture which had not been cut out four times. From what he had said it was obvious that the plasterer must be as accurate in his work as the painter; and it sometimes happened that the painter and the plasterer were not on the best terms. It was a melancholy fact that Mr. Dyce's and Mr. Herbert's plasterers had each died mad; one raving mad and the other melancholy mad; and Mr. Herbert attributed this, in a great measure, to the effect of the constant worry these men were subjected to in their department of the process. He was gratified to find that Mr. Herbert expressed himself satisfied with the water-glass system. He had asked that gentleman to put upon paper his opinions generally on this subject, and he would now read the communication with which Mr. Herbert had favoured him:—

"I am quite convinced that, however true the theory of frescoes may be, the practice of it always has been, and will ever prove, next to an impossibility, if indeed any refinements or subtleties of art are attempted. I may be asked, have not the Italian painters left evidences to the contrary of this assertion? I reply, using the words of Vasari, that in his time there was but one 'true fresco in Italy,' and the melancholy condition of frescoes throughout the Continent shows further proof of Vasari's statement. Almost all the really great colourists of Italy abandoned it after a few trials, and the Michelangeloes held up to us as marvels of fresco have long since been in a hopeless state of decay. The smallest work in genuine fresco, carried to any point of excellence without employing the fugitive mode of completion, *i.e.* vinegar and white of egg (so freely used by Italian painters), would be an achievement only to be attained by successive obliterations and waste of life. Fresco may do admirably well where a slight bravura sort of art is required, but this should be the *passe-temps* for those whose aim is very moderate, and whose employers are easily satisfied. Fresco has had a fair trial here, and is to give way before something a thousand times better in every way."

Mr. Maclise had written to him as follows on the subject of the water-glass process:—

"I beg leave to send you a proof of a report I made to the Royal Commissioners of Fine Arts, the late Prince Consort having wished me to repair to Berlin to see the process and performance of the stereochromic method, as practised by Kaulbach and others. You may not have leisure to look over the report, and therefore I must only ask you to receive the very latest intelligence on the subject of my daily practice. This practice with me is one of the utmost simplicity,—I may say I have had a kind of pleasure in so simplifying it. On this fair tablet of 46 feet of pure plaster, spread at once, I paint in colours ground with pure water, my only vehicle being distilled water, and this simple proceeding (being, indeed, the process of fresco secco) becomes nearly indelible by the mere fact of the colours being absorbed. This true water-colour painting (and what is called water-colour is in fact gum colour) becomes permanently fixed by shedding over it a spray of water-glass through a syringe. The advantages of this method over that of fresco are obvious. The couch of plaster is spread at once over the whole surface, and not laid in piece by piece: each day's work to be painted on while fresh, to secure fixation. This old piece-meal process makes the work a kind of mosaic, and in a complicated design becomes a miracle of intricacy in its joinings, and, although a misery to the painter, is a perfect triumph to the plasterer. In the new process we can proceed, if we like, with as much freedom as we approach a canvas, no cautious and cowardly preparation of sketches, and the cartoon to be punctured or styled on the wall and slavishly copied, whereby the vigour of the cartoon is lost, with nothing to compensate for it. As regards my own practice just now, I may reply to your inquiry, which is in itself a flattery, that although I have made a careful design of the subject to be painted in this place, yet I need not have done so, and as it is, I paint direct on the wall constantly from models of all sorts, sailors, marines, guns, tackle, ropes, blocks, and my boarding is a kind of museum of marine stores, for which, indeed, I am originally indebted to your Lordship in having mediated for me, at my request, with the Secretary of the Admiralty, by whose favour I have secured attention at the War Office, and stirred up all kinds of sympathies at Woolwich and Greenwich. To get Nelson's coat from its glass-case in Greenwich Hall to my house in Chelsea, where I could do justice to the details of its buttons required, I do believe, the intervention of the whole Board of Admiralty with the Governor. Dr. Hofmann said that the water-glass spread over the picture ought to effloresce as a proof of its efficacy. I should prefer this not to take place; perhaps your Lordship may be able to learn something about it."

They had thus high testimonials in favour of the water-glass system, which it appeared had stood the test of a good many years. The examples of this process at Munich had stood while the frescoes had faded. The chairman then went on to state that he had received no written communication from Mr. Watts, than whom, however,

o man had more enlarged views of art, or more evotion to fresco-painting. In proof of that, e might mention that Mr. Watts, during the me General Anson was chairman of the London nd North-Western Railway Company, offered to ecorate in fresco the large hall at Euston Sta-ion, the company only bearing the expense of olours and the necessary scaffolding. That ffer was not taken advantage of; but the liberal pirit of Mr. Watts met with a more ready re-ponse in the case of the hall of Lincoln's nn; and, when the work was done, the enchers were so struck with the handsome onduct of Mr. Watts that they voted him sum of 500*l*. No man had done more for esco painting than Mr. Watts; and that gen-leman had sent him to Mr. Leighton for infor-nation with regard to the new process of mural ecoration discovered by Mr. Gambier Parry, ho, however, was not himself a painter, but ad employed Mr. Leighton to execute the deco-ations of a church at Lyndhurst, in Hampshire. Ir. Parry had published a communication in the *Ecclesiologist*, and the extract he would read rom it he believed would be interesting to the neeting:—

"To meet all the requirements of wall-painting (where he walls are dry) with little risk of injury from the action f our climate, avoiding the objections to other systems, nd retaining all that is good and effective in them, I re-ommend the following scheme. Take a medium com-osed in these proportions:—

Pure bleached wax	3 ounces	by weight.
Elemi resin	1 „	
Oil of spike lavender	6 „	liquid measure.
Finest preparation of artist's copal	18 „	

hich shall be used thoroughout from the first preparation f the wall to the last touch of colour laid upon it, that he whole mass may be perfectly homogeneous. All colours re to be ground up in it, and may be kept in tubes, as il colours are, or in any other way. The same composi-ion diluted in *twice its bulk* of rectified spirits of turpen-ine makes the liquid with which the pores of the wall are o be saturated by copious washes. The number of these vashes must depend on the absorbency of the wall sur-ace; and the more absorbent that be the better. The ast wash should be mixed up with:—

Best gilder's whiting well washed and baked dry	3 parts *in bulk*, not in weight.
Flake white ground (as usual) in water and perfectly dry	1 part, ditto.

o the consistency of thin cream; the surface should be well covered with it; indeed, in most cases, two coats of his are better than one. Common rough wall plaster will ake two doses of the transparent wash, and two with the paque white. Each wash should be allowed twenty-four ours to evaporate. The object of these washes is to key he prepared surface deeply into the pores of the wall with a material which dries in them as hard as stone, and leaves a surface white, solid, absorbent, and of a good texture for painting. When the cartoon is traced on the wall, let a part of a design be chosen enough for a day's work, and washed over thinly with oil of spike or highly rectified turpentine (the former is better, being a stronger solvent of the copal), the object being to open the surface which will then be painted into, and dry in one solid mass, by the evaporation of the volatile oils. The wash should be lightly applied before the palette and colours are prepared for the day's work; the time thus employed will allow the surface to dry just sufficiently to let the paint be applied without dragging up and mixing with it.

"The vehicles for painting in which the brush should be dipped must be either the same as the wall wash, only twice as much diluted, or oil of spike alone; or, when the cost of the spike oil is an objection, highly rectified turpentine. The surface dries gradually, not skinning over, as oil colours do, but equably throughout by evaporation."

On this subject Mr. Leighton had written to him as follows:—

"As I am, to the best of my belief, the only professional painter who has worked with Gambier Parry's spirit fresco, it may be convenient to you to refer to my un-finished works at Lyndhurst. I therefore send you two or three details which may interest your audience. The merits of the material are chiefly these:—Great similarity of result to buono fresco, which it approaches so nearly as to deceive any one not conversant with the practice of painting. Great scope of colour, as it embraces the whole oil palette, and is not subjected to any of the limitations which are peculiar to fresco. Great facility of manipula-tion, admitting of washes, impasto, and glazing within the space of a very few hours. Little or no change in the drying, not more than in water-colour drawing, on ab-sorbent sketching paper,—Harding's, for instance. Facility of re-touching, as the surface is always soluble in spirit, though proof against water. The only point in which it is inferior to real fresco, is in the absence of that pure crystalline quality of light so peculiar to the latter. On the other hand, it has, in a great degree, that other quality of fresco which is the alpha and omega of all grand monu-mental work—gravity—dignity."

The Chairman added that he had ventured to call the attention of the meeting to these letters because they showed there were other means of painting, which artists of great distinction be-lieved to be safe and satisfactory, and by means of which great works of art for decorative pur-poses might be executed without fear of decay. He thought the subject of such vast importance that he hoped this meeting would give attention to the excellent suggestion of Mr. Atkinson, that some committee should be appointed to inquire into the subject. The committee appointed by the Government had ceased their labours; but there still seemed to be so much doubt on this question, that it would be a pity that fresco painting should be abandoned without a full and fair inquiry. He would therefore enforce, as far as he was able, the suggestion that this society should appoint a good practical committee, in conjunction with the Institute of British Architects, the Royal Academy, and other bodies, who might go carefully into the subject.

THE SHAKSPEARE TERCENTENARY.

THE Crystal Palace Directors intend commemorating on the 23rd of April. For some months past Mr. E. T. Parris has been engaged at the Palace on an exact reproduction of the exterior of Shakspeare's house at Stratford-on-Avon, to be placed on a large stage in the centre transept of the Palace, and around and about which the entertainments on the 23rd of April will take place. This counterpart of Shakspeare's birth-place will be more than 60 feet wide. It is also intended to make within the house an exact full-sized reproduction of the room in which the poet was born, and of the room below, and to place there such interesting and authentic Shakspearian relics as have already been lent, or will hereafter be intrusted, to the Directors of the Palace.

The Stratford-on-Avon fund in aid of the local scholarships and monumental memorial is now accumulating. Parchment lists of names, addresses, and amounts will be bound up and deposited in the poet's birth-place, as a "census" of his admirers in the tercentenary of his birth. The subject of lodging visitors during the festival has received serious attention, and the following resolution has been adopted by the local committee:—"It having come to the knowledge of the committee that persons desirous of letting lodgings during the period of the Tercentenary Festival are expecting to demand prices of such a nature as to do infinite mischief in deterring strangers from visiting the town, the committee feel bound to express their strong disapprobation of such a course, and to adopt such measures for the registration and letting of lodgings as will conduce to their benefit on reasonable terms, and that further arrangements shall be made for running trains to neighbouring towns where accommodation may be obtained on reasonable terms." The Monumental Memorial committee now includes the Earl of Carlisle, K.G., and Messrs. Theodore Martin, Alfred Tennyson (poet laureate), Gambier Parry, John Ruskin, and Robert Bell.

The Birmingham commemoration is said to be receiving continual accession of support. The original Birmingham Book Club (now nearly two hundred years old), proposes to contribute some valuable Shakspearian volumes. Messrs. Day & Son, of London, the publishers of the photo-zincographic facsimile, the first collected edition of Shakspeare's plays, have promised a copy of their forthcoming excellent work. It is intended to provide a handsome volume, to be preserved in the library, in which the donors—the founders of the first Shakspeare library—shall be invited to sign their names. As the library—being associated with the free library—will be open to the public, the committee reasonably expect that small subscriptions will be forthcoming, as well as the higher sums hitherto received.

Manchester, without a definite programme, has raised 1,000*l*. towards a local commemoration.

At Liverpool the mayor will give a Shakspearian fancy dress ball, in the town-hall, on the 21st of April, and throw open the theatres on the evening of the day following. The general committee formed in Liverpool to manage the commemoration, have resolved that "A fund be established in Liverpool for the relief of authors, actors, and literary men."

At Bristol, there seems to be a desire to have a celebration of some kind. Following up this desire, Mr. Sholto Hare has addressed a letter to the public press, suggesting that a permanent memorial be erected in some public situation in Bristol, and that there be a public banquet and a fancy-dress ball, the adoption of Shakspearian characters to be observed at the latter. Mr. Hare also states that he has received a communication from Mr. A. C. Ponton, of the Bristol Society of Architects, recommending the erection of a theatre at the top of Park-street, or providing a marble bust for the Academy of Fine Arts, rather than send money to distant places. One of the local papers suggests that the "permanent memorial" mentioned by Mr. Hare take the form of a Shakspearian scholarship to be established for the pupils of the Clifton College and Bristol Grammar-school, and that the 23rd of April might be celebrated publicly by a Shakspearian performance at the Theatre, a concert of Shakspearian music at the Victoria Rooms, and a fancy ball.

The printers of Newcastle are bestirring themselves, in order to do honour to the memory of one to whom their craft is so much indebted. A committee has been formed, who intend to communicate with the trade in general, including bookbinders, engravers, lithographic printers, &c., as to their willingness to join in the demonstration.

Mr. W. Perry's Bust of Shakspeare, carved out of a portion of Herne's Oak, will be remembered by some of our readers. Her Majesty the Queen ordered a duplicate of it, and we are glad to hear that the Prince of Wales has just now directed the carver to produce one for him.

Shakspeare Memorials.—A correspondent suggests that Shakspeare's descendants should not be forgotten on the present occasion, but that endeavours should be made to place them in a good position.

THE NEW ZEALAND EXHIBITION, 1865.

THE commissioners have fixed upon the first Tuesday in January, 1865, for opening the Exhibition. The Exhibition building, with such annexes as may be necessary, will be erected in the city of Dunedin, province of Otago. It will be of brick and cement.

Subject to the necessary limitation of space, all persons, whether designers, inventors, manufacturers, producers, or possessors of articles of New Zealand origin, or of such others the produce of other countries as may in the estimation of the commissioners be eminently calculated to aid in the development of the colony, will be allowed to exhibit; but they must state in what character they exhibit.

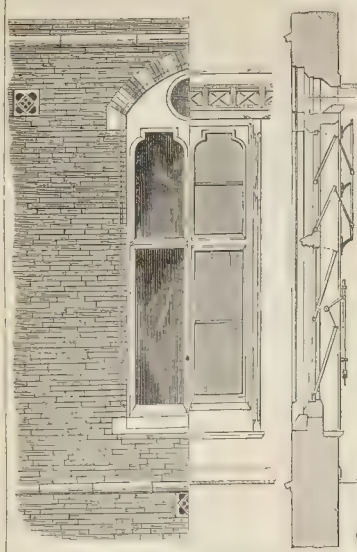
The commissioners will communicate with New Zealand exhibitors only through the local committees of their respective provinces, and with those of neighbouring colonies, of Great Britain and Ireland, and of foreign countries, either through the agent in London or directly through the secretary in Dunedin.

Every article produced or obtained by human industry, whether of raw materials, machinery, manufactures, or Fine Arts, will be admitted to the Exhibition.

Juries will be appointed, and certificates awarded in all the classes but that of Fine Arts.

LEEDS NEW INFIRMARY.

WE now add to the illustrations we have already given of the large Infirmary about to be built in Leeds,* the East Elevation of the building; a longitudinal Section, looking west; the plan of part of the ground-floor, and details showing the system of ventilation, to some extent explained in the particulars we have already published.



The following shows the appropriation of the various rooms:—

REFERENCES TO PART OF GROUND PLAN.

A. Entrance-hall.
B. Porter's room.

NEW INFIRMARY, LEEDS.

NEW INFIRMARY, LEEDS.—MR. G. GILBERT SCOTT, R.A., ARCHITECT.

"CHANCELS."

SIR,—The Rev. William Purton presents himself in your columns as one well versed in architectural lore: he will therefore have no right to shelter himself under the plea of ignorance, from the charge I am compelled to bring against him, of deliberately misrepresenting the author he quotes, and the examples he selects from Mr. Fergusson's work, as evidences against my statements.

He trumpets forth his authority, as "an architect a hundred times better known" than I am, and then proceeds to claim him as wholly on his side in the controversy; whereas, nearly all that Mr. Fergusson has written, and every plate he has given, at all bearing on the question, in his "Handbook of Architecture," confirm my views and present a chain of evidence that establishes beyond the shadow of a doubt the fact, that in all really ancient churches the chancel was simply a shallow recessed platform for the reception alone of the presbyters and their president.

When Mr. Fergusson's book appeared, I scanned its pages carefully, to see whether, among the numerous examples he had collected, any one exception could be found to what I had many years before proved to be the normal form and use of a Christian church; and I can now demonstrate that there is no single adverse instance in that work, and I believe that no one ever did exist throughout the whole domain of Christianity.

Although, in one or two instances, Mr. Fergusson has erred in mixing up in one description arrangements due to different periods of time, he gives the key to the causes of the changes, and his plates contain the solution of the difficulty.

I should like to transfer to your pages the whole chapter on "Basilicas," but the substance of the remarks is,—

"That the form of church government was long unsettled; the most respected individuals of each isolated congregation being selected to form a council to advise and direct their fellow-Christians; and the elected president of those thus chosen, gradually obtaining power at the cost of his fellows, and the whole order at the expense of their original equals,—the people; whose 'delegation,' however, was still admitted to be the title to office."

The ancient basilicas offering the most suitable model for the original constitution of the church, they were copied exactly in form and use.

"These arrangements were not long allowed to continue as we have described them; for the now dominant hierarchy of Rome soon began to repudiate the republicanism of the early days of the church, and to adopt from the East the convenient doctrine of the absolute separation of the congregation into clergy and laity. To accommodate the basilicas to this new state of things, first the apse was railed off and appropriated wholly to the use of the clergy; then the whole of the dais or raised part in front of the apse on which the altar stood was separated by pillars, called *cancelli*, and in like manner given up wholly to the clergy, and not allowed to be profaned by the unordained multitude."

Mr. Fergusson thus concurs with all ancient church history in assigning the cause of the changes he describes to the conceit and ambition of ministers seeking to be priests *to* their fellows, instead of priests *with* them.

Mr. Fergusson's plates demonstrate that the changes made in the old basilican churches were subsequent to the ninth century. The "style" of the additions proves this; and the present evidence of a stone tomb, called an "altar," with its pillars and canopy in front of the ancient seat of the president, affords a proof, I repeat, that no one but Mr. Purton can think of gainsaying. He says:—

"The bishop's throne was usually quite elevated enough (I know an instance where it was raised *ten* steps above the floor of the bema), and the altar and *cancelli* quite low enough to admit of his being both seen and heard, though sitting behind the altar."

Ten steps, Mr. Purton! Why, twenty would not have brought the "bishop," so seated, to the level of the top of the cupola over the "altar;" and to get a peep at his people in the nave he must have called in the aid of Mr. Home's spirits to lift him right up to the coved ceiling of the apse.

With inimitable coolness Mr. Purton adds:—

"In most of the churches mentioned in my last, the altar *does* stand, and therefore could have stood, and probably *did* stand at the first, in the centre of the bema, in front of the bishop's throne."

Mr. Purton knows, quite as well as I do, that wherever the "altar" now stands as he describes, the seats behind are never used, except in the instance of the installation of the Pope, and cannot be used as they were built to be employed.

Mr. Welby Pugin, describing the existing state of old St. Peter's, says,—

"The back of the altar is turned towards the nave, with a cross and candlestick upon it, and must have effectually concealed the celebrant from the people: behind all this is seen the great apse, with the *cathedra* for the Pope, mosaic ceiling, and other decorations."

As the "celebrant" even was thus hidden by the "altar," and the screen in front of it, the work of the fifteenth century, how could the occupier of the seat in the apse behind, either see or be seen?

Mr. Pugin, as a devoted Papist, knew right well that the doctrines of his Church required a screened sanctuary, such as the Mediæval "transubstantiators" afforded; and, anxious to prove this plan to be old, he quotes Mr. Purton's favourite example, San Clemente, and adduces its modern arrangements, as proofs of the intention to make the chancel a screened holy of holies.

"The marble enclosure of the choir is 4 feet 6 inches high: the floor of this choir is two steps above the nave. Between this choir and the sanctuary is a wall of marble, 6 feet high, with an opening in the centre, through which only the back of the altar can be discerned, as the basilica is turned to the *west*. It will be readily perceived by these arrangements, that although no ornamental screen-work existed; yet, practically, the sanctuary is far more shut out than in Pointed parochial churches, where the solid panelling rarely exceeds 3 feet 6 inches high."

When I pointed out, through your columns, the fact that the things which converted the old basilican churches into "screened sanctuaries," were of modern origin, Mr. Pugin was at once silenced: he dared not contest the point: that honour has been left to Mr. Purton, who seeks to gain his point by a perversion of facts, and sings an "Io pæan" of victory to cover his defeat and retreat.

Mr. Pugin, in common with other Papal writers, deplores the work of the Reformation, but admits its effectiveness; and says,—

"By these new arrangements the chancel was rendered useless, for the table was ordered *not to stand altarways*, but to be brought *down into the body of the church*. Thus the whole mystical arrangement of the ancient buildings (only existing from the tenth to the fourteenth century), "were violated and destroyed: and screen, altar-steps, reredos, sedilia, sacrarium, and sanctuary, were deprived at once of their original intention, and rendered useless."

Again, quoting the fifth reason assigned by the English Church;—

"Furthermore, an altar hath relation to sacrifice, so that of necessity, if we allow an altar, we need grant a sacrifice, &c., seeing the one was ordained for the other,"

Mr. Pugin remarks,—

"No language can be clearer on this point; and it is evident that even the use of the word altar is scarcely allowable according to true Anglical principles."

"A deep chancel, under the present system, is an absurdity: the very principles on which the Book of Common Prayer was framed are against it." "It may be urged that the chancels were ordered to remain as in times past: true, but in this same order will be found a clause which deprived them at once of the very spirit of their existence."

"Again, the usual plan of converting the conventual churches into parochial ones was to wall up the end of the nave, leave a few feet for the table, and either demolish the transepts and choir for materials, or leave them to decay."

The Church of England was reformed with the object of bringing her back to the scriptural ideal of a church; and the charge is quite true, therefore, that "she was not made to fit the old churches in her possession;" and if Christianity is to be lopped or stretched to fit them, the result must be unmitigated popery. Nothing, indeed, can be clearer, in spite of Mr. Purton's asseverations to the contrary, that the assumption of priestly power, and the invention of a material sacrifice to justify the pretension, was the sole cause of the vast change from the temple chancel-platforms that were universal for the first nine centuries, and the screened sanctuaries which came into use during the Middle Ages, in those countries *alone* where no ancient precedent existed to fetter the imagination of the priestly architects.

Mr. Purton says,—

"The decree of council in 567 simply permitted the laity to enter the chancel to communicate."

The previous decree of the Council of Laodicea, can. 19, says;—

"And it is fit that only the clergy should enter in unto the altar, and there to communicate."

The altar must, therefore, have been in some place other than that ordinarily occupied by the clergy; and Eusebius says most distinctly that this place was in the middle of the church. The Council of 567 reversed the latter decree, and admitted the laity to the *table* itself.

It will also tend to clear Mr. Purton's mind if he remembers in future that "apse" simply means a circular recess; and that apse and chancel are, in the old basilican churches, convertible terms simply because the "bema," or platform, stood generally in a recess of the apse kind, for the convenience of arranging the seats around it. When Mr. Fergusson, then, speaks of an old church as having a well "developed apse" coeval with the structure to which it is attached, he means the usual simple chancel which nearly all the basilicas, whether for civil use or ecclesiastical purposes, contained.

In a former letter Mr. Purton disputed my statement that the orientation of churches was of Mediæval origin. It was certainly not very honest in him to keep back the fact that the "architect who is a hundred times better known" than poor I, in the book with which Mr. Purton is so familiar, thus writes on that point:—

"The orientation of churches, by turning their altars towards the east, is wholly a peculiarity of the northern or Gothic races: the Italians never knew or practised it."

Mr. Purton says that the position of the bishops' seats was known to every architect and antiquary long before I was born, and that, therefore, I have no right to claim this as a discovery. He thus puts words into my mouth that never came out of it. All that I claimed was the having pointed out that the existence of these seats proved that the altars, with their pillared ciboriums now in front, could not possibly have been there when the seats were used; and that the style in which the additions have been made, as well as the constructive evidences, prove them to be all modern and clumsy attempts to imitate, in the Basilican churches, the arrangements developed in the Mediæval structures; the latter being the natural effects of the doctrines held at the time by their builders, the former simply the shop-fittings of the new tenants in another line of business.

I can only expect space in your columns to give a bare outline of the mass of evidence which establishes my views beyond the possibility of fair dispute; but I trust, shortly, to be able to publish a work on the subject, and then to petition the Legislature to enforce the decree of the Church of England, that the "chancels shall be as in times past."

JOHN ELLIOTT.

SOCIETY FOR THE ENCOURAGEMENT OF THE FINE ARTS.

AT the weekly meeting of this Society, at their Rooms, in Conduit-street, on Thursday, the 18th inst., Mr. Henry Ottley, the hon. secretary, delivered an address on the contemplated surrender of the premises of the National Gallery, in Trafalgar-square, to the Royal Academy, and removal of the former to Burlington House, or elsewhere, as the case might be. The speaker introduced his subject with some preliminary observations on the important results which had been obtained from the public exhibition of the national collection of pictorial art, not only in elevating the taste of the people, but in promoting the culture of native art. The beneficial influence of a feeling for beauty, as conveyed through the agency of art upon the human mind and character, was now no longer the theme of the poet and the visionary enthusiast; it had been emphatically recognised by an eminently practical man, Mr. Gladstone, the Chancellor of the Exchequer, in his eloquent address, delivered on the occasion of laying the foundation stone of the Wedgwood Institution, at Burslem, the other day, when he declared that this influence of beauty was "a liberalizing and civilizing power, and an instrument in its own sphere of moral and social improvement." Was it too much to insist, as a consequence, that it became the duty of the Government, having the moral and social improvement of the people in their charge, to see that the means of cultivating this liberalizing and civilizing power should be made generally available in the most ample manner, and on the most convenient site possible? He next proceeded to trace the history of the National Gallery, and the various decisions which had been come to, and pledges given by successive Governments, by the House of Commons, and by commissions, tending to confirm the right of the nation to retain possession of the premises on the eligible site now in part occupied by the National Gallery, and the desirableness of its assuming the occupation of the other portion, which had been temporarily conceded to the use of the Royal Academy. Lord Monteagle, Earl Russell, and the Earl of Derby had successively acknowledged this right, and the expediency of insisting upon it in the interests of public convenience. The Royal Commissioners of 1857 had reported in favour of retaining the National Gallery on its

resent site, chiefly on the ground of "its acces-ibility to the public;" and the President of the oyal Academy had recognised its advantages in iat respect, when he made it the ground of laiming it for the latter establishment, which as supported by the shillings of the public, hich he alleged could not be obtained in the ame numbers in any other less "accessible" ite. As a further illustration of the fact, he ight mention that on Whit-Monday in last ear, upwards of 10,000 persons visited the ational Gallery in Trafalgar-square, whereas n the three public days in the same Whitsun eek the South Kensington Museum, with all s varied attractions, artistic, industrial, and cientific, and open as it was, day and night, as visited by only 12,000 persons, being an verage of 4,000 a day. The long negotiations hich, during many years, had been had with he Academy, with the view of inducing them o surrender, with some show of grace, premises o which they had no "legal," if even a "moral," itle, was very nearly brought to a satisfactory ssue by Mr. Disraeli in 1859, and under condi-ions very liberal and satisfactory to that body; ut some stipulation put forward on the part of he latter as to the terms on which they would onsent to take a proposed grant of land on the Burlington House estate, interposed to delay he completion of the arrangement, until a hange of ministry occurred, which threw he whole matter into abeyance. He next howed how, from absolute want of room n its legitimate home, large portions of the ational collection, being those of the British chool, had been moved about from Marlborough louse to Brompton, and some of them (the Turner collection) to Trafalgar-square, at a reat expense. The protracted delay on the art of the Government in making proper pro-isions for the national collections, was not only dereliction of public duty, it implied a disre-pect for public opinion in a matter in which heir personal feelings were deeply concerned, which no minister in any other country in Europe would have dared to commit. And now, in spite of the repeated promises of successive Govern-nents, in spite of the oft and strongly declared pinions of Parliament, in spite of the decision of the Commission of 1857, the national collec-ion was again threatened with ejectment. Mr. Cowper, the Chief Commissioner of Public Works, ate in the last session of Parliament, announced hat Government had under its consideration a plan for the removal of the National Gallery to Burlington House. There was one circumstance, ne must observe, which made this case more uspicious, and the danger more hazardous than on any former occasion; namely, that the National Gallery, and the people's interest in it, were de-erted by some who had during many years been heir persistent champions. Lord Elcho and Mr. Danby Seymour, who as recently as 1858 had openly proposed, in the House of Commons, o give the Royal Academy "notice to quit," were now as warm in the support of the Royal Academy, with the provision of adding "a lay element" to it, which those gentlemen would probably help to supply,—and, with this new notion in their heads, were now for giving the National Gallery "notice to quit," a suggestion which her Majesty's Government, rescinding all that previous Governments had done and said, seemed disposed to carry out. He concluded, therefore, by calling upon his hearers, and upon the public at large, to be on the alert in this matter, and to be prepared to make such vigorous representations in regard to it to the Govern-ment and to the Parliament, as should prevent this scheme from being realized, and effectually, once and for all, establish the National Gallery in full possession of the premises purchased for it by the public moneys, with such extensions and modifications as might be found necessary for the worthy exhibition of the people's treasures of art.

A discussion followed, in which Mr. F. Y. Hurl-stone, Mr. J. Stewart, Mr. W. C. Dutton, and others took part.

THE LATE WILLIAM HENRY HUNT, ARTIST. — Some five or six years since, there was a party of artists at the house of Richard Ansdell, and the conversation turned for a time on some admirable drawings by Hunt. He was familiarly and affectionately spoken of as "Old Billy Hunt." Mulready was present, and remarked, "You call him 'Old Billy Hunt:' why I gave him his first lesson in drawing." This fact may be useful to a biographer.—Z.

THE STRATFORD GRAMMAR SCHOOL.

At the moment of going to press, we received a communication signed "T. B. Medwin, head master of the Grammar School, Stratford-on-Avon," combating the observation made in our pages as to occasional difficulty of access to the school. Mr. Medwin maintains that the number of interruptions has forced him to adopt the course he has pursued. The conclusion of his letter will be found satisfactory:—"I am very unwilling to admit a relaxation of the rule, unless I am assured, by the presentation of a card or a note, that the person applying for admission would, in case of refusal be put to inconvenience, or compelled to leave the town without seeing the architecturally, as well as archæologically, interesting interior of the edifice in which the world's poet '*sudavit et alsit*,' while employed in acquiring his 'small Latin and his less Greek.'

The suggestion which accompanies the statement to which I have adverted will not be lost upon us, and I vouch for it, that every facility for inspecting the Rooms of our Grammar School will be afforded during the whole time of the Tercentenary celebration."

THE ARCHITECTURAL ASSOCIATION.

THE ordinary meeting of members was held on Friday, the 19th inst., at the House, in Conduit-street.

The chair was occupied by the President, Mr. T. Roger Smith.

Mr. J. Gerand, of 2, Osborne-place, Markland Park, and Mr. W. Patterson, 123, Camden-street, Camden Town, were, on ballot, elected members of the Association.

Mr. J. D. Mathews (hon. secretary) read a letter from the Vice-President, Mr. R. Phené Spiers, tendering the resignation of his office in consequence of his prolonged absence abroad.

The Chairman stated that the committee had received the intimation of Mr. Spiers's resignation with regret, and that they were prepared to recommend the election of Mr. Henry Christian as vice-president in his stead.

The following appointments were then made by ballot:—Mr. Mathews, treasurer; Mr. L. W. Ridge and Mr. John Webber, members of the committee.

The Chairman announced the names of the gentlemen who had passed successfully the late architectural examination, and observed that it was a subject of much satisfaction to the Association, that all the London candidates who passed were members of their body.

The Secretary announced that, in consequence of indisposition, the gentleman who was to have read a paper that evening "On Figure Drawing," was unable to do so. Mr. Ridge had, however, on very short notice, offered to read some notes "On Westminster Abbey," which would be accompanied by the series of drawings of the Abbey executed by Mr. Tarver for the Blomfield prize.

Mr. Ridge then proceeded to read some notes which he had made of the visit of the members of the Association to the Abbey, on the 28th of June, 1862, on which occasion they were accompanied by Mr. Gilbert Scott. He also read extracts from Mr. Scott's work, and explained, with the aid of diagrams, the principal features of the building. He expressed himself doubtful as to whether the architect ever intended that there should be a central tower, and observed that an isolated tower for bells formerly stood close to the main building. The cathedral itself was a short church for the period, and this he presumed was to be accounted for by the fact that the present structure stood upon the site of the original edifice, and that it could not have been enlarged on the western side without seriously interfering with the chapter buildings. He regretted to say that the chapter-house continued in a disgraceful state, although it was but fair to the Dean and Chapter to state that it was not strictly speaking, in their charge, being retained by Government as a place for the receptacle of records. The walls, upon which there were still paintings, were covered with old wooden presses, and the whole apartment was in a state of decay and desolation. The pavement (now concealed by a flooring of boards) contained some beautiful specimens of tiles, which had been copied and reproduced. With regard to the choir, he quite agreed that it was badly arranged, and yet he could not tell what better plan could have been adopted. It was formerly under the tower.

Mr. Blashill expressed his surprise that students of architecture did not oftener repair to the Abbey to study and sketch. He also called attention to the beautiful ironwork on the tomb of William De Vallance.

Mr. Mathews said that he believed members of the Association would be admitted to the Abbey to sketch, on producing an order signed by the president; but in any case he believed that the Dean would, on proper application being made, grant the necessary permission.

The Chairman agreed with Mr. Blashill in thinking that great benefit might be obtained from a careful study of the Abbey, and of the descriptions given of it by Mr. Scott and Mr. Burges. There would not, he believed, be any difficulty in obtaining permission from the Dean to sketch in peace without the nuisance of a verger constantly enjoining the necessity of "moving on," to make room for a new succession of visitors. In the summer months the Abbey was a delightful place to sketch in, and an hour or two a week might be very profitably employed in transferring its details to the note-book of the student. With regard to some photographs, of which Mr. McLeod had spoken, he said he was sure that the Association would be very glad to inspect them on their next night of meeting (March 4), when Mr. Gilbert Scott had promised to read a paper, entitled "Thoughts and Suggestions on the Artistic Education of Architects."

A vote of thanks having been passed to Mr. Ridge,

The Chairman announced that the next subject for the class of design would be, "The entrance doorway to a cathedral."*

THE IRISH NATIONAL GALLERY.

ROYAL INSTITUTE OF THE ARCHITECTS OF IRELAND.

AT the last meeting of the Institute of the Architects of Ireland, Mr. J. J. M'Carthy, R.H.A. in the Chair, a paper by Mr. W. G. Murray, R.H.A., on the New Irish National Gallery was read, containing some very severe strictures on the design.

Mr. Murray briefly sketched the history of the building as known to the public, and mentioned that designs for it had been made by Mr. Lanyon, the President of the Institute, but that subsequently the task of carrying out the undertaking was intrusted, in or about 1857, to Captain Fowke, R.E. He expressed considerable dissatisfaction with the position and accessories of the Dargan statue erected in front of the gallery:—"William Dargan standing on a monolith, rough hewn, as it were, from one of his own rock cuttings, would have satisfied the mind or the eye—would have been according to good taste and judgment. As executed, he stands on a block that is big but not massive, without proportion in itself or to the statue, and which looks as if it had been got second-hand." Mr. Murray next commented on the meanness of the entrance and vestibule of the building, and the evident attempts to produce a striking effect in the sculpture hall, the general effect of which, however, was unsatisfactory. He next alluded to the grand staircase as ugly and awkward. The picture galleries were nicely painted, but in other respects show the same want of experience in designing, the same striking out into new paths, which are bad paths, as the room below. The building, although opened, is not finished, and the cost has been about 29,000*l*. The writer proceeded: "Mr. Lanyon's design, I am informed, while preserving the general character of the Museum on the south side of the lawn, took advantage of the irregular shape of the site to lengthen the building by about 70 feet, so that at both ends it should range with the Museum; and introduced, as a central feature, a very handsome hall, with a grand staircase projecting into the ground at the rear, and with this increased size, and elaborate finishings of carved stone and artistic stucco work in the interior, it was contracted for, to be finished for 29,000*l*. or thereabouts, which was afterwards reduced, by several alterations and omissions, to about 17,000*l*. I have no documents to prove these facts, but I am assured of their general accuracy; and being thus assured, I ask again, How can the vast increase be accounted for? I do not say, or wish it to be supposed for one moment, that any of the parties concerned have actually pocketed any of the

* We are asked to state, with reference to our last notice, that the proposition that a petition should be presented to Parliament, touching railway communication in London, was proposed by the *Chairman*, at the request of the Committee, and as their organ.

funds; but I do say that a committee of gentlemen, presided over by the Lord Chancellor, have 'meddled and muddled' the affair so successfully as to procure for the citizens of Dublin a bad building—a National Gallery of the Fine Arts from which architecture is excluded,—and barely half finished, at a monstrous cost, and that now they ask our thanks, as men who have deserved well of their country. Here we have no public opinion on art, and specially on the architectural branch of it; and we are saddled with an unfinished monster that can never be removed, and will perpetually stand in the way of any future improvement, both by its being there existing in its ugliness, and also by its having exhausted the fountains of generosity by which it might be replaced."

A lengthened discussion took place on the subject of Mr. Murray's paper, which was referred to the council for publication.*

FISH CULTURE.

At the invitation of the Acclimatisation Society of Great Britain, whereof Mr. Frank Buckland and Mr. James Lowe are the secretaries, a number of gentlemen interested in pisciculture operations assembled on Saturday last at the Firs, Twickenham-common, the residence of Mr. Francis Francis, to inspect the arrangements lately made in his grounds for storing and hatching the ova of certain fish. The society has commenced its work on a very economical scale, the cost of the sheds, tanks, troughs, &c., having been kept within 120*l*. The apparatus is comparatively simple, consisting of a large cistern, which forms the water-shed of several tiny rivulets, flowing gently through a number of stoneware troughs, in which the eggs are placed during the process of maturation and hatching. These troughs are arranged on stages one above the other in such a way that the water runs out at the bottom of each into the top of the one below it. Each trough is about 3 feet long by 8 or 9 inches wide, having a depth of perhaps 5 inches, and is provided at the surface of the water with a gridiron formed of thin glass rods, placed so closely together that the eggs, which are the size of a small pea, cannot fall through. As soon as the eggs are hatched, the fish pass through the glass bars into the lower part of the trough, from which they are transferred to another series of troughs, containing small stones and pieces of slate, beneath which the young strangers hide themselves until the egg sac with which they are provided for the nourishment of their early days falls off, and they find themselves obliged to cater on their own account. They are then removed to the rivers which are to form their future home. The operation of placing the eggs in the trough was begun on Christmas-eve last, since which more than 130,000 have been tenderly cared for by Mr. Francis and his coadjutors, Messrs. Lowe and Buckland: over 40,000 eggs and fry have been already distributed, and fresh supplies are being daily received.

This is a subject of very great importance, and we look to see fish culture practised in this country on a large scale. Our readers will remember the illustrations we lately gave of the arrangements at Hunmanby.

Mr. Pender, of the Elms, Hampton, has undertaken the fish-hatching for the Thames Angling Preservation Society. Mr. Pender writes,—

"This is now the third year I have hatched a large number of fish in my apparatus, which I have erected at my own cost, and have already turned many thousand fish into the Thames, the result being that many young trout, salmon, and salmon-trout have been seen and even taken with the fly in the shallows of the river. The number of fish I have now hatching out in my greenhouse are:—Salmon, 15,500; salmon-trout, 900; great lake trout, 2,500; Mr. Buckland's hybrids between the salmon and the trout (doing remarkably well at present), 3,000; ombre chevalier, 4,000; English trout, 97,000; French trout, 4,800; the total number of fish we intend turning out into the Thames this year being, therefore, 127,700."

The young fish are now hatching out fast from their eggs; and in a few days it will be a sight to see swimming about in their nursery more than over 100,000 young salmon and trout.

* The following gentlemen were declared by the scrutineers duly elected:—As Vice-president (in consequence of the death of Mr. Byrne, R.H.A.), Mr. G. Wilkinson, (Fellow); as member of council, Mr. W. F. Caldbeck, (Fellow); as student, Mr. Patk. J. Byrne; as associates, Messrs. Peter J. Moran, Thomas Early, Fredk. S. Barff, and William Woods.

METROPOLITAN BOARD OF WORKS.

SUBWAYS.

At the usual meeting of the Metropolitan Board of Works, last week, a deputation from the different metropolitan gas companies attended, to present a memorial on the subject of laying gas mains in subways, &c.

The memorial stated that subways were not suitable for gas mains; for if gas were mixed with common air it became explosive, and in confined and limited places was exceedingly dangerous. It was impossible to prevent the escape of gas (?), by reason of the rapid decay of pipes; and as all works in subways would have to be performed by artificial light, escapes of gas would be subject to almost immediate explosion. The memorial went on to say that frequent connexions with mains had to be made, but in a dark and confined space that would be at all times difficult and dangerous, and in cases in which large mains are to be connected, quite impracticable; as such work could not be performed by artificial light, and without more fresh air than could be obtained in any confined space. While admitting the usefulness of subways, they hoped the Board would protect the public and the gas companies from danger to life and property by exempting gas mains from the Subways Bill.

The Chairman said, the Board had not rushed into this subject without the fullest inquiry, for they offered premiums for the best designs for a subway, and those designs were referred to a committee, among whom were the late Mr. Robert Stephenson, Mr. Hawksley, Mr. Wyatt, Mr. W. Cubitt, the late Mr. Alexander Wright, Mr. Bazalgette, and Mr. Marrable, and they gave the fullest consideration to the subject. They believed that they should be able to prevent the escape of gas. The Board would do their best to improve the subways, so as to avoid any of the evils which had been referred to.

The memorial was referred to the Streets Committee for consideration and report.

THE PROSECUTION OF DR. MOORE BY THE BETHNAL GREEN BOARD OF GUARDIANS.

With a degree of persistence in wrong which, to the great majority of people, seems remarkable, the Board of Guardians of Bethnal Green continue to pursue as far as they are able a course of persecution against those who anxiously do their duty to the helpless and distressed.

Dr. Moore, one of their most active medical officers, has been charged by them before the Poor-law authorities with endeavouring to increase the cost of medical relief, by attending in unnecessary cases for his own profit. The evidence, however, leads to the belief, that in this instance, as in others, the discredit will fall upon themselves. The evidence which has been brought forward shows, that in October, 1853, Dr. Milroy came down from Whitehall, and called the attention of the Board to the fact that the Privy Council had issued peremptory orders relative to the summary abatement of nuisances. Dr. Milroy suggested to the Board, that all the medical officers should be formally appointed medical sanitary officers for the inspection and abatement of nuisances. In consequence, the Board of Guardians appointed the medical officers inspectors of nuisances. In this way Dr. Moore came to fill this post, and not as the Board say, from his own seeking. As our readers know, in the discharge of this duty, Dr. Moore gave offence to the parish authorities, by bringing dangerous sanitary neglects under notice, and in consequence Dr. Moore was dismissed from this post; and, no doubt, if it had been in the power of the Board to do so, he would also have been discharged from his position of medical attendant on the parish poor.

One of the charges is, that Dr. Moore has brought the Board into contempt by the promulgation of exaggerated and false reports, though the parochial authorities of Bethnal-green must be well aware that it was impossible to give exaggerated accounts of the evil and disgraceful sanitary condition of these districts. Besides, Dr. Moore was charged with having made excessive demands for fees; but this the evidence fully rebutted.

Dr. Moore, in the course of the examination to which he was subjected, said the present was not the first time the Board of Guardians had preferred charges against him. About three years ago they did so: investigation was instituted, and he was honourably acquitted. Some idea of the description of persons upon whom the guardians have depended for evidence against their medical officer may be gathered from the following part of Dr. Moore's statement:—"Mrs. Mandrell was able to go out, but she did not call to get her prescriptions, because she said 'You' [the doctor] 'are well paid, and I expect you to call upon me.' He never said he was not paid to attend pauper patients—he had to order her to discontinue the drinking of spirits. He attended her children, who suffered from scarlet-fever and were very dirty." Dr. Moore described the dirty condition of the woman's house, &c. in Hollybush-place; a locality which, he said, since then had been repaired, gravelled, and drained, the windows glazed, &c. The other charges were of a most paltry description. It strikes us that if any substantial blame could have been thrown on Dr. Moore, the parish authorities would not have failed to bring it to light. Mr. Sleigh, the counsel who defended Dr. Moore, very rightly said that the prosecution was set on foot by some who were put forward for the gratification of an interested malignity. Dr. Moore was formally charged with neglecting his patients. He had attended 1,400 patients in the year, and no limitation of time was regarded; and yet the only patient they could even allege was neglected was the Mrs. Mandrell above referred to, of whose notions of sanitary requirements we happen to have had personal evidence.

It is a fortunate thing that Dr. Moore is not altogether in the care of the parish authorities of Bethnal Green, and that the Poor Law Board have the power to decide in such cases. The whole evidence is now before the Central Board, and there is no doubt that justice will be done.

LIABILITIES OF ARCHITECTS AND BUILDERS.

THE ISLINGTON ACCIDENT.

Pearce v. *Davis, Williams, and Chapman.*—This was an action brought by Maria Pearce (in the Court of Exchequer, February 20th), on behalf of herself and children, to recover compensation in damages for the loss of her husband, who was killed by the fall of the Three Wheatsheaves public-house, in Upper-street, Islington, on the 26th of November last.

Mr. D. Seymour, Q.C., and Mr. Henry James were counsel for the plaintiff; Mr. Hawkins, Q.C., and Mr. Hopwood appeared for the defendant Davis; and Mr. Serjeant Simon and Mr. Cole for the defendants Chapman and Williams.

The defendants were, Mr. Davis, the proprietor of the Wheatsheaves; Mr. Williams, the architect; and Mr. Chapman, the builder, who constantly visited the premises, and who, it was contended, were jointly liable for the accident. The husband of the plaintiff was a carpenter, employed on the house when it fell. The re-erection of the public-house commenced on the 22nd of October last, and the accident occurred on the 26th of November following. The case for the plaintiff was, that the house fell in consequence of the undue and improper haste with which the works were carried on, the object of Davis being to open it for business on the 7th of December, when he anticipated making large profits from the visitors to the Smithfield Cattle Show, which was to commence on that day, in the Agricultural Hall. Owing to this over-haste, the mortar had not time to set and dry, a circumstance of which it was submitted the defendants must all have been fully cognizant, on the morning of the catastrophe.

Evidence to this effect having been given,

Mr. Hawkins submitted that the plaintiff had made out no case, and ought to be nonsuited.

Mr. Baron Martin said that in no way could Davis be liable; and if the other two defendants were liable, they were so separately, as architect and builder, and not jointly. He would direct a nonsuit as regarded all the defendants; but if Mr. Seymour could satisfy the Court above that there was a cause of action, he would take care that the plaintiff had a new trial. This was, no doubt, a melancholy case, and every one would sympathise with a widow who was left with six children; but of late there had been a series of attempts to cast a liability on persons engaged in building which had no real existence, and they should be on their guard against them. This was one of those instances; and however much they must lament the occurrence and its conse

nces, they ought to take care not to create espect of it a new cause of action; for if they it was impossible to say where it would end. is opinion, there was no legal liability on the of the defendants at all.

nonsuit was then entered, leave being re- ed to move the Court above upon the subject iability.

MR. BRASSY'S CONTRACTS.

R. THOMAS BRASSY, the eminent railway con- tor, is said to have entered into contracts h the Russian Government, amounting to 00,000*l.* sterling, to construct railways from Petersburg to Odessa, and from Odessa on to astopol, in the Crimea. The transactions of Brassy, since 1834, in railway contracts, e amounted to not less than the vast sum of ,000,000*l.* sterling. In every work Mr. Brassy earned a reputation for strict honour. Some generations since the family name was "De cey." Should the Crown think fit to mark its se of such a career, Sir Thomas De Bracey, ., would be a sonorous title for the greatest ur railway contractors.

ELECTION OF CITY ARCHITECT.

HE election is fixed for, this, Friday. There twelve candidates namely, Mr. Thomas D. ry, surveyor to the city of Norwich; Mr. hard Bell, of 17, Gracechurch-street; Mr. derick Chancellor, of Pinners'-hall, Old Broad- eet; Mr. Henry Dawson, 16, Finsbury-place th; Mr. William Henry Heath, 4, Broad- rt-buildings; Mr. C. W. M. Horne, 20, Guild- l-street, Russell-square; Mr. Lewis Henry acs, 3, Verulam-buildings, Gray's-inn; Mr. race Jones, 16, Furnival's-inn; Mr. Fre- ick Peck, 15, Furnival's-inn; Mr. Richard ss, 27, Queen-street; Mr. John Scott ker, 17, Park-street, Grosvenor-square; l Mr. Frederick Wallen, 68, Old Broad- eet. The office is one of great antiquity. It pears to have existed previously to the year 79. The *Times* says,—"Originally the nomi- ion to the office seems to have been with the d Mayor for the time being, who disposed of n vacancies arising. In 1703, when the cor- ation was in the habit of disposing of the ces in its gift for considerations in money, t of the clerk of the works was valued at l. It was sold in 1723, on becoming vacant, Mr. George Smith, for 630*l.* In 1749, the mmon council passed an Act for preventing sale or alienation of certain places at its posal, of which this was one. Mr. Dance, o was the architect of the Mansion House, d the office for nearly half a century— nely, from 1768 to 1815, when he re- ned. He was succeeded by Mr. William ntague, who filled the office until his death, wards of twenty years ago. Mr. Bunning, last holder of it, was then elected, at a ary of 1,600*l.* a year, subject to the payment him of his clerks and of all the expenses of office. From Midsummer, 1846, the salary s increased to 2,500*l.*; and in July, 1852, ving regard to additional and important duties posed upon the architect, under the Clerken- ll Improvement Act, his stipend was fixed at 00*l.* a year, irrespective of the expenses of his ce, for which an additional sum of 1,000*l.* a ar was granted."

HE EDINBURGH OPERATIVE MASONS' ARCHITECTURAL UNION.

MR. GOWANS delivered a lecture in connexion th this union, in the Masons' Hall, a few enings ago, the subject being, "The Leading nes of Design." It was long, he said, since he came convinced that all true shape or true portion of parts rested not upon the intuitive ception or taste of individuals, but upon ed and unalterable rules. The combination of eory and practice, or the head and the hands ned together, was necessary to produce what s admirable in architecture. With regard to hitecture, the climate, the geographical po- ion, the geological formation, and, above all, e religious belief of a people, had to do, not ly with the plan, but the exterior features of ir structures. He proceeded to show how igious belief had the most to do with the ience of design. The Athenians worshipped God whom they did not know, and the geo- tric figure which they used to symbolise that unknown God was the circle, as representing Unity and Eternity. That figure, along with the square, they used in a primary way in determining the general proportions of their buildings, while the elliptical curve, which was the geometrical development of the circle, was used for the decorative feature. The Gothic or Christian style arose and was developed from the faith which we now hold in regard to the triune God, or three in one. That being so, it could easily be understood how the founders of our early English symbolised their belief by adopting the circle and equilateral triangle combined—the circle signifying the All-one God, and when divided into three, forming the equi- lateral triangle, which represented, as true as geometric figure could, the three equally per- taining to the one. He held that our churches should not only be designed upon true lines, but they should be constructed with the best ma- terial; and the internal arrangement should be so devised that all that was about the church would give the impress of the worship to which it was dedicated, keeping in view the hearing, seeing, and comfort of the congregation.

IMPORTANT RAILWAY COMPENSATION CASE.

Kilshaw v. The London and North Western Company.—A case of considerable interest to parties connected with railway matters has been investigated at St. George's Hall, Liverpool. A sheriff's jury had been empannelled to try a claim made against the London and North Western Railway Company by Mr. John Kilshaw, of Bootle, for the compulsory sale of a quantity of land at Bootle, required for the Bootle branch railway, now being constructed by the company. Mr. Kilshaw claimed 10,000*l.* for the purchase of the land, and 2,175*l.* compen- sation for being compelled to incur a breach of covenant towards three several parties to whom he had leased the land in question. The court was much crowded on both days by a considerable array of engineers, surveyors, and others interested.—Mr. Brett, Q.C., stated the case in detail on behalf of the claimant.—The claimant and other witnesses having been examined, several surveyors and valuers were called on his behalf. Mr. John Cunningham valued the whole of the three lots of land, including 10 per cent. for compulsory sale, at 6,823*l.* 18*s.*; Mr. Owen Williams, 6,474*l.* 5*s.* 9*d.*; Mr. Weightman, 7,864*l.*; Mr. J. B. Hughes, 7,193*l.* 14*s.* 9*d.*; Mr. Ellison, 6,788*l.*; Mr. John Young, 6,834*l.* 7*s.* 5*d.*; and Mr. J. Scourfield, 7,040*l.*—Mr. Picton was called for the company, and valued the land at 3,682*l.*; Mr. Culshaw, 3,297*l.*; Mr. W. H. Gee, 3,009*l.* 3*s.* 9*d.*; and Mr. Shelmerdine, 3,649*l.*—After the learned counsel had replied on the evidence, the jury returned a verdict for the claimant for 5,020*l.*, in- cluding 133*l.* to Mr. Tomkinson for damage.

CLERKS' SALARIES.

SIR,—The clerks to an extensive London building firm beg to call your attention to an advertisement in one of your recent numbers, viz.—

"*To Surveyors' and Builders' Clerks.*"

Wanted, in the Office of a first-class Builder, a respect- able and intelligent Young Man, *aged about* 25, one thoroughly competent to make surveys, assess dilapida- tions, take out quantities, prepare estimates, and to undertake all the necessary duties connected with the business of a surveyor and builder. *Salary at first* 25*s. per week.*"

Now it is almost needless to remark that, for a clerk to come up to the advertiser's standard of ability, years of experience are required, and he expects to find a young man, at the age of twenty-five, with this experience, who would, for the *magnificent* salary of as many shillings per week as he is years old, perform the varied and responsi- ble duties required.

Surely builders' clerks ere long will have to pay for their situations like waiters in a dining-room.

PENTAGON.

COMPETITIONS.

Huddersfield.—The design of Mr. William Hill, architect, of Leeds, has been selected, in a limited competition, for the proposed Methodist New-Connexion Chapel, High-street, Hudders- field. The old chapel will be immediately pulled down, and the ground cleared for the new build- ing, which will be a large Gothic edifice, capable of accommodating upwards of fifteen hundred persons. The estimated cost is upwards of 6,000*l.*

Wantage.—During the past week the com- mittee of the new corn exchange have been engaged in selecting a design from the twenty- five competition designs sent in. That furnished by Mr. Wheeler, of London, is the one selected. The exterior is composed of red brick, with white stone bands. The building will also include magistrates' and commissioners' rooms, savings bank, and company's rooms. Mr. Dodd, of Reading, and Mr. Brooks, of London, receive each the sum of 10*l.*, their designs being con- sidered as standing next.

Manchester Cemetery.—The unsuccessful can- didates very justly complain that only the selected designs are being exhibited; and they ask, rightly enough, why they, the unsuccessful, should be deprived of the only benefit, publicity, that can now accrue to them in return for their labours.

St. John's Church, Carlisle.—Competitors assert that the committee have totally set aside the instructions which they issued to architects for their guidance, and which were to design a church to seat 1,000 persons, and to cost 3,000*l.*, having awarded the first place to a design which, when erected, will only seat 800 persons, and was estimated by several practical men who saw the several designs, to cost at the least 5,000*l.*

METEOROLOGY.—RAIN-FLOODS.

A CLOSE study of meteorology is necessary to the civil engineer. The study of one life in one locality is not, however, sufficient to learn the possible excesses of nature. The engineer must also look beyond "averages," and prepare for the greatest possible excess. The following record of an extreme flood in Melbourne ought to teach a lesson to the engineers of that new and most interesting country:—

"The present year has been characterised by the severest storm and the greatest flood (in the Yarra) ever experienced. The flood attained its greatest height on the 17th instant. Sandridge became an island. Traffic was suspended for some days on the Hobson's Bay Com- pany's lines. At Heidelberg, the Yarra rose some 50 feet in perpendicular height; and at Dight's Mills—a three- story stone building—it encroached several feet upon the roof. No vessel could enter or leave the harbour for about a week. Fortunately, no serious casualty occurred in the bay. The water reached high up into King-street, and boats plied in Flinders-street and Flinders-lane. Several lives were lost, and a large number of wooden houses were carried away. Subscriptions for the sufferers are now being raised."

The lesson taught is, that what has occurred once may be repeated, and should be guarded against. Some rivers in South Africa rise as much as 70 feet vertical in flood. Rivers in Great Britain rise from 10 to 25 feet vertical in flood: the lakes of Killarney rise occasionally 9 feet; Derwentwater lake, 8 feet; and Basenthwaite lake, 12 feet vertical, in flood.

DESTRUCTION OF LEAD.

I BEG to inform your correspondent "S." that the water "perfectly pure to the taste" is only too certain to have caused the mischief he la- ments. As the *Builder* has often told the public, the water in such a case is not fit for drinking or cooking purposes. It is poisonous; and though the injury therefrom might be slow, it would be sure. I should recommend him to have a cistern of iron or slate; but if he continue to use lead, he will save his health and his pocket by painting the inside of the cistern with two or three coats of good oil paint. It is a great pity this practice is not general. "S." will find some valuable information on the subject in past volumes of the *Builder*.

I am glad the *Builder* continues to raise its voice on the subject of domestic poisoning. Impure air, bad water, and unwholesome food are strictly poisons, constantly and fatally at work; but because of their comparatively slow action, and people's ignorance, carelessness, and indifference, are allowed to annually carry off thousands.

"S." you may perceive, seems only to regard the *money* view of the matter. P. E. M.

As the original introducers of wrought-iron cisterns, we may be excused from the suspicion of self-interest in coming forward to give information upon a valuable subject. Iron cisterns possess many advantages: no frost injures them, and the effect on the water is decidedly tonic and wholesome; and in matter of cost, we think "S." 's cis- tern will sell for nearly as much, as old lead, as will provide him with a new iron one. In this case, as in many others of wants in the building trade, a reference to your adver- tising columns points out where to go for a remedy.

BURNEY & Co.

SCHOOLS OF ART.

The Hanley School.—The annual examination of this school has just taken place. Mr. Eyre Crowe, Government Inspector, attended. On Wednesday, about 160 presented themselves for examination in the elementary, or first grade, chiefly from the nine public schools taught through the agency of the School of Art. The same evening, about seventy were examined in the more advanced stages. On Thursday, the progress of the students was tested by reference to the works executed last year. Twenty-five local medals were awarded, six of them to three students; and a specimen of painting on porce-

lain, after Mulready, by Elijah Dunne (the recent successful competitor for the Society of Arts' premium for porcelain painting) was chosen for national competition. The prizes offered by Alderman Copeland, M.P., and Mr. Grenfell, M.P., were awarded. The school, under the management of Mr. Carter, the master, has progressed in a manner which gave satisfaction to the inspector.

The Stoke-upon-Trent School. — The annual examination at this institution was confined to exercises in the first and second grades. The drawings and models, instead of being examined at Stoke, as heretofore, for local medals, will this year be forwarded to London, in March, for that purpose, in consequence of the school having come under the new regulations for payments to be made by results. The prizes, amounting to 10*l.*, offered by Mr. Beresford Hope, and the committee's prizes, were awarded.

Petition to Parliament as to Schools of Art. Mr. Potter, M.P. for Carlisle, has presented a petition to Parliament on this subject. The preamble says :—

"That your petitioners, whilst admitting that the grant made by your honourable House for the purpose of forwarding art education in the United Kingdom is a large and liberal one, and has been of especial service during the last few years; yet, as appears to your petitioners, a large and increasing portion of such grant is expended at South Kensington, whilst the amounts allotted to the majority of the provincial schools have been year by year lessened; and further, that by a minute recently passed, the amount received by such schools will be totally inadequate to recompense the masters of schools, without large pecuniary aid from voluntary subscriptions."

The petitioners are the committee of the Carlisle school, and they pray for the appointment of a committee of inquiry, or to grant such other relief as may be deemed expedient.

CHURCH BUILDING NEWS.

Horsham (Sussex).—Attention is now being called to the deplorable state of the parish church here, with a view to its restoration.

Gloucester.—Among the works now in progress at the cathedral, arrangements are being made for warming the choir. The workmen, in excavating a sort of tunnel in the crypt, came upon a skeleton, which had originally been buried without a coffin, although with the bones were found remains of the boots of the deceased person, in a good state of preservation.

Cowleigh (Malvern).—The new church here has been completed. The style is based on the Early English. Mr. Street, of London, was the architect. The edifice comprises nave, chancel, aisles, clerestory, &c. The aisles are separated from the nave by five pointed arches on each side, supported by circular pillars, without capitals, the masonry at the spring of the arch overlapping the pillar and answering the purpose of a cap. The roof, which is boarded with plain deal beneath the rafters, is canted, almost semicircular, and steep pitched, having plain tie-beams and king-posts; and the clerestory has one large trefoil-headed light, beneath a semicircularly arch externally. The aisles have open-timber, plain, lean-to roofs. In the aisles two- and three-light trefoil-headed windows are under square heads. The great east window has three lights, with three trefoils in the head, and the west one four lights, with a sexfoil and two quatrefoils in the tracery. Three steps lead up to the chancel, and three similar ones to the communion-table. There are a credence-table, piscina, and sedilia. There is a panelled boarded ceiling over the chancel, and on its north side is a small vestry. Dividing the chancel from the nave there is a low stone screen, being ornamented with small sunk panels, having tracery-like windows. A stone pulpit, at a very moderate elevation, projects over the screen on the south side from the chancel into the nave, in a semicircular sweep. Its moulded top is supported by nine small shafts, of various coloured marbles, between which considerable space is left, so that the pulpit is open on all sides. A smaller circular base supports the whole. The reading-desk, or lectern, on the north side of the chancel screen, is a mere continuation of the choir seats. Open movable benches are supplied for the nave, being of plain deal varnished, and the floor is tiled throughout (no boarding) in black, buff, and red tiles, set lozengewise. Malvern Hill stone (rubble) and Bath stone facings and dressings are used externally, and Cradley stone inside the building, the sober grey colour of the latter harmonizing with the lighter complexion of the free stone. The pulpit is of Painswick stone. Skinner, of Bristol's warming apparatus is applied, the chamber for the furnace and water-pipes being constructed under the S.E. angle of the church. There are at present no stained-glass windows in the church. Funds, however, are wanting to complete the structure, and several hundred pounds will be required to pay the architect's charges, and to drain and level the churchyard.

Frome.—The new church of St. Mary the Virgin, at Frome, has been consecrated. The building will form a chapel-of-case to the parish church for the suburbs of Frome called Welshmill, Innox-hill, and Fromefield. The new chapel stands on the eastward or townward slope of Innox-hill, and its site was anciently called "The Ladye Mary Spring Fields." The chapel is in the Early English style. The building consists of nave, chancel, south porch, and a small organ-chapel, with a vestry adjoining the chapel. The only entrance is by this south porch, the capitals of the pillars of which are symbolically carved. The nave is lighted with stained glass windows, and over the pulpit is a dormer window of geometrical design. The chancel is of semi-octagonal form, each compartment being filled by a single-light window, executed by Messrs. Clayton & Bell. The reredos is of carved work. The three panels are filled with sculpture, the centre group representing the Saviour bearing His Cross, while on each side are the angelic host. The panels are divided by polished Devon marble columns; and the whole is surmounted by a cornice, ornamented with the ball-flowers, and terminating in a carved finial. The altar-space is inlaid with Minton's encaustic tiles, of the cross and *fleur-de-lis* pattern; while the altar-steps are of polished limestone. The roof of the chancel is decorated. The ground is blue, with golden stars; and over the altar is a golden glory. The main timber is picked out in various colours. A dwarf stone screen divides the chancel from the nave, the columns being of dressed red Mansfield stone, with carved capitals surmounted by trefoil arches. The organ is by Vowles, of Bristol, the pipes being illuminated by Horwood, of Mells. The aisle is floored with encaustic tiles, of red and black pattern, the space under the seats being boarded. The fittings are all of stained wood, in harmony with the timber roof. The walls are of local stone, hammer-dressed and pointed. Externally, over the chancel arch is a small bell-cote, surmounted by an iron gilded cross. At the west end is a bell-gable. Adjoining the chapel, on the northern side, are a school-room and class-room; and adjoining this again is the clergyman's residence. The architect was Mr. C. E. Giles; and Messrs. Brown were the builders, and Mr. Tookey clerk of the works. The carvings were done by Mr. Ezard, of Bath. Mr. J. W. Singer supplied the iron-work.

PROVINCIAL NEWS.

Yarmouth (Isle of Wight).—The construction of a large brick-kiln has been commenced in a field at Wilmingham, on the borders of the river Yar, and within a short distance of Yarmouth, by Mr. Bignell, of Carisbrooke. We hear Mr. Bignell has a contract for several millions of bricks for the extensive fortifications at Hurst and other places. Upwards of 100 hands, it is said, will shortly be employed in the manufacture.

Glastonbury.—The Town-hall having been deemed too small, Mr. James Austin, of the Abbey, has offered an eligible and central site for a new one, the entrance to which will be at the Abbey gates, High-street. It has been resolved by a numerous and influential public meeting, to accept the offer, and shares in the project have been taken.

Lymington.—The new Volunteers' Hall, now in course of erection by the Messrs. Hollis and Rashley, is approaching completion. It will give more than double the space of the present Assembly-rooms, being 76 feet in length, and 40 in width, and will afford ample room for the movements and evolutions of the corps. The hall is to be approached from a wide platform of steps, which are to be ornamented with cannon and other military decorations. Mr. Inman has built this hall for the free use of the volunteers. It will also offer facilities for any large public meeting or general festival, and will thus supply a want long felt in Lymington, of a public room large enough for any purpose that may be required.

Plymouth.—The number of new buildings which have been recently springing up in the neighbourhood of the Three Towns shows that trade and commerce are flourishing in this locality. Many who have been absent from Plymo for some length of time express astonishment the great changes which a few years have m in the architectural appearance of the stre and the increase there has been of late buildings of a good and substantial charact Mr. Derry, the ex-mayor, has just completed range of stables in Station-road, which a another to the town improvements. This bl of buildings has been designed by Messrs. Fos & Son, architects, and built by Messrs. Call Pethick. There is accommodation for 30 hors The large stable is divided into 25 stalls, c structed of timber stained and varnished. T partitions are bound with iron headings. T mangers are also of iron. There is a clear sp of 6 feet 3 inches between these partitions. T length of this building is between 70 and 80 fe and the ventilation has been attended to. T loft overhead is capable of containing fifty t of hay. On this floor a chaff-cutter is plac which, together with an oat-bruiser, is worked a small steam-engine, of about 3-horse pow The corn loft is from 50 to 60 feet long. T building also includes a harness-room, wh fifty sets of harness may be conveniently hu up. A large iron tank or cistern, constructed Messrs. Moir & Sons, of Plymouth, has be erected in a convenient spot. It is capable containing about 2,000 gallons of water. T walls of the building are composed of rou stone. The iron work, of which there is a go deal, has been supplied by the Plymouth Engi Works Company.

Books Received.

The Ninth Annual Report of the Wesleyan Cha Committee; 1863. London: printed by Ha man, Brothers, Gough-square, Fleet-street.

This report is illustrated by a variety of engrav views of chapels belonging to the Wesleyan bo throughout the country. Some of the desig are very good, and are as well set forth as cou be desired. The following summary of la year's transactions will show what the Wesleya are doing in the way of chapel and school buildi and enlargement;—

Miscellanea.

South Wales Memorial of the late Prin Consort.—It is proposed (though not qui settled), to commission Mr. Durham to execu a reproduction of his statue of the Prin Consort, forming part of the Memorial of the 18 Exhibition, set up in the Gardens of the Roy Horticultural Society. The site talked of Tudor-square, Tenby.

The Hotel Movement.—The fourth ordina general meeting of the shareholders of t International Hotel Company has been held the hotel, London Bridge. The gross receip for the past half-year had been 13,655*l.* 0s. 11 and the expenditure 9,103*l.* 2s., giving a n profit of 4,551*l.* 18s. 8d. The directors recon mended a dividend at the rate of 6*l.* per cen per annum, which would enable them to car forward 1,402*l.* 18s. 9d. to the credit of the ne half-year's account. The report was adopte and the dividend as recommended agreed to.

The Literary Fund Society.—H.R.H. the Prince of Wales has signified his intention of presiding at the next annual dinner of the Literary Fund. This will be the first occasion on which the Prince has acted in such a capacity. The dinner will take place on the 18th of May, in St. James's Hall.

Means of Egress from Public Buildings.—The movement continues in the provinces in favour of increased means of egress from public buildings in case of alarm from fire or other cause. The Bristol *Journal* calls attention to the very defective state of most of the public buildings of Bristol in this respect, and alludes especially to the Broadmead-rooms with but one door through a long and narrow passage. The rooms are leased; but belong to the Corporation. The necessity of opening a second door to and from the Maidstone Corn Exchange has been under the consideration of the local council, and the subject has been referred to the Market Committee.

Co-operative Progress at Blackburn.—The new premises of the Blackburn Cotton Spinning and Weaving Company, Limited, have been opened. The company consists entirely of operatives resident in Blackburn, Withnell, Accrington, Church, Preston, and the neighbourhood. The proposed capital was fixed at 60,000*l.*, in shares of 5*l.* each. At the present time the amount subscribed is 14,000*l.*, of which the sum of 11,000*l.* is paid up. The weaving shed has been erected, and preparations are being made for the building of a complete mill, shares for which have not yet been issued. The cost of the building, so far as it has gone, is about 8,000*l.* The shed will accommodate 520 looms.

Liability of Metropolitan Board of Works for Compensation.—A case of public importance as involving the liability of the Metropolitan Board of Works to make compensation to such persons as have suffered by a loss of trade, and in other ways, in the course of the alterations and improvements effected by that body, has been decided by Mr. Cook, at Worship-street. The claimant was Mr. Richard Pyle, in extensive business as a soda-water, ginger-beer, and muffin and crumpet maker, in Willow-walk, Tabernacle-square, Finsbury. After evidence had been given and counsel heard, Mr. Cooke said, that subject to the objection that more than six months had expired since the alleged damage to the claimant's business took place, and which entitled the Board of Works to a verdict, he was of opinion that the complainant was entitled to recover for the full amount of his claim. It was not contended by the Board that he was not entitled to recover for the actual damage done to the building indeed, they had offered him compensation for the same, but they contended that the plaintiff was not entitled to recover for loss of profits of business. Now he thought the case of "Senior v. The Metropolitan Railway Company" was conclusive upon this point, and that the loss of the profits of trade was a proper subject of compensation. He was unable to distinguish this case from that in which a private company were the defendants.

The New Bridge at Walton-on-Thames.—Many of our readers will remember the old bridge across the Thames to this town, with its steep roadway and lofty arches, which fell down some years ago. It has lately been rebuilt. The new bridge is on the same site, and has the same number and spans of arches as the old one. It has also the same width, 21 feet in the clear; but instead of the steep incline and high summit which were so inconvenient, the approaches are commodious, and the highest point of the roadway in the centre is nearly 20 feet below the old road, though the height and space for navigation are much greater than formerly. This result has been obtained by the use of wrought iron. There are two segmental lattice girders at each side of the bridge, the roadway being supported by cross girders. There are two spans of 44 feet and two of 62 feet, the total length of bridge from shore to shore, including the piers, being 233 feet. In addition, a considerable length of the old flood viaduct was pulled down and lowered, making the total length of new roadway and approaches, included in the contract, about 480 feet. The total cost, including the land arches, river bridge, and all the works, was very little over 4,000*l.* Mr. E. F. Murray, of Westminster, was the engineer, and Messrs. Kennett, Spink, & Else, of Bridgwater, were the contractors. Mr. Murray has prepared a design for a new bridge at Hampton Court, which is just about to be commenced.

Iron.—At a meeting of the Ironfounders' Association, on the 7th of January, it was resolved:—That an advance of 1*l.* per ton be made from this date on the price of all castings.

Wilson's Endless Band Sawing Machinery. This machinery, constructed by Mr. Joseph Wilson, builder, Bradford, Yorkshire, consists in the use of a large endless band saw, 8 inches broad, and No. 15 gauge, extended over two large pulleys or drums, supported on massive iron standards, bolted to ashlar foundations; also of travelling tables, 45 feet long, having suitable bearers or runners. The machine is capable of being worked by an engine of 7-horse power. The tables are arranged to carry the log past the saw to any extent, without stopping for re-adjustment, by which the necessity for transomes is avoided. This machinery, comprising the particulars already named, with other means combined, is at once adapted, says the *Engineer*, to the purpose of cutting up all kinds of round or square timber, mahogany logs, &c., to the depth of 4 feet and upwards, if required. It is equally serviceable for reducing the same into scantlings or boards.

The Study of Fine Art in Cambridge University.—The Rev. W. Emery, the chairman, and Rev. W. J. Beamont, the secretary of the Cambridge School of Art, have been endeavouring to promote its more general study, by advocating the establishment of an art tripos in the University course. Their proposal, as we learn from a review of Mr. Beamont's pamphlets, in the *Cambridge Chronicle*, is this, viz., for undergraduates to pass the Little-go as usual, and then to follow the study of fine art as a speciality, and to take a degree in art, after an examination in sculpture or painting: it is said, with some degree of force, if the University confer a degree in music, or physic, or divinity, or surgery, or law, why not in art? It is argued, that the Disney Professor of Archæology and Art might combine the study of fine art in his curriculum, with the aid of the master of the school of art. From the manner in which the proposal was received at a recent meeting of the members of the senate in the Arts School, however, there is not much probability, our authority thinks, that it will be carried out.

The Royal Academy and the Exhibition Building.—On Lord Elcho, in the Commons, asking the First Commissioner of Works whether the Government had taken any, and, if so, what steps, to give effect to the recommendations of the Royal Commission on the Royal Academy; and when the removal of the whole of the late International Exhibition building would be completed, and what was intended to be done with the site; Mr. Cowper replied that the Royal Academy had been in deliberation on the subject first mentioned for some time, but hitherto they had made no report. The site of the Exhibition building was not yet cleared, and the Government had remonstrated with Messrs. Kelk & Lucas on the subject. At present, the removal was going on rapidly. Preliminary steps had been taken towards the decision as to the building hereafter to be erected on the site. He had invited a competition of architectural plans and designs of the buildings hereafter to be erected, and they would be with reference to the disposal of the whole site.

Sanitary State of Marylebone.—The monthly report on the health and climate of St. Marylebone, during January, 1864, by Robert Dundas Thomson, M.D., F.R.S., medical officer of health for the parish, has been issued. From this report it appears that the intensity of the cold in the early part of the month had a very distinct effect in augmenting the mortality list. The deaths have been 466 against a mean in eight years of 399. The deaths exceeded the births by seventy-four. The cold, if it exerted any effect on zymotic diseases, seems to have held them rather in check, since the number of deaths from these complaints was 50 in the four weeks of January, contrasted with 91 in the five weeks of December. Scarlatina, which has been so fatal in previous months, has fallen to 18 from 39 in the preceding five weeks; measles from 10 to 4; whooping-cough from 14 to 10. Bronchitis has proved fatal to 114 against 49 in the five weeks of December. The number of cases of sickness returned from eleven institutions has been large, 5,582 in four weeks, against 5,734 in the preceding five weeks of December. It is somewhat satisfactory to know that the deaths from smallpox have been 2 against 4 four in December, and that the cases reported are 12 against 28 in the preceding month.

Factitious Blocks.—Sir: Observing in the last number of the *Builder* that a patent has been obtained for manufacturing factitious blocks of wood as therein stated, by Gustave Colomb, I beg to say the invention is not new. The very same thing has been done in my father's shop for the last thirty years.—T. Waghorn, Jun.

Gas.—The Newport Gas Company have declared a dividend of 10 per cent. per annum on Class A shares, and 7½ on Class B shares.——The Stafford Gas Company have declared a dividend of 7½ per cent. per annum.——The Andover Gas Company have reduced their price 1s. per 1,000 feet, or 10 per cent. on previous prices.——The Liverpool United Gas Company have declared their usual dividend of 10 per cent. per annum for the last half-year.——The Winchester Gas Company have reduced their price from 6s. to 5s.——The Ipswich Gaslight Company have made a further reduction in price from 4s. 6d. to 4s. The demand for their gas is so much on the increase that they require new capital to carry out requisite works. The company have just declared a dividend of 10 per cent., free of income-tax, besides "arrears of dividends."

Funeral of Mr. W. Dyce, R.A.—On Saturday last, at noon, the mortal remains of this distinguished artist were interred in the churchyard of St. Leonard's, Streatham, with a solemn service, amid a hearty feeling of sympathy on the part of his brother artists and the parishioners of Streatham. The boys of the Chapel Royal, accompanied by the Rev. T. Helmore, priest in ordinary to the Queen, were present in surplices, and performed the church service with full choral solemnity. Among those present, besides the widow, with the two youthful sons and the brother-in-law (Mr. Brand) of the artist, were Mr. Maclise, R.A., Mr. E. M. Cope, R.A., Mr. J. P. Knight, R.A., Mr. J. R. Herbert, R.A., the Rev. Cyril Page, Mr. B. Ferrey, &c. Mr. Dyce had finally determined to give up his profession in consequence of ill health, and at the time of his death was in treaty for an estate in Kent—Orpington Priory, St. Mary Cray. His ill-health had also induced him to resign all attempt to complete his engagement to assist in the pictorial decoration of the House of Lords, and he had returned to the Treasury all advances made to him on that account.

Hillfield Hall, Warwick, destroyed by Fire.—One of those ancient manorial buildings which are the pride of the county of Warwick (says the *Birmingham Gazette*) "has been consumed by fire. Hillfield Hall is well known to the antiquaries of Warwickshire as a fine specimen of the good old homesteads of Old England. It was a building of the most pure Elizabethan style of architecture, and is said to have been built in the year 1576. There is a tradition, and by many believed to be true, that "Good Queen Bess," when on her journey to pay her memorable visit to Kenilworth Castle, passed a night in a room in the house. About four years ago the hall was completely restored, at an expense of about 3,000*l.*, and was held on a seven years' lease by the present tenant. The origin of the fire is, as usual, a mystery; but the probable reason was, that the piping from the stoves had become heated so much that it set fire to one of the beams. Neither the hall nor the furniture, it is believed, was insured."

Lectures for Working Men.—Metallurgy: Iron.—Dr. Percy has given a lecture on this subject at the Royal School of Mines, Jermyn-street. The lecturer showed a specimen of iron slag, brought from the vicinity of Mount Sinai, probably bearing a date anterior to the time of Moses. The purest iron here marked is procured by the battery process. This method is made use of in coating copper-plates with a film of iron, which preserves them when used in printing. Reference was made to the use of carbonic oxide as a reducing agent. If brought in contact with the heated oxide of iron it turns into carbonic acid, reducing the metal to the pure state. The compounds of carbon and iron are very important under the forms of wrought-iron, cast-iron, and steel. If we examine cast-iron we find fully 4½ per cent. in the form of graphite, which is not in combination with the iron. In pure iron the carbon is diffused through the mass, which accounts for its softness. The lecturer, after giving an interesting account of those compounds, remarked that the principal ores of iron were the magnetic oxide, the red and brown hematite, the spathic ore, and the clay-band ironstone.

THE ROYAL ARCADE PROJECT.—The Bill for the proposed Regent-street and Bond street Arcade has been thrown out in the Lords, at the instance of Lord Derby, because "the influential inhabitants of the parish were opposed to the project."

ROTTERDAM. — The Schieland Palace, the museum and picture gallery of Rotterdam, situate near the high-street, has been destroyed by fire. It was a stately building of great extent, occupying a large area of ground, and was the residence of Napoleon I. in 1812, when he invaded Holland.

THE JOINERS' STRIKE AT ST. HELEN'S.—This strike still continues, without probability of a settlement. There is much distress among the families of the turn-outs, whilst the masters are almost at a standstill with their work. Every new man that makes his appearance is hunted up by the turnouts and ultimately driven away.

MONUMENTAL.—The foundation stone of the Lucknow memorial was laid on the 2nd of January. It is to be erected, "To the memory of Sir Henry Lawrence and the brave men who fell in the Residency A.D. 1857." The design is a column 40 feet high, surmounted by an Ionic cross, and ornamented by scroll sculpture. ——A statue of the Empress Eugenie is to be erected in the market-place of Puebla. Several proposals have been made as to the costume. "The first plastic representation of the crinoline," however, seems to be the one most favourably accepted.

CAPTAIN MEAD'S METHOD OF CENTRE ARCH STRIKING.—In an account of the completion of the Morhur Bridge, in a letter addressed by Captain Mead, the engineer in charge of the works, to the superintending engineer of the division, and reported in the *Engineering Journal* of Calcutta, it is stated, that in place of blocks he substitutes sacks filled with sand, to which the weight of the centre and the portion of the arch resting on them is transferred after keying. The mouths of the sand-bags are opened simultaneously, and the sand running out lowers the centres uniformly and safely, without any violent or sudden shock. We have heard of such an arrangement before.

RAILWAY MATTERS.—The traffic receipts of railways in the United Kingdom amounted, for the week ending the 6th of February, on 11,119 miles, to 552,977*l.*, and for the corresponding week of last year, on 10,734 miles, to 499,816*l.*, showing an increase of 412 miles, and of 53,161*l.* in the receipts.——Under the auspices of the General Credit Company, a prospectus has been issued of the Great Eastern Northern Junction Railway, with a capital of 1,500,000*l.* in shares of 20*l.* The object is to connect London *vid* the Great Eastern line, with the northern coalfields and the manufacturing districts of Yorkshire and Lancashire. The route will be from St. Ives to Askern, and the length 108¼ miles, exclusive of 21¼ miles for branches. The Great Eastern Company are to provide half the capital, and 750,000*l.* are now offered for subscription.— The bill for sanctioning a central station at the Stone Bridge, Bristol, with a through junction to the Exeter line, has passed the select committee on standing orders.

THE METROPOLITAN RAILWAY. The half yearly report of the directors says, "They have arranged all matters in differences with the Great Western Railway Company. The settlements of the accounts for the working of the line has been concluded on the basis of this company receiving 57½ per cent. of the gross receipts, allowing the Great Western Company 42½ per cent. for their working expenses. The net receipts from traffic during the half-year up to the 10th of August, payable by the Great Western Company under the above arrangement, amounted to 6,787*l.* 1s. 2d., and for the four months and twenty-one days during which the line has been worked by this company, to 20,653*l.* 14s. 7d. The directors recommend that a dividend be declared at the rate of 5 per cent. per annum. They have resolved on constructing the extension to Finsbury with four lines of rail throughout, and sufficient land is being purchased for that purpose. They have submitted for the consideration of Parliament two extensions, one from Paddington through Bayswater and Kensington to Brompton, the other from Finsbury towards the docks. Upwards of 1,631,000 passengers have been conveyed over the railway during the past six months, although from the opening of the line there has never been a sufficient plant to work it adequately.

CHESTER ARCHITECTURAL SOCIETY.—The fourth monthly meeting of the session was to be held at the society's rooms on the 23rd inst.; the Rev. Edward R. Johnson, minor canon, to read a paper "On the Roman Wall between the Tyne and Solway."

NEW THEATRE IN MARSEILLES.—The Marseillese journals announce that a large theatre has been built in that city by M. Pereire, in the passage bearing his name. The pit will accommodate 2,000 spectators, and the boxes and galleries as many more.

PROPOSED NEW HOSPITAL FOR THE NORTH-EAST OF LONDON.—A meeting of a number of influential gentlemen, principally of the vicinity of Shoreditch, has been held for the purpose of promoting this object. The Rev. T. S. Evans, vicar of Shoreditch, was in the chair. Appropriate resolutions were adopted, and a committee was formed to carry out the object in view.

ASCENT OF HOLY RHOOD SPIRE, SOUTHAMPTON. Workmen have been employed in repairing the tower and spire of this church. When the requisite scaffolding was erected, and ladders were got into position, a man climbed to the top, and the ship which forms the vane was taken down with the view of being regilt. It was taken down for a like purpose in 1824.

COPPER PAINT.—A new pigment has recently been introduced at Paris by M. L. Oudry, of the Auteuil Electro-Metallurgic Works. He first obtains an absolutely pure copper by throwing down the metal by a galvanic process. He then reduces the precipitate to an impalpable powder by stamping. This powder is then combined with a particular preparation of benzine, and used in the same way as ordinary paint. Bronzed effects are produced upon it by means of dressing with acidified solutions and pure copper powder. The articles painted with the new material have all the appearance of electro-bronze, whilst its cost is less than one-sixth. It will last from eight to ten years. M. Oudry also proposes to substitute benzine oil for linseed and other oils, over which it is alleged to possess great advantages.

SEPULCHRAL REMAINS NEAR INVERNESS. — A rude sarcophagus, of sandstone slabs and micaceous gneiss rock, covered by a slaty sandstone slab, with obvious glacial scratchings on the upper side, has been discovered upon the very edge of the great 90-feet gravel terrace, which overhangs the valley of the Ness, and associated in locality with the chief local antiquities, called the Fairy Hill of Tommahurich, and the vitrified Forts of Kessock and Craigphadrick. The sarcophagus is only 4 feet 10 inches long, by half as broad, yet it contained three skeletons, one of a child, but all small. They seem to have been doubled up, with the faces downwards. There was also an urn of baked clay, with fragments seemingly of another, along with the skeletons. The sarcophagus did not lie east and west, but north and south. The position of this tomb, on the edge of the geological "terrace," is curious, as are also the glacial scratchings on the upper side of the slab covering; but the relationship may be merely accidental.

NEW IRON BRIDGE AT RHYL. — Messrs. McKenzie, Clunes, & Holland have just completed a contract for the construction and erection of a wrought-iron lattice bridge, to carry the turnpike road and a tramway across the estuary of the river Clwyd, near Rhyl, North Wales. The ironwork consists of two spans of lattice girders, 81 feet long; one of 76 feet 6 inches, and a drawbridge opening of 47 feet 6 inches in the clear; the whole length of the bridge being 286 feet. The girders are 6 feet deep, and width from centre to centre 22 feet 6 inches. The piers are three in number, resting upon 18-inch square timber piles, cased with iron, and capped. The pier columns are composed of patent wrought pile iron, which, when riveted together, forms a complete column of 18 inches external diameter. The ends of the bridge rest upon stone abutments. The roadway or superstructure consists of cross timbers, suspended from the main girders by bolts; the cross timbers are covered by longitudinal planking and iron tramplates for the wheels of vehicles, making a double carriage-way, and leaving a pathway for foot passengers 4 feet 6 inches wide. The drawbridge opens in two halves, and can be opened and closed by two men on each side, in five minutes. The total weight of wrought iron in the bridge is 160 tons, cast iron 56 tons, and 9,718 cubic feet of creosoted timber.

TELEGRAPHIC PROGRESS.—In a few weeks, the first line of electric telegraph on Signor Bonelli's printing system will be opened between Manchester and Liverpool. Some interesting trials of the apparatus have recently been made. On a narrow table, a small model of a tramway ran from end to end, a bridge 6 inches high spanning the middle. A long solid waggon, travelling on four brass wheels, moved up and down the rails, having on its upper surface two rectilinear openings, each extending half the length of the carriage, and each coming under a comb-like series of five needles. A simplified alphabet of type, which requires no "justifying," is placed in the opening at the end of the waggon nearest the point whence it travels. The projecting type is divided in such a manner as that the points of one set of needles shall fall over the inequalities, and be lifted in the passage of the waggon. A strip of paper, in the same way, comes under the second comb, which obeys the motion of the first, and prints the message in a legible brown character, which is due, in fact, to manganese. Three hundred words in a minute are thus despatched. The promoters only propose to introduce the machine on lines where five wires already exist. The invention may be remembered by visitors to the International Exhibition; but it has undergone several improvements since it was there displayed and tested.

TENDERS.

For the erection of a house, No. 8, Mortimer-street, Cavendish-square, for Mr. William Ford. Mr. J. Tarring, architect:—

Patman & Fotheringham	£1,588 0 0
Higgs	1,577 0 0

ALEXANDRA PARK COMPANY (Limited). Registered under "The Companies' Act, 1862." The Alexandra Park is situated 17 minutes from London, contains 490 acres of well-timbered and beautifully undulating land, 200 of which will be laid out as a Park and the remainder sold for building purposes.

Share Capital, 500,000l., in 50,000 "A" Shares and 50,000 "B" Shares of 5l. each. Debenture Capital, 500,000l.

The Debenture Capital has been created principally for the purpose of paying for the Estates, and for the purchase of the International Exhibition Building of 1862, now erecting in the Park, by Messrs. Kirk & Lucas, Contractors; and it is anticipated that the whole of this capital will be redeemed by the sale of the surplus lands.

The holders of "A" Shares are entitled to Dividend out of the net divisible profits of the Company, at the rate of 7 per cent. per annum, and of one-fifth of the remaining profits, in priority to and before payment of any dividend to the holders of "B" Shares. The holders of "B" Shares then receive all the remaining divisible profits of the Company. The original Allotee of five "A" Shares, so long as he shall retain them, will be entitled to a Season Ticket, admitting the holder to the Park and Building, when the same are open to the public, but subject to the rules and regulations of the Company, for which ticket will be forwarded on the payment for allotment.

1l. per share to be paid on application, and 1l on allotment.

DIRECTORS

Chairman—The Right Hon. the Lord Fermoy, M.P. 5, Pembridge square, Bayswater, W.

Excavators', Crowding, and Off-bearing ditto, on the shortest notice
and of the best materials; &c.
HAYES & SON,
SCOTGATE WORKS, STAMFORD.

VENTILATION—PURE AIR.

THROUGH THE EXTERNAL WALL.
These Ventilators are arranged so that the requisite quantity of
air may be admitted for the due ventilation of an apartment without
the slightest draught being felt by the occupants, and as they are
placed in the external wall, their action is not impeded when the
house is closed for the evening, at which time a constant supply of
fresh air is most required.—HAYWARD, BROTHERS, sole Manu
facturers, 187 and 189 (late 117 and 118), Union-street, Borough,
London.

POLONCEAU and SEYSSEL
ASPHALTE.

For covering Flat Roofs, Paving and Flooring of every description,
especially in places subject to damp and vermin. The Asphalte is
now extensively used in Poultry Stables (as shown above), the absence
of joints preventing the generation of ammonia. For Estimates and
Prices, &c. &c., apply to JOHN PILKINGTON, 15, Fish-street-hill
London, E.C.
Country Builders supplied with Asphalte in Bulk for covering
Footings, Barn Floors, &c. with instructions to lay it down.

GUTTA-PERCHA MILL-BANDS.—The
Gutta Percha Company beg to state that the increasing demand
for the Gutta-Percha Strapping for Driving-bands, Lubricators, &c
fully justifies the strong recommendations they have everywhere
received. Their durability and strength, permanent contractibility
and uniformity of substance; their non-susceptibility of injury from
contact with oils, greases, acids, alkalies, or water; and the facility
with which the only joint required can be made in bands of from
2-0 to 30-0 feet long, render them superior to leather for nine-tenths of
working purposes, and decidedly more economical. Every variety of
Gutta-Percha Articles, such as Tubing, Soles, Pump-buckets, Fire-
buckets, Boxes, Union-joints, Flasks, Bottles, Bowls, Tea-trays,
Curtain-rings, Galvanic Batteries, Tablotype Trays, &c. &c. manufac-
tured by the Gutta-Percha Company, and sold by their Wholesale
Dealers in town and country.
THE GUTTA PERCHA COMPANY, PATENTEES,
18, WHARF ROAD, CITY ROAD, LONDON.

BRICKMAKING,
BY STEAM OR HORSE POWER,

BUNNETT'S PATENT
CONTINUOUS FEED MACHINES
Are the cheapest and most efficient, and will make from 5,000 to
20,000 bricks per day, according to the power applied and the require-
ments of the proprietor, at one-third less working expenses than any
others
Price 75l. including royalty, and a gun-metal die for Solid, and Per-
forated or Hollow Bricks.
They also make all kinds of Sanitary Pipes, Tiles, or Moulded
Bricks, of a superior quality.
LICENCES GRANTED TO MANUFACTURERS.

EVERY ARTICLE MANUFACTURED AT THE ABOVE WORKS.
N.B. These goods are supplied to the largest Steel Smelting, Armour
Plate, and Crucible Works in the World, to which references can be
given on application.

TO BRICKMAKERS.—All Parties who
BURN BRICKS in CLAMPS are invited to inspect the NEW
MODE of SETTING, patented by Mr ROBERT WHITE, and which
may be seen in operation at the Brickfields of
J. B. WHITE & BROTHERS, Erith, Kent.

The advantages of this plan are two fold.
1st. Nearly all the bricks are burnt into stocks, and the yield of in-
ferior bricks is reduced from 35 to about 10 per cent of the total
make, which in itself represents a large permanent saving.
2nd. The bricks are so much improved in colour and soundness as
to give them a considerable additional value in the market over com-
mon stocks.
Licenses for use of the Patent granted to Brickmakers, on applica-
tion to the Patentees, 17, Millbank-street, Westminster

TO BRICKMAKERS and OTHERS.—
FOR SALE, about TWO THOUSAND CHALDRON of ASHES

Orders received at the JAMAICA COFFEE HOUSE, CORNHILL, LONDON; or at the WORKS, NORTHFLEET.

HYDRAULIC LIME and ROMAN CEMENT, manufactured by LLOYD JONES & CO. Halkin Works, Holywell, Flintshire. The Halkin Hydraulic Lime is the same as used in the construction of the Liverpool Docks, Manchester, and various waterworks, collieries, and mines throughout the country, being so long celebrated for its strong cementitious and connecting powers for masonry in water. Can be supplied by rail or water to any part of the kingdom, either in lump (loose), or ground, and in barrels and bags. The limestone can be had in full cargoes, also their cement in barrels, which is of a very superior quality and warranted pure. Orders to be accompanied by a banker's reference. Apply at the Works; or to E. & W. AARON, Agents, 66, South John-street, Liverpool.

TO BUILDERS, PLASTERERS, &c. &c.

Apply, for prices, &c. to

OCTAVIUS N. SIMPSON, STAMFORD;

and see Specimens at the Office of

Messrs. PINDER SIMPSON & SONS, 29, Savile-row, London, and at the Museum of Practical Geology, Jermyn-street, W.

The Stone (which is a perfect oolite) is raised in blocks of any suitable size, and is about four feet thick in the bed. It will stand the WEATHER, is much used for water-works and for the building and restoration of churches. When used as ashlar work it is not necessary to place it bed-wise. It works freely with a tooth-saw, and is brought at a cheaper rate than any stone in the kingdom.

*** The above WEATHER STONE is 1s. 9d. per cubic foot, delivered in London.

J. & J. FREEMAN, Merchants in the

various descriptions of STONES, GRANITE, and SLATE, for engineering and Building Purposes. Supplies direct from the quarries by vessel or railway. Direct communication with the principal ports for EXPORTATION. Wharf prices and estimates for special stone, including quarry work or other labour, forwarded on application.—Office, 27, Millbank-street, London, S.W.

NEW ZEALAND EXHIBITION, 1865. The Commissioners appointed by the New Zealand Government hereby give Notice, that an EXHIBITION of RAW MATERIALS, Machinery, Manufactures, and Fine Arts, will be held in the City of Dunedin, Province of Otago, New Zealand, in JANUARY, 1865, when rewards for merit, in the form of honorary certificates, will be given in the several sections, with the exception of Fine Arts. Space will be reserved for Exhibitors from the United Kingdom and her Colonies, the Continents of Europe and America.—Copies of the decisions, forms of application for space, and further details may be obtained from the undersigned.—By order.

JOHN MORRISON, Agent for the New Zealand Government.
New Zealand Government Agency, 3, Adelaide-place,
King William-street, London, February, 1864.

BILLING'S PATENTS.—CHIMNEY TERMINALS.—THROAT VALVES.—NOTICE to ARCHITECTS.—The Proprietors of these PATENTS have given the Widow an Interest in the same, and have considerably reduced the prices of the Articles, trusting that by so doing these useful Inventions may be introduced more generally in all new buildings.—For prices, apply to the Manager, Mr. TYLER, 12, Ampsden-street, Westminster, who will also afford any information, he having been for many years engaged with the late Mr. BILLING, in the practical curing of Smoky Chimneys.

NOTICE.

BROWN & GREEN'S KITCHEN RANGE WAREHOUSE is now REMOVED to the NEW PREMISES, 72–74, Bishopsgate-street Within, a few doors from the late Address, at No. 81. These afford accommodation for a still larger stock of their Patent Price Meid Ranges and Stoves, Register Grates, and Cooking Utensils, to meet the great public demand; and also for the consequent more extensive execution by the manufacturers themselves, of all descriptions of hot water, bath, laundry, and steam work.

72–74, Bishopsgate-street Within, November, 1863.

COMPETITIONS.

TO ARCHITECTS.—The Committee for the ERECTION of a NEW CHURCH in High Park-street, Toxteth Park, Liverpool (land 38 yards deep from north to south, fronting the north), offer the sum of 50l. to the Architect who, in their judgment, furnishes to them the best PLAN and complete SPECIFICATION, and 25l. for the second-best, subject to the following conditions:—The Church to accommodate 600 on the ground floor, and 400 free sittings either in side, west end, or transept galleries. Organ at side of chancel. The Church is to be built externally with shafted and Stourton stone-dressings, and internally with bricks, and not to cost more than 4,500l. including hot-water warming apparatus, but excluding the boundary fences. The roof to be open. Scale, 8 feet to an inch, with figured dimensions throughout. Four elevations, foundations, ground, gallery, and roof plans, sections through to the ends, and also a longitudinal section, to be furnished. The Committee will retain the two selected designs, returning those not approved. The Designs and Specifications to be sent under cover to the Office of THOMAS DARNLEY ANDERSON, Esq. India Buildings, Water-street, Liverpool, on or before the 1st day of APRIL next. The Committee do not pledge themselves to accept any Design which, on being estimated, cannot be executed for the sum stipulated.

TOWN and BOROUGH of ROCHDALE. TOWN HALL, &c.—TO ARCHITECTS.—The Corporation of Rochdale are desirous of receiving DESIGNS for a TOWN HALL, wherein are to be provided fit and convenient public offices, for holding the meetings and transacting the business of the Council, and for holding such public meetings and transacting such public business as the Council may direct or allow to be held therein. The following premiums will be given for such three of the designs as in the opinion of the Council are the highest in merit, viz.:—

For the 1st set of such designs, 100l.
" 2nd ditto 60l.
" 3rd ditto 40l.

all of which premiated designs are to become the absolute property of the Corporation. The plans, specifications, and estimates must be distinguished by a motto or device, and be accompanied by a sealed envelope containing the name and address of the competitor, bearing a corresponding motto or device to that on the plans, &c. Lithographed plans of the site, with printed statements of the offices, rooms, and conveniences required, may be had on application to the Town Clerk on and after the 5th MARCH next; and the competing Designs, &c. must be delivered at my Office, in Yorkshire-street, Rochdale, on or before the 1st day of MAY next. By order,

ZACH. MELLOR, Town Clerk.

Rochdale, 27th February, 1864.

A MANUFACTURER will give a PREMIUM of from 100l. to 300l. for the best form of METER (patented or not) for the measurement of Water, combining accuracy of measurement with simplicity of construction.—Address, X. L. M. care of Davies & Co. Advertising Agents, Finch-lane, Cornhill.

CONTRACTS.

TO CONTRACTORS and BUILDERS.—TO BE LET by TENDER, the CONSTRUCTION of a BUILDING at Penzance, for the purposes of the Town Council, the County Court authorities, a Public Buildings Company, and the Royal Geological Society of Cornwall; containing a Guildhall and County Court, Council Rooms and Offices, Savings Bank Apartments, Lecture Halls, Museums, Libraries, Committee rooms, House Keeper's apartments, &c. Plans and specifications of the Works may be seen, and all information obtained, at the Architect's Office, Council Buildings. Sealed Tenders, indorsed "Tender for Penzance Public Buildings," to be delivered at the Offices of E. H. RODD, Esq. Penzance, on or before SATURDAY, the 26th of MARCH next. The Building Committee do not bind themselves to accept the lowest or any Tender.

JOHN MATTHEWS, Architect.

Penzance, 12th February, 1864.

GLOUCESTERSHIRE.—To BUILDERS. COUNTY POLICE STATION.—The Magistrates of the County of Gloucester are willing to receive TENDERS for the ERECTION of a POLICE STATION and PETTY SESSIONAL COURT at DURSLEY. Person desirous of Contracting for the Works may see the drawings and specification, and obtain further particulars and information after TUESDAY, 1st of MARCH, on application at the Offices of Mr. E. MIDELAND, County Surveyor, Clarence-street, Gloucester. Tenders sealed and endorsed "Tender for Police Station, Dursley," to be sent under cover to the Clerk of the Peace, Shire Hall, Gloucester, on or before SATURDAY, the 19th of MARCH next. The lowest or any Tender will not necessarily be accepted

Clarence-street, Gloucester, 16th Feb 1864.

NOTICE to BUILDERS. The Commanding Royal Engineer, Gravesend, hereby gives notice, that sealed TENDERS will be received at the Office of the Director of Contracts, War-Office, Pall-mall, on or before THURSDAY, 24th MARCH, 1864, from such persons as may be desirous of CONTRACTING with the Secretary of State for War, for the term of three years, commencing on the 1st day of APRIL, 1864, for the SUPPLY of MATERIALS, and for the performance of all Bricklayers', Masons', Carpenters', Slaters', Plasterers', Plumbers', Smiths', Paviors', Painters', Glaziers', Paperhangers', and Gasfitters' Work, as may be required by the Royal Engineer Department at Gravesend, Tilbury Fort, Coalhouse Fort, Shornemead Fort, Cliffe Fort, Rifle Range, &c.

Only one contractor will be accepted for the whole of the trades; and the parties tendering must state on each schedule, according to the printed directions thereon, the rate at which they are willing to perform the work, which rates or percentage may be different for each trade, should it be deemed expedient.

Printed schedules, and every particular relating thereto, may be obtained at the Office, between the hours of TEN and FOUR, till the 10th of MARCH, after which date none will be issued.

Tenders for the above works to be addressed to the "Director of Contracts, War-Office, Pall-mall, London, S.W." and endorsed "Tender for Builders' Work, Gravesend, &c." in the left hand corner of the envelope.

No Tender will be attended to which is not filled up strictly in conformity to the instructions, as stated in the printed schedules, nor will any offer be accepted but from such persons as may be considered competent to perform the work for which they may Tender.

N.B.—The Secretary of State for War reserves to himself the right of rejecting the whole or any of the Tenders

Royal Engineer Office, Gravesend, February 25, 1864.

TO BUILDERS.—TENDERS are required for the ERECTION of a CORN EXCHANGE, MAGISTRATES' ROOMS, &c. at Wantage, Berkshire. The drawings, specifications, and conditions of contract may be inspected by the Board of Guardians, Wantage, from SATURDAY, the 12th, till THURSDAY, the 17th day of MARCH inclusive. Bills of quantities may be obtained on application to me by letter only, before WEDNESDAY, the 9th MARCH. Sealed Tenders, endorsed "Tender for Wantage Corn Exchange," to be delivered to me not later than FIVE o'clock in the afternoon of FRIDAY, the 18th MARCH. ROBERT WHEELER, Architect.

1a, Great George-street, Westminster

The Directors do not bind themselves to accept the lowest or any of the Tenders. Due security will be required for the performance of the Contract.

LANCASTER WAGON COMPANY, LIMITED.—To BUILDERS.—CONTRACT for WORKSHOPS at LANCASTER.—Persons desirous of TENDERING for the whole or any portion of the BUILDINGS required in erecting the new Works for the Lancaster Wagon Company, Limited (to cover about 12 acres) adjoining the Midland Railway, township of Bulk, near Lancaster, can see the plans and specifications, and obtain bills of quantities at my Office, Castle Hill, Lancaster, from TUESDAY, the 15th MARCH, to TUESDAY, the 22nd, inclusive. Tenders addressed to me to be sent in on or before SATURDAY, the 26th MARCH. The Directors do not bind themselves to accept the lowest or any Tender.

EDWARD C. G. PALEY, Architect.

Lancaster, March 1st, 1864.

TO BUILDERS.—Persons desirous of TENDERING for the ERECTION of a HOUSE and Premises, on ground to let/sale in Palmerston-road, Southsea, for Mr. T. C. HAYDON, can inspect the plans and specification on and after MONDAY, the 7th instant, at the Office of Mr. MONKHOUSE, Gordon-terrace, Southsea; or at the Office of the Architect, Mr. JOSEPH CLEVER, 7, Osborne-street, London, to whom all parties wishing to Tender are requested to forward their names, when they will be supplied with a copy of the quantities as soon as prepared. Tenders to be delivered to Mr. T. C. HAYDON, Queen-street, Portsea, endorsed, "Tender for House and Premises, Palmerston-road, Southsea," on or before THURSDAY, the 17th instant. The lowest or any Tender will not necessarily be accepted.

TO BUILDERS, &c.—Persons desirous of CONTRACTING for the ERECTION of the RECTORY HOUSE at Staple, near Wingham, Canterbury, Kent, can apply by letter only, for further particulars, to the Architect, Mr. HARRY E. NEWTON, 6, Argyle-street, Regent street, London, W.

[For remainder of Contracts see next Page.

CONTRACTS.

SAINT JOHN, HAMPSTEAD. — CONTRACT for ROAD WATERING.—The Vestry of the Parish of St. John, Hampstead, invite fair tenders for the supply of the requisite WATER CARTS and HORSES for WATERING the Roads, Streets, and PLACES contained in the Abbey-road district, for one year, and after the letting of which year, the present Contract, called the London-road, commencing at the top of Rosslyn-street, and the old gate-house known as the Red Lion and terminating at a boundary-stone between the Counties of Middlesex and Herts, at the Finchley and Edgware Road or Hat and Feathers Tavern, both in the Edgware and Kilburn districts of this parish, at the expiration of which year, the Vestry of the said Parish intend to let the Contract for the London-road to the best bidder, and the present Contractor for the London-road, from the last day of MARCH next to the first day of SEPTEMBER next, Printed forms of Tender and Specifications, with further particulars of contract, may be seen, and further particulars obtained, at the Office of the Surveyor to the Vestry, No. 1, New End, Hampstead, any day before the meeting, between the hours of Ten and Four. The Vestry reserve to themselves power to except the lowest or any Tender. The contractor will be required to execute a written contract, and to enter into a bond with sufficient sureties in the sum of £500, for the due performance of the contract. Note—Intending tenderers are requested to attend at the Vestry Meeting, on Friday, the 11th day of March next, at half past SEVEN o'clock in the evening, precisely, when TENDERS for the SUPPLY of HORSES, WATER CARTS, and DRIVING of WATERING Horses, RIVETING and PLACING

CONTRACTS.

TO BUILDERS and CONTRACTORS.—Persons desirous of TENDERING for PARTLY TAKING DOWN, REBUILDING, and ENLARGING the FARM-HOUSE, on the farm of Mr. John Teesdale, in Holbeach Marsh, can inspect the drawings and specification, on and after MONDAY, the 7th, until WEDNESDAY, the 16th of this instant, MARCH (Sunday excepted), at the Chequers Inn, Holbeach, at which place sealed Tenders are to be delivered on the latter day, not later than TWO o'clock p.m. addressed Mr. JOHN TEESDALE, Holbeach Marsh, endorsed "Tender for Works."—Mr. Teesdale does not bind himself to accept the lowest or any Tender.—Holbeach, March 1, 1864.

GAS WORKS. — CITY of BRISTOL WORKHOUSE, STAPLETON.—The Guardians of the Poor of the City of Bristol give notice, that all persons who may desire to CONTRACT for the ERECTION of GAS WORKS for the above WORKHOUSE, are requested to send to the said Guardians on or before WEDNESDAY, the 30th MARCH, 1864, Plans, Specifications, and Tenders for the same. Each Tender must be in the undermentioned printed form, and must be sent in a sealed paper, endorsed "Tender for Gas Works." The Tenders will be opened at the meeting of the Guardians, on the 1st of APRIL, 1864. The Guardians do not pledge themselves to accept the lowest or any Tender, but in the event of any Tender being accepted, the parties making the same will be required immediately to execute a Contract for its due fulfilment. The Conditions of the Contract may be seen, and printed forms of Tender may be obtained, and the Workhouse and premises viewed on application to the undersigned, who will also furnish any other information required. No premium or gratuity will be given for the plans or specifications, but those belonging to the unsuccessful candidates will be returned unused.—By order of the Board of Guardians,

W. B. WILMOT, Clerk

[Address, St. Peter's Hospital, Bristol.]

26th February, 1864.

TO ROAD CONTRACTORS. — Parish of ST. GILES, CAMBERWELL, SURREY.—The General Purposes Committee will meet on MONDAY, the 14th day of MARCH, 1864, at half-past SIX o'clock precisely, to receive TENDERS for the REPAIRS of Two ROADS in this parish, directed to be executed by this Vestry, the particulars of which can be seen, at the Office of the Surveyor, Mr. J. C. REYNOLDS, Office of Works, Wells-street, Camberwell, on and after TUESDAY next, the 8th instant, between the hours of ELEVEN and THREE o'clock.

GEO. WM. MARSDEN, Vestry Clerk.

Vestry-hall, Camberwell, 2nd March, 1864.

NEW FERRY PIER, opposite Liverpool. TENDERS are REQUIRED for ERECTING a PIER and FLOATING STAGE of wrought and cast Iron, &c. Drawings, specification, and quantities can be seen at the Office of Mr. BRUNLEES, C.E. 5, Victoria-street, Westminster; and at the Office of the Mersey River Steam-boat Company (Limited), Lancaster-buildings, 9, Tithebarn street, Liverpool, on and after the 2nd day of MARCH next.—Tenders are to be sent in, addressed to ROBERT LAMONT, Esq. at the Company's Offices, not later than the 12th day of MARCH. The Company do not bind themselves to accept the lowest Tender.—By order,

ROBERT LAMONT, Secretary and Manager.

Liverpool, Feb. 26, 1864.

NORWICH CORPORATION. TONNAGE DUES.—The Tonnage Committee of the Norwich Corporation, will meet at the Guildhall, on THURSDAY, the 17th of MARCH, 1864, to receive sealed TENDERS for the Hire for the term of Three Years from the 24th of March next, of the DUES or DUTIES, payable under an Act passed in the 12th year of the Reign of the First, called the Tonnage Act, together with the Tonnage Master's Dwelling-House and Office adjoining the River, and near to Carrow Bridge, in the said city. The hirer is to find sureties for the payment of the rent in advance, and for the performance and observance of covenants and regulations, to be entered into by the lessee. Tenders are to be received at my Office, Guildhall, up to ELEVEN o'clock, a.m. of the 17th of MARCH next. The Committee are not bound themselves to accept the highest or any Tender. By order,

W. L. MENDHAM, Town Clerk.

Guildhall, Norwich, 24th February, 1864.

TO BUILDERS.—WANTED, a TENDER for OAK FENCING round a Factory and Grounds.—Apply, by letter, to RALPHS, BROS. Steel Works, Hoyland

WEST HAM LOCAL BOARD of HEALTH.—Notice is hereby given, that the Local Board of Health for the district of West Ham, in the county of Essex, are prepared to receive TENDERS for MAKING, LEVELLING, CHANNELLING, and CURBING Marcus street, Plaistow-grove, West Ham, and adjoining streets. Conditions of Contract, forms of Tender, and any other information, may be obtained at the Office of the Local Surveyor at Rokeby House, Stratford. Tenders are to be received at my Office, at Rokeby House, Stratford, not later than MONDAY, the 21st inst. and each of them must contain a 10l. Bank of England note, endorsed by the party tendering, to be returned in the event of either of the Tenders not being accepted, or on the completion of the contract or bond

CHARLES WILSON, Clerk to the Local Board.

Rokeby House, Stratford, March 3 1864

DUNMOW UNION. — To BUILDERS and OTHERS. CONTRACT for ADDITIONS to the UNION WORKHOUSE. Notice is hereby given, that the Guardians of the above Union are desirous of receiving TENDERS for the ERECTION of a BAKEHOUSE, FLOUR-STORE, and BREAD-ROOM, at the Union Workhouse, Great Dunmow, according to the plans and specification thereof, now lying at the Office of Mr. BRAY, Architect, Chelmsford, Essex, where they may be inspected. Sealed Tenders, addressed to the Guardians, to be sent to the Workhouse before TUESDAY, the 15th MARCH next, at which time the same will be opened. The person whose Tender is accepted will be required to enter into such a contract (with or without sureties) for the due execution of the works as the Guardians may determine. The Guardians do not bind themselves to accept the lowest or any other Tender.—By order of the Board,

WILLIAM JOHNSON, Clerk.

Dunmow, February 23, 1864.

TO BUILDERS.—Builders who are desirous of CONTRACTING for the ERECTION of a SCHOOL HOUSE, Pontypool, Monmouthshire, for the Rev. Elezar Torregiani, can see the drawing and specifications at the Residence of the Rev. Elezar Torregiani, Pontypool, Monmouthshire. Sealed Tenders are to be sent to the Architect, Mr. ARTHUR EVANS, 29, Henrietta-street, London, W.C. not later than the 23rd of MARCH next. The lowest or any Tender will not necessarily be accepted.

MORTAR GRINDING MILL WANTED to PURCHASE, a good New or Second-hand MORTAR GRINDING MILL, to work by steam power. Pan to be not less than five feet and under, and the rollers about three feet and a-half, and eleven inches wide.—State lowest cash price and full particulars, to J. & F. SANDERS, Leicester.

IRON BRIDGE for SALE. —At Plymouth, a WROUGHT-IRON BRIDGE, 125 feet long, rail 6 feet high, roadway 18 feet wide, constructed by C. D. PENNELL & CO. from designs by the late Mr. Brunel. In its first-rate condition, strong, capable of carrying 50 tons. TO BE SOLD, a bargain.—Apply to the DOCK MASTER, Plymouth, Great Western Docks, Plymouth.

IRON DOORS. — WANTED, SECOND-HAND WROUGHT-IRON DOORS and FRAMES, suitable for fixing in party-walls; size required, about 7 feet by 3 feet.—Particulars and price to be sent to C. D. at Mr. James Gilbert's, 19, Grace-church-street, E.C.

TO ARCHITECTS AND BUILDERS, RAILWAY CONTRACTORS, &c.

MANUFACTURER OF WROUGHT-IRON GIRDERS

THE PRIZE MEDALS,
LONDON, 1851. PARIS, 1855. LONDON, 1862.
AWARDED TO
COTTAM & COMPANY,
No. 2, WINSLEY-STREET, LONDON, W.
FOR PROGRESSIVE AND GENERAL IMPROVEMENTS IN
STABLE FITTINGS AND HARNESS BRACKETS.
PATENTEES AND ORIGINAL INVENTORS OF
THE IMPROVED SYSTEM OF STABLE AND HARNESS FITTINGS,
PATRONISED BY THE ENGLISH AND FRENCH GOVERNMENTS, AS WELL AS BY THE PRINCIPAL NOBILITY, GENTRY, AND HUNTING ESTABLISHMENTS IN THE KINGDOM.

SECURITY FROM ACCIDENT by the use of the Patent Halter Guide and Improved Curved Top-plate; PROMOTION of HEALTH, COMFORT, and CONDITION, by the cleanliness and power of resisting infection of the Mangers and Troughs; and also of the Patent Drop Cover, to curtail the quantity of water to be imbibed. ECONOMY in the USE of FOOD, from the improved formation of the Fittings, and by means of the Patent Portable Seed-box, are some of the peculiar recommendations of Cottam's Patent Composited, Enamelled, and Galvanized Iron Fittings for Stalls and Loose Boxes.

COTTAM'S PATENT COMBINED SADDLE and HARNESS BRACKETS; IMPROVED SURFACE GUTTER, WITH MOVEABLE SAFETY COVERS; Sanitary Traps, Cheap and Durable Corn-bins, and every Article requisite for the Stable and Harness-room.

IRON GATES, FENCING, and HURDLES MADE by MACHINERY.

COTTAM'S newly-invented REGISTERED NOISELESS MANGER SHACKLE and GUIDE FOR HALTER-STRAP, and IMPROVED VENTILATING HARNESS BRACKETS, are only to be obtained from the Inventors, and can be seen in use at their Manufactory.

COTTAM & CO. exhibit for inspection, at their Iron Works, 2, Winsley-street, W., an extensive range of full-sized Stalls, Loose Boxes, and Harness Rooms, the most complete that can be imagined.

ILLUSTRATED CATALOGUES and LITHOGRAPHS free, on application to COTTAM and CO. 2, WINSLEY STREET, Oxford-street, London, W.

COTTAM & CO.'S only address in London, is 2, WINSLEY STREET, W.

N.B. WINSLEY STREET IS THE STREET OPPOSITE THE PANTHEON.

ST. PANCRAS IRON WORK COMPANY,

OLD SAINT PANCRAS ROAD, LONDON, N.W.

APPROVAL OF THE ROYAL VETERINARY COLLEGE.

THE MEDALS OF ENGLAND AND FRANCE,

And the Medals and High Recommendation of the Royal Agricultural Societies of England and Ireland.

SECURED BY EIGHT SEPARATE PATENTS. LATEST, 1863.

PATENT WROUGHT-IRON STABLE FITTINGS

SHOULD BE ADOPTED FOR THE FOLLOWING REASONS, viz.:—

That the BREAKAGES in Cast-Iron Fittings are numerous, and that one fracture from a kick or other cause, may occasion an injury to a Horse, and involve a loss equal to the entire expense of fitting up the Stable. The fear of this has led to the use of wood, and, in the case of Cast-Iron GUTTERS, to the adoption of another and less effective mode of draining.

PATENT ENAMELLED TOP PLATE MANGER, with RACK & WATER-TROUGH,

The whole of which, except the Rack, being enamelled, can be kept as clean as a DINNER PLATE.

THE HALTER BALL, ATTACHED BY A NEW IMPROVEMENT, WORKS NOISELESSLY, AND ALMOST WITHOUT FRICTION.

PATENT FASTENINGS FOR THE DOORS OF LOOSE BOXES.

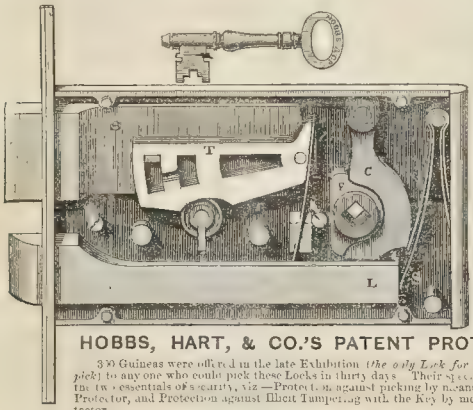
These Catches and Hangings work easily, are self-acting, and cannot be put out of order: by their use all projections by which horses are often blemished are rendered impossible,—advantages peculiarly their own.

THE PATENT HARNESS FITTINGS

Keep the Harness and Saddles in shape, and are constructed so as to admit the air getting to the underside of them when hung up, thereby insuring a quick and perfect airing from any wet or moisture.

EVERY DESCRIPTION OF STABLE FURNITURE.

ILLUSTRATED LISTS ON APPLICATION.——INSPECTION OF SHOW-ROOM REQUESTED.



ST. PANCRAS IRON WORK COMPANY,

OLD SAINT PANCRAS ROAD, LONDON, N.W.

HOBBS, HART, & CO.'S

MACHINE-MADE LOCKS AND STREET-DOOR LATCHES.

These Locks are recommended for all purposes requiring good security combined with economy of price and durability of wear, as by means of machinery a faultless accuracy is arrived at, which by hand labour would be impossible except at a greatly increased cost.

Architects and Engineers are requested to notice that the security of these Locks consists in a series of Levers, that have to be raised to unequal positions by the bits of the key before the bolt can pass. These will bear comparison with those at treble their cost.

These Locks are made with from Two to Five Levers, and can also be made in suits to differ with Master Keys to pass.

The retail prices of Locks for Cabinet purposes are from 2s. to 4s. each; for Room Doors, 4s. to 9s. 6d. each; Street Door Latches, 7s. 6d. to 18s. each.

This Illustration represents the Two-bolt Four-lever Mortise, with Hobbs & Co.'s Patent Follower, price 8s.

HOBBS, HART, & CO.'S PATENT PROTECTOR LOCKS.

300 Guineas were offered in the late Exhibition *(the only Lock for which a Premium was offered to pick)* to any one who could pick these Locks in thirty days. Their speciality consists in their combining the two essentials of security, viz.—Protection against picking by means of their Patent Moveable Lever Protector, and Protection against Illicit Tampering with the Key by means of their Patent Nozzle Protector.

These all-important principles are the special and peculiar features of HOBBS, HART, & CO.'S Patent Locks. These Locks vary in price from 10s. to 50s. each, with Solid Keys. For prices, with Changeable Keys, see 16-paged Illustrated List of Locks, Iron Doors, Safes, &c., which can be had on application.

HOBBS, HART, & CO. 76, CHEAPSIDE, LONDON, E.C.

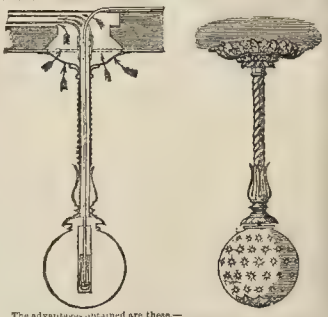
GALVANIZED IRON AND ZINC WORKS.

GALVANIZED OR BLACK SHEET-IRON, CORRUGATED AND PLAIN, ALWAYS ON STOCK.

GAS AND WATER TUBING, GUTTERING AND PIPING, WIRE NETTING, TELEGRAPH AND FENCING WIRE.

EVERY DESCRIPTION OF IRON WORK GALVANIZED.

ESTIMATES GIVEN FOR IRON ROOFS, SHEDS, STORES, &c.



VAVASSEUR & CO.

GALVANIZED IRON AND ZINC WORKS, SUMNER STREET, SOUTHWARK, S.E.

RICKET'S & HAMMOND'S

VENTILATING GLOBE LIGHT,

combining an agreeable method of lighting, with convenient simple, and efficient ventilation

The advantages obtained are these,—

A TOTAL REMOVAL OF ALL PRODUCTS OF COMBUSTION

A COMPLETE DISPLACEMENT OF HEATED AND VITIATED AIR,

AND A CONSIDERABLE ECONOMY IN THE CONSUMPTION OF GAS.

A GLOBE LIGHT will consume 5 to 7 feet of gas per hour, giving as much light as an ordinary three-light chandelier, with a consumption of 12 feet per hour.

No 5, CHANDOS STREET, CHARING CROSS, LONDON, W.C.

NAILS and IRONMONGERY

SPECIAL DESIGNS PREPARED in perfect ACCORDANCE WITH Architectural Arrangements. Estimates furnished FOR THE LIGHTING and Fitting up of Theatres, Music-halls, and Public or Private Buildings with Gas, &c.

The usual trade discount allowed, as at their

MANUFACTORY and CITY SHOW ROOMS, 147, HOUNDSDITCH, CITY.

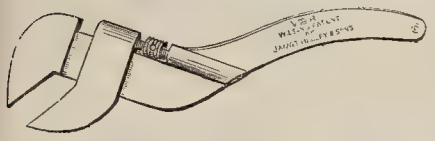
THE DENNETT ARCH.

Allowed to be the cheapest fireproof construction known, and used with the greatest success for the last ten years in the Midland Counties, and has been adopted by G. G. Scott, esq. for the New Foreign Offices, used in any form of arch, groin or dome; turned to any length, width, or height, forming a perfect floor and ceiling in one mass, from 2½ inches in the crown to any required thickness.

Address to the Patentees,—A. & R. DENNETT & CO. NOTTINGHAM.

TESTIMONIAL.—"I have made use of Messrs. Dennett & Co.'s material for Fireproof Arching, and though I have, happily, had no practical experience of its efficiency as against fire, I can bear witness to its strength, and its extreme convenience of application. I have made use of it in positions in which I should have found it difficult to introduce any other fireproof material, and it has this advantage, that the arches constructed of it are so entirely in one mass that they cover the space like a compact shell or inverted basin, and are, consequently, almost wholly free from lateral pressure.

"GEO. GILBERT Spring Gardens London."



BY HER MAJESTY'S ROYAL LETTERS PATENT.

WILSON'S DOUBLE-ACTION SCREW SPANNER,

MANUFACTURED BY

JAMES HEELEY & SONS,

Mount-street, Birmingham.

The superiority of this Spanner consists in its novel and rapid mode of adjustment by a double action screw, and its new and convenient arrangement of curved handle and oblique jaws, which, combined with its superior strength and excellent workmanship, render it by far the best and handiest tool of its class hitherto produced. It is being extensively used by Engineers, Manufacturers, Machinists, and Railway and Steamboat Companies, and can be had of all respectable Ironmongers.

SIMPLICITY, UTILITY, ECONOMY, AND DURABILITY.

THOMAS PUGH & CO.'S NEW PATENT ECONOMIC SELF-ADJUSTING MORTISE AND RIM LOCK FURNITURE.

J. B. SCAMMELL & CO. (late Thomas Pugh & Co.)

WHOLESALE IRONMONGERS,

13, KING STREET, SNOW HILL, LONDON.

NUT PLATE.

We invite particular attention to the PATENT LOCK FURNITURE, which we do not hesitate to say is the most perfect article now manufactured, great improvements having been recently made in it. It has been extensively used in Public and Private Buildings, in Her Majesty's Pavilion and Camp at Aldershott—alone, many hundred sets without one single failure. It is applicable to all Locks and Latches, both Rim and Mortise, and effects a most secure fastening, without any screw in the neck of the knob. Perfect action guaranteed in both Locks and Furniture, if the Locks are of our own manufacture.

New rich Designs in Glass, China, Brass, Bronzed, Gilt, Carved Woods, Inlaid, &c. &c. or to any Design.

THIS FURNITURE MAY BE HAD WITH PLATES OR NUTS.

A most complete and extensive stock of every description of Locks, Latches, Brass Foundry, and Ironmongery, required for Buildings, of the best quality manufactured, at the lowest wholesale prices.

*** Illustrations and Particulars sent on application.

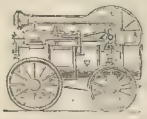
PORTABLE STEAM-ENGINES FOR HIRE OR SALE.
R. RICHARDS & CO. Upper Ground Street, Blackfriars Road.

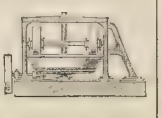
THE LONDON
WARMING AND VENTILATING COMPANY,
LIMITED,
26, GREAT GEORGE-STREET, Westminster, S.W.
MANAGER, MR. WOODCOCK.

Churches, Greenhouses, Offices, and Buildings of every description warmed by means of a modification of the plans successfully used during the last five years by Mr. Goldsworthy Gurney in both Houses of Parliament.

Steam, Hot Water, Gas, and in open or enclosed fire-places, Coal and Coke, are equally available for the process.



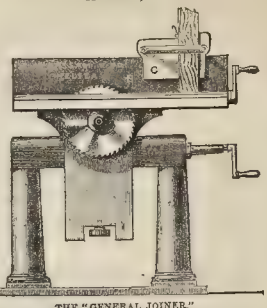
The cost is less and the effect greater than that of any other known Plans.



The Horticulturalist will find herein an instrument of new and important powers.

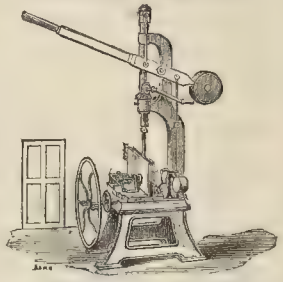
The Apparatus may be seen in operation in ST. PAUL'S CATHEDRAL, the various offices of the "Department of Science and Art," and at the Architectural Societies' House, 9, Conduit street, Regent-street

Particulars and testimonials forwarded on application.



HENRY SYKES,
67, UPPER THAMES STREET, LONDON
(In connexion with RUSTON, PROCTOR, & Co.),
Has on hand several ENGINES and MORTAR MILLS for SALE or HIRE.

Contractor for Pumping, Sawing, Mortar Grinding, and other work where Steam Power is required.
A 30-cwt., 2-ton, and 3-ton Steam Crane ready for delivery.



TO BUILDERS, JOINERS, CONTRACTORS, &c.

THE "GENERAL JOINER."

SAMUEL WORSSAM & CO. having long felt the importance of introducing a LABOUR-SAVING MACHINE, which by combining several operations at a moderate cost, should meet the requirements of builders and others engaged in the conversion of timber, beg to offer for this purpose their "General Joiner" as above, which in its present greatly improved form will, with 2-horse power, do the work of at least fifteen skilled joiners, in SAWING, CROSS-CUTTING, and SQUARING, PLANING, and THICKNESSING, MORTISING, TENONING, GROOVING, TONGUEING, RABBETTING, BORING, BEADING, MOULDING, CHAMFERING, &c. &c. For priced illustrated circulars, apply to S. WORSSAM & CO. Saw-Mill Engineers, King's-road, Chelsea (sole manufacturers), where the "General Joiner," and samples of the work may be seen.

DEANE & CO. (THE MONUMENT), LONDON BRIDGE.
ESTABLISHED A.D. 1700.—ILLUSTRATED CATALOGUES POST FREE.

FIRE-PROOF CONSTRUCTION.—

FOX & BARRETT'S PATENT.

This Improved system of fire proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY with great superiority of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of rolled wrought or rolled iron with concrete, so constructed that each floor becomes in effect a beam of artificial stone with ribs of iron; the structure possessing great strength and rigidity, and forming a fire proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the Patent,
MR. BARRETT,
19, YORK BUILDINGS, ADELPHI

CHUBB'S LOCKS,

with all the recent Improvements,
STRONG FIRE-PROOF SAFES, CASH AND DEED BOXES.

AUSTIN'S IMPERIAL PATENT SASH

and BLIND LINES.
To BUILDERS, CARPENTERS, and BLIND MAKERS.
J. AUSTIN, Manufacturer of the above articles, particularly wishes to direct the attention of the Trade to his

IMPERIAL PATENT FLAX SASH-LINES,

of which he is now making four qualities, and he strongly recommends that in all cases they should be purchased in preference to the PATENT LINES made from Jute, which article has neither the STRENGTH nor DURABILITY of Flax, consequently cannot give so much satisfaction to the consumer.
They can be obtained of all Ropemakers, Ironmongers, Merchants, Factors, and Wholesale Houses, in Town and Country.

WINDOW-BLIND MATERIALS.

H. & J. DOVE, 31, Ludgate-hill, London, E.C. Supply the Trade with every description of MATERIAL for inside and outside Window-Blinds; comprising Sun-blind Ticks; Linen Hollands; Buff, Green, and White Unions; Green, Crimson, and Blue Tammies; Fancy Printed Blinds, Cords, Tassels, &c.; also Webs and Lines for Venetian Blinds.—Samples and Price Lists sent on application.

PATENT SASH-LINES.

H. & J. DOVE, 31, Ludgate-hill, London, E.C. beg to call the attention of Builders and the Trade generally to their low Price List for every quality of SASH LINES, which will be sent on application, or a Sample Order will receive immediate attention. In all cases where the parties are not known, a reference in London is indispensable.—Established A.D. 1797.

DAVID JONES, Bridge Ironworks, and

HERBERT'S Park Ironworks, Bilston, Staffordshire, Manufacturer, under license of the Patentee of MALLET'S PATENT BUCKLED IRON PLATES, for flooring, for railway and other bridges, viaducts, wharfs, &c. and for lining, and other parts of fire-proof buildings, and various important structural uses. These plates form the lightest, strongest, most rigid, and durable flooring known. They were pronounced by the late Mr. Brunel, "the best bridge-flooring extant." They have been adopted at the new bridge, Westminster, on the Indian railways, and in many other first-class structures, by Messrs. Page, Hawkshaw, Rendell, Stephenson, and other engineers, and for fire-proof buildings by Government, the War Office, Metropolitan Board of Works, and other important uses. Specimens of the buckled Plates can be seen at Bull Wharf, Upper Thames-street, London.—Applications for lithograph circulars, prices, and other information, as to supply of the plates, to be made to the Manufacturer, as above; or to ROBERT MALLET, Esq. C.E. the Patentee, 11, Bridge-street, Westminster.
N.B.—Manufacturer of Boiler Plates, Bridge and Ship Plates; also Sheet Iron of all kinds, and Rivet Iron of first quality.
Address, BRIDGE IRON WORKS, Bilston, Staffordshire.

DESACHY'S FIBROUS PLASTER,

Beg to call the attention of Architects to its Capabilities.

It is adapted for the speedy and economical production of any coffered or circular work, waggon-headed ceilings (all bracketing being avoided, as it is fixed to the joists direct), fluted and plain columns, panelled dados, all kinds of diaper, &c.; for the linings of walls and ceilings, and for all purposes of ornamental plaster.

The advantages are great. It is of great lightness and of excellent quality; it is not inflammable, and is ready to be painted immediately after it is made; it has been used (under the direction of Owen Jones, esq.) for the ceiling of St. James's Hall; at Messrs. Osler's, Oxford-street; Mr. Hancock's, New Bond-street; the Crystal Palace Bazaar; the Home for the Aged, South Lambeth; and at various other Works.

SPECIMENS CAN BE SEEN AT 49, RATHBONE PLACE.

DESIGNS MADE FOR ANY WORKS.

LITHOGRAPHED DESIGNS OF CEILING FLOWERS, &c. SENT FREE ON APPLICATION.

CARTON PIERRE AND PAPIER MACHE WORKS, 49, RATHBONE PLACE, LONDON, W.

(ESTABLISHED IN 1780.)

FIRST-CLASS MEDAL,
EXPOSITION UNIVERSELLE,
1855.

PRIZE MEDAL—Class X. (c)
INTERNATIONAL EXHIBITION
1862.

1862.
INTERNATIONAL EXHIBITION.

HONOURABLE MENTION
FOR SUPERIOR DESIGN AND WORKMANSHIP.

WILLIAM WHITE,

49 & 50, GREAT MARYLEBONE STREET, LONDON, W.

Invites Inspection of his extensive Stock of Enrichments in

PAPIER MACHE,

COMPOSITION, AND CARTON PIERRE.

ARCHITECTS' DESIGNS MODELLED WITHOUT CHARGE.

SPECIAL DESIGNS
FOR THE
DECORATION OF
PUBLIC AND PRIVATE
BUILDINGS
SUPPLIED WITHOUT CHARGE.

BATH STONE OF BEST QUALITY.

RANDELL & SAUNDERS, Quarrymen and Stone Merchants, Bath.

List of Prices at the Quarries and Depôts, also Cost for Transit to any part of the United Kingdom, furnished on application to BATH STONE OFFICE, CORSHAM, WILTS.

BATH STONE OF THE BEST QUALITY.

PICTOR & SONS, Quarry Proprietors and Stone Merchants, Bath.

Lists of Prices at the Quarries and Depôts, also Cost of Transit to all parts of the Kingdom, forwarded on application to BATH FREESTONE WORKS, BOX, NEAR CHIPPENHAM, WILTS.

ARCHITECTS, BUILDERS, MERCHANTS, SHIPPERS, AND MASONS

Will find that the CHEAPEST HOUSE in LONDON for the following Goods is at the

EMPORIUM, J. W. BIRD & CO.'s, 143½ and 145, EUSTON ROAD, N.W.

BOX STONE CHIMNEY PIECES
for 5s. 6d.
Truss ditto ditto, 11s. 9d.

MONUMENTS AND TABLETS
in great variety, equally low in price.

MASONS' WORK OF ALL KINDS
CONTRACTED FOR,
AND EXECUTED WITH DESPATCH IN TOWN OR COUNTRY.

A STOCK OF
500 CHIMNEY PIECES
always to choose from.
Price List on Application.

MARBLE BOX CHIMNEY PIECE
for £1 5s.
First-class Bed-room ditto, £1 10s.

FIRST-CLASS
TRUSS MARBLE CHIMNEY PIECES
from £2 5s. to £3 5s.

A WELL-CARVED
STATUARY CHIMNEY PIECE,
with 13½-inch Piers,
suitable for a Drawing-room, which must be seen to be believed,
FOR THE SUM OF £6.
Net Prompt Cash.
Price List on Application.

STATUARY AND OTHER MARBLE CHIMNEYPIECES.

ARCHITECTS, BUILDERS, and MASONS will find at
W. WILLETT'S SHOW-ROOMS, MARYLEBONE ROAD, N.W.
OPPOSITE THE YORKSHIRE STINGO,
A LARGE ASSORTMENT of STATUARY & COLOURED MARBLES, also ENAMELLED SLATE, and STONE CHIMNEYPIECES, at Prices to command their Orders.
CARVED TRUSS STATUARY MARBLE CHIMNEYPIECE, FROM £6. AND UPWARDS.

TO BUILDERS.
STONE! MARBLE! STONE!
THE CHEAPEST HOUSE IN LONDON FOR MARBLE AND STONE CHIMNEY PIECES.
MESSRS. BRINE & CO.
135, EUSTON ROAD, ST. PANCRAS.

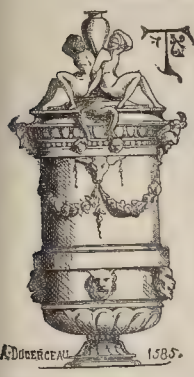
Box Stone Chimney Pieces.....from 6s. to 9s.
Marble ditto ..... 28s. to 32s.
Truss Marble Chimney Pieces .....from 50s. to 70s.
Truss Stone ditto ..... 12s. to 18s.
Sheet of Designs sent free on application. Estimates for every description of Masonry.

IMPORTANT TO ARCHITECTS, ENGINEERS, BUILDERS, RAILWAY, AND OTHER COMPANIES.
VIEILLE MONTAGNE ROOFING ZINC.
Company's General Agency, 12, Manchester Buildings, Westminster.

Zinc properly laid has been proved by most extensive and long experience in France, Belgium, and Germany to be a most secure, durable, and economical covering, and is now preferred to all other materials for roofs. Its extreme lightness makes it most valuable for covering buildings requiring large spans with comparatively light framing. On a rough calculation it may be estimated that not less than 41,000,000 square feet is the average quantity of Roofing surface now annually covered in the above countries alone. Within the last few years persevering efforts have been made to introduce into England proper workmanship, in accordance with the principles which are observed on the Continent, and which alone can secure the sound and perfect construction of a Zinc roof. To aid in extending as much as possible the knowledge of these simple rules, models showing all the details are to be seen in the Architectural Exhibition in Conduit-street, and the following, selected out of a very great number of recently constructed roofs, are referred to as examples:—The Patent Granary, West-India Docks; Copenhagen Works, Limehouse; a private house in Holland Park; Homes for Poor Merchants' Clerks, Muswell-hill; a large Warehouse, 77, Thames-street; Ship roof, Sheerness Dockyard; the Victoria Station, Pimlico; the Stations in the Metropolitan Railway; the Stations of the Madras Railway Company (400,000 feet); the Warehouse of Messrs. Oakes, Brothers, & Co. Madras (20,000 feet); the Refreshment Rooms at the Exhibition; the Verandah of the Horticultural Society's Conservatory; Gloucester Railway Station; Messrs. Horniman & Co.'s Tea Warehouse, Wormwood-street; Messrs. Hoare & Co.'s Brewery, Smithfield; Cape Town and Wellington Railway (60,000 feet); Fifty new Dwelling Houses at Palace Gardens-terrace, Kensington; Twenty ditto, Inverness-terrace, Bayswater.

Plans, Estimates, and all useful information will be furnished, without charge, by applying to either of the Directing Architects.
JAMES EDMESTON, 5, Crown-court, Old Broad-street.
R. G. FISHER, 12, Manchester-buildings, Westminster.

N.B. No covering can be more economical, durable, and secure than Zinc when well laid, but good Zinc badly laid will spoil the roof, and, with a view still further to encourage good work, a special Discount will be allowed to all persons upon the Zinc used in roofs, when certified by either of the above Architects to be properly laid.



JAMES W. TYLER, CONTRACTOR FOR
DEVAUX'S VIEILLE MONTAGNE THICK ZINC ROOFING,
ON IMPROVED PRINCIPLES.
12, ABINGDON STREET, and 4, WOOD STREET, WESTMINSTER, close to Victoria Tower.

Estimates furnished for every description of Zinc Roofing and Guttering, in lieu of ex isting Leather or Iron Flashing, in all parts of England.
Having for several years been actively employed in laying DEVAUX'S THICK ROOFING ZINC (the purest extant), upon the new principles introduced by Mr. Edmeston, Mr. TYLER can refer with confidence to work done as his best reference in addition.
Good Zinc badly laid will fail in a few years, for there is much more importance in the mode of laying than is yet generally known; and parties who will intrust their work to Mr. TYLER will find that this important point is thoroughly attended to, and at no extra cost.
This Zinc thus laid is quite as lasting as lead, if the wood-work is arranged according to Mr. TYLER'S directions.

The Builder.

VOL. XXII.—No. 1100.

The Railway Schemes; and Metropolitan Communications.

THE joint committee of the Lords and Commons appointed "to consider the best method of dealing with the railway schemes proposed to be sanctioned within the limits of the metropolis by Bills to be introduced in the present session, and to report their opinion whether any, and, if any, what schemes should not be proceeded with during the present session," have concluded their labours; and the result testifies to the pertinence of observations made in the House of Commons and out of it, at the time when the committee was moved for, that the terms of the reference were not comprehensive of the whole subject, and might be considered on that account "objectionable." Notwithstanding Mr. Milner Gibson's opinion, which he expressed in reply to Mr. Crawford, Mr. Massey, Sir J. Shelley, Lord Enfield, and Lord Fermoy, that the reference was sufficiently explicit, and would admit of the consideration of questions of new and widened streets, it is clear that the implication, in the terms of the reference, that railways were the sole or chief remedy for existing inconveniences, and a certain pressure felt by the committee, under the circumstance that numerous schemes on which money had been paid, were kept waiting, have contributed to the expression of a hasty judgment, and to a further staving-off of what will be necessary at last, namely, a comprehensive *plan* of the area occupied by London, with the largest estimated additions for the next century, designed and arranged for drainage and sewerage, water-supply, intercommunication, and whatever may be essentials in a city of immense population.

In the contrivance of the plan referred to, or even limiting the view to the existing area of the metropolis,—and without taking into account the suburbs,—means of communication more rapid than those of the present streets and carriages, are at once seen to be necessary. The Metropolitan Railway has proved that amongst the appliances which may be brought into use, is the system of road and motive power combining the rail and the locomotive engine. But, that is nearly all that experience of the circumstances of London has permitted to be established. The principles generally of planning the area of London; the spots which should be regarded as centres existing, and the directions that routes should take; the *degree* in which railways should trench upon open spaces, and upon those routes of the nature of streets which must always be required; and the several kinds of traffic to be provided for by the railways, as well as the species of engine and train best adapted to each kind, have never yet been considered, as they should and might be by an architect or engineer, or by a commission well constituted and advised. Even Wren and Gwynn, from whom much yet might be learned, considered in their plans, each, not the whole of the London of his time, and could hardly have foreseen the growth of a town-district which seems likely to extend to Staines or Windsor, or the necessity for, and invention of, the appliances which now exist, for connecting quarters so far apart as those of the east and the west of the actual or the future London. But to deliver over the metropolis of an empire, and home of at present nearly three millions of people, to the chances of its present agglomeration, on the assertion gravely made by some engineers, that it is impossible to foresee future requirements, as of railways,—but that circumstances must be met as they arise,—and allowing possibility for public good to be sacrificed to private ends, as those of speculators,—seems to us neither to be what should be regarded complacently, nor to be in the slightest degree necessary.

The difficulty of certain engineers is caused by their aiming at central stations, crowding at one spot railway and street-traffic, instead of adopting a principle of feeders to, and distributors from, the main line, with many though smaller termini,—the feeding and distributing lines, with their carriages and engines, being perhaps on a smaller scale than in the case of the main lines, as recommended several times by Mr. Sharpe, of Lancaster, and others. On this matter, it may be well to quote Mr. Hawkshaw, whose extension of the South-Eastern line to a station at Charing Cross, might seem to be not in accordant principle with the expression of his opinion, as given in the Minutes of Evidence attached to the Third Report from the Select Committee of the House of Lords on Metropolitan Railway Communication, dated 16th July, 1863. Mr. Hawkshaw then was asked whether he was "quite opposed to having a central station for a great many railways in the heart of the metropolis." He replied:—

"Yes; the fact is, that a central station is quite an impossibility. From my experience I know that railway stations in numerous instances have had in twenty years to be trebled, and even quadrupled, in size. Wherever stations are made, it is proper to assume that in the course of time they will increase; and if there were to be the stations of three or four large companies on one spot, they must either leave it ultimately, or absorb the whole of the district."

It is true that to the following question (1,090), namely, whether a scheme for collecting and distributing traffic might be devised, preserving the present termini rather out of the centre of the metropolis, he replied:—

"No doubt these omnibus railways will, to some extent, collect traffic for the larger railways; but I think that all the large railways will ultimately find it necessary to bring their stations nearer to the centre of London. In fact, they are doing so." . . . . .

He adds that he thinks it desirable the Great Northern and the Midland should come into the centre of London; and that no system of the collection of traffic for them, will do away with the necessity of maintaining stations for themselves. How are we to reconcile the first opinion with the last, and this last with the convenience of London, any more than the first opinion with the existence of the Charing-Cross station.

We differ from Lord Derby, to whom however credit for previous exertions is due, on the question of the time that would be occupied by a committee or commission in thoroughly inquiring into the whole subject of the communications, including streets, and respecting what he seems to consider the difficulty of the labour. The case of Paris is very different to that of London, both as to present size of the capital, and probable increase; yet it helps us to see that a good working-plan for a much larger capital might be made. Principles of the planning settled upon, and an arrangement designed and got into the form of plan, so far from time having been lost, it is gained. The extraordinarily rapid execution of the London Main-drainage works, and the excellence of the work, are due to the previous care in designing and showing everything by drawings; the time required for which, the public, by their organs the newspapers, complained of, only to be astonished on the discovery of the great progress made, and proximate completion. On a smaller scale, the blocks of combined residences where one staircase does the work of three staircases of houses of the ordinary system, are instances of the economy due to mere planning. Of the misfortune of not having plans to proceed upon, there seems to have been sufficient experience in Lancashire, in the application of the Public Works' Act, judging from one of Mr. Rawlinson's statements in January last, which ascribes to the omission the slow commencement of works, at the very moment when the labour and funds were available.

Now, on the question of railways across London, and of great central stations, or even of such stations as the Charing Cross, we could say much. Whether we might prove the stations and lines that have been allowed to seek the sanction of Parliament, with others of which the works are nearly completed, to be generally opposed to a good principle of planning for London, or not, we should hardly fail to show that the promotion of most of these schemes affords an argument for not delaying the plan of the metropolis until such time as the great change which they may effect shall have been accomplished.

The joint committee of Lords and Commons perceived the objection to great central stations, yet have permitted at least one of the lines with which it is proposed to intersect the heart of London, to appear before a committee upstairs. This line is the Hampstead, Midland, and North-Western and Charing Cross Junction. They distinctly say:—

"The scheme is in some degree open to an objection already referred to, that it tends to create a central station at Charing-cross."

But they add:—

"It, however, proposes an addition to the railway, which is to be constructed wholly in tunnel, to form three new streets, one of them of a very important character, in continuation of Tottenham-court-road from Oxford-street, in a direct line to St. Martin's-lane, near Aldridge's Repository, and from thence to the Thames Embankment, near the Charing-cross Railway Station. This new line of thoroughfare would be a substitute for the present objectionable road through Seven-dials and High-street, St Giles, and be a great public improvement. The construction of new streets in crowded parts of the metropolis, with the construction of new railways, was recommended in the report of the Lords' Committee last session. The committee are of opinion that, if the select committee to which the Bill for these schemes may be referred should see fit to sanction the scheme, they should do so only on condition that the new streets above referred to should be constructed contemporaneously with the railway, and that provision should be made in the Bill for insuring its completion."

It is to be regretted that they did not act upon a perception of the paramount importance to London, of a system of street-communications upon the best principles that could be settled. Possibly a general plan might require long years for its realization; but they should have taken steps towards obtaining such a plan, in order that railways might be subservient to a general object, and not antagonistic to objects other than those of the shareholders, whilst to those perhaps also.

What they have chiefly done is this. They have concurred in the opinion expressed in the report of the House of Lords' Committee above mentioned, that:—

". . . . . with a view to the distribution of passenger traffic arriving by the main lines of railway coming within the metropolis, and also the relieving the crowded streets by the absorption of a large portion of the omnibus and cab traffic, the completion of the inner circuit of railways is desirable."

They therefore allow the following schemes, which contribute towards the formation of such a circuit, to be proceeded with in select committee:—

"Metropolitan District Railways (the portion forming the inner circuit 32, 33, 34, and junctions 7, 8, and 9).
Metropolitan Railway (Trinity-square Extension).
Metropolitan Railway (Notting-hill and Brompton Extension).
Metropolitan Grand Union (portion North of the Thames)."

The Committee also are of opinion:—

" that the following schemes,—viz., the East London, Great Eastern (Metropolitan stations and railways), Great Eastern (junction No. 9), North London (Kings-

land and Tottenham line), Walthamstow, Clapton, and City may be properly proceeded with, and as these schemes more or less enter into communication with, or compete or conflict in levels with the schemes above referred to, as designed to form the inner circuit, and with each other, the committee are of opinion that all the above schemes may with advantage be grouped together, and be referred to the same select committee."

In the case of two schemes pursuing almost the same line from Kensington through Brompton to the City, amalgamation is recommended. Others allowed to proceed for bills, are the Great Northern and Victoria Station, London and Blackwall (Extension); London, Brighton, and South Coast (new lines in Battersea); Great Northern (No. 1, Barnet branch); London and North-Western (additional powers); London and South-Western (additional works); North London (additional powers); London, Chatham, and Dover (No. 1); London, Chatham, and Dover (No. 2); Great Eastern (junctions, except junction No. 8); Midland and St. Pancras branch; Metropolitan (additional powers); and the Metropolitan and St. John's Wood,—the last an exceptional case, and a well-planned single line.

The inner circuit would be formed partly by the existing Metropolitan Railway, and the prolongation of it to Finsbury Circus which is in progress. From the Paddington end of the Metropolitan Railway, the Metropolitan Extension Company propose an extension through Notting-hill, and Kensington, to Brompton; and from between the two latter places, Mr. Fowler proposes a short connecting line to the West London. Mr. Fowler's main line would continue from Brompton, past the Victoria Station, and along Victoria-street to Westminster Bridge, whence it would go along the embankment and the new street from Blackfriars to Cannon-street, and to Fenchurch-street, where a length promoted by the Metropolitan Extension Company connects with the Metropolitan Railway at Finsbury Circus. It is important to mention that Mr. Fowler's inner circle line is not intended to have any junctions, but only to have its stations conveniently placed for those of the country lines. It is found that the "omnibus traffic" is as much as, or more than, can be worked on the Metropolitan. From country and suburban traffic the small return is obtained at too great cost. The Great Northern, at present running trains along the portion of the Metropolitan from Farringdon-street to King's-cross, will shortly have a line of its own, at the side of the Metropolitan; though we suppose, it must always cross at the Farringdon Station.

It may be well, whilst the question of central stations, with that of the prolongation of country and suburban lines into the heart of London, is under consideration, to note and compare the experience of the returns of the Great Northern and the Metropolitan, per train-mile, over the same ground. There are twenty-one passengers per train, on an average, by the Great Northern; whilst there are 180 by the Metropolitan; and the money-return is but 2s. 6d. in the former case, against 10s. 6d. in the latter; and this without estimating all the superior convenience to the public. It is inferred from such facts, that the termini of at least the northern lines, had better be where originally designed; that extension into London would not pay, and that any saving of cab-fares would be realized by very few passengers; for, a railway does not take every one to his door.

Mr. Fowler's schemes under the general title of the Metropolitan District Railway, included an outer circle, coinciding with the inner circle between Brompton and Notting-hill, and thence passing through Kilburn, Kentish Town, Stamford-hill, Hackney, Bow, and Limehouse, where the Thames was to be crossed by a bridge of 750 feet span, formed on a combined truss and suspension principle—the truss or girder being about 107 feet deep. The southern portion of this circle was formed chiefly of lengths of lines existing, or in course of construction. At the west, the line turned north, and crossed the Thames at Chelsea. This outer circle line had numerous connexions with the existing lines. The committee however only report that an outer circle is desirable, whilst conceiving it to be provided after uniting the existing railways on the eastern side of the metropolis, by a connexion making use of the Thames Tunnel. The committee recommend that the schemes through Finsbury-circus should be for lines there underground.

Thus, the general conclusions may be summarized as the recommendation to the committees up-stairs, of divers schemes for the inner circle, completing the Metropolitan Railway, and of a line from Charing Cross northwards by St. Martin's-lane and Tottenham-court-road. The joint committee, however, have left a large number of the most important questions which called for their consideration unsettled, questions not merely of metropolitan communications generally, but such as those between viaduct-lines, lines in cutting, and lines underground.

THE MOLECULAR STRUCTURE OF WROUGHT-IRON.

AMONGST the most remarkable manifestations, in inorganic nature, of the mysterious power of cohesion, is the continual tendency of inorganic substances to assume certain definite and constantly regular forms. This tendency can, however, only show itself under the favouring circumstances of the passage of the body from a fluid state to a solid form—on the debateable ground between a liquid produced by the presence of heat or by the solubility of the substance, —on the one hand, and a form in which cohesion is in full force—as in the case of cold iron—on the other. As Regnault observes in his treatise on crystallography, "The greater number of substances which appear devoid of regular external form, present direct indications on their recently broken surfaces of a regular or crystalline texture; so that the entire mass of these bodies is apparently the aggregation of an infinity of small crystals enveloping each other. These rudimentary crystals are often so small, that they cannot be distinguished without examining the fractured surface with the aid of a magnifier or a microscope." It is seldom that very large crystals are to be noticed in wrought-iron; but under circumstances favourable to their formation, cubic crystals, with perfect faces as large as an inch on the side, have been discovered in the interior of large iron forgings. The interior of a mass of hot iron, under an ordinarily-sized steam-hammer, is comparatively undisturbed by the blows, and the process of crystallization can begin unimpeded and advance towards its ultimate development on the cooling of the mass. We have a familiar instance of something similar in the crystallization of sugar. In a concentrated solution of sugar, allowed to cool at rest, may be formed symmetrical large crystals of sugar-candy. A disturbance or hastening of the process results in the small and irregularly shaped crystals of loaf-sugar. Now this is the case with an ordinary bar rolled or forged under the hammer. The crystals cannot completely develop themselves, and the result is indeed, in many cases, a *saccharoid* structure, closely resembling that of white sugar.

The great influence of crystallization on the structural value of iron appears to have been first pointed out in an important work of Mr. Mallet, published some years ago. Mr. Mallet's book "On the Physical Conditions involved in the Construction of Artillery," is one of the most philosophical works ever written on iron. Although, doubtless, many of its practical conclusions with reference to artillery itself have been left behind in the great progress of late years in the metallurgy of steel, the book remains a monument to the scientific power and research of its author. It is, indeed, somewhat surprising that some of its conclusions on many branches of an obscure subject have not received greater attention. Mr. Mallet puts forward, as a general law of the molecular aggregation of crystalline solids, "that when their particles consolidate under the influence of heat in motion, their crystals arrange and group themselves with their *principal axes* in lines perpendicular to the cooling or heating surfaces of the solid; that is, in the lines of direction of the heat wave in motion, which is the direction of least pressure within the mass." By "principal axis," Mr. Mallet does not necessarily mean the optic axis, but "that symmetric axis of the integrant crystal whose position, after consolidation of the mass, is found coincident with the direction in which the heat wave has passed out from the mass, if cooling, or into the mass, if heating; and which direction is necessarily that of least pressure within the mass." Numerous phenomena of consolidation of different metals are brought by Mr. Mallet under this law; but he, of course, more particularly directs his attention to iron. As a consequence of his law, "the planes of crystallization in castings of iron group themselves perpendicularly to the surfaces of external contour," or in the directions in which the heat of the fluid cast-iron has passed outwards in cooling and solidifying.

The explanation of the well-known fact that the planes of fracture of any broken casting "follow the track, with almost unerring precision, of all re-entering angles, and of all sudden changes of scantling or dimensions," is found in this law. As an instance, Mr. Mallet adduces the lower or closed end of the first shape of the cylinder for the hydraulic press used to raise the tubes of the Britannia Bridge. The bottom was made at right angles to the sides. It burst under the severe water pressure, the bottom being driven out. The planes of junction, formed at the corner at the bottom, by the vertical sides, were *planes of weakness*, as the crystals of the iron were thereat confusedly interlaced,—the principal axes of the crystals having arranged themselves in lines perpendicular to the bounding planes of the mass, and at these sharp corners there was thus a kind of solution of continuity in their arrangement. Mr. Stephenson changed the form of the bottom of the press to one of a semi-ovoidal form, and the casting, thus shaped, was found to withstand the great strain. The fact has long been known to engineers, that a sharp corner in a casting is, *per se*, prejudicial to its strength, and this is another instance in which the beauty of easily flowing lines brings strength also in its train. The law of arrangement of the crystals of wrought-iron is stated by Mr. Mallet to be essentially the same as with cast-iron. In the usual elongated masses of wrought-iron, the tendency of the crystals is, "upon the whole, to place themselves *parallel* to the principal surfaces." This law of aggregation would appear, at first sight, to be directly opposite to that of cast-iron, in which the crystals place themselves perpendicular to the surfaces of the mass. But in the two very different modes in which cast-iron and wrought-iron are respectively manufactured, will be found an explanation of this apparent discrepancy. After all, what is the main chemical difference between wrought and cast iron, but that cast-iron contains a large portion of uncombined carbon?

It will thus be found, says Mr. Mallet, "that in wrought, as in cast iron, the principal axes of the crystals tend to assume the directions of least pressure throughout the mass, while exposed to pressure and heat, in progress of manufacture." When a bar of hot iron is passed through a set of rolls, or when a length of iron is drawn into wire, the direction of least pressure is evidently coincident with the length of the bar or of the wire, and in this direction the principal axes of the crystals are found to arrange themselves. There can be no doubt that this law, which some may prefer to call a hypothesis, explains several of the metallurgical phenomena of iron. Many of the effects on iron of rolling and forging it in large masses, and the remarkable increase of strength through the cold-drawing of wire and of gun-barrels, can be thus accounted for. What is popularly termed the "fibre" of wrought-iron is thus merely the longitudinal *crystalline arrangement* peculiar to well-worked iron, of good quality, and free from cinder.

The most valuable book that has been published within late years on wrought-iron is Mr. Kirkaldy's "Inquiry into the Tensile Strength and other Properties of various Kinds of Wrought Iron and Steel." In this work are embodied the most numerous, complete, and systematic series of experiments ever made on the tensile strength of wrought iron and steel. It has seldom fallen to the lot of a book to dispel so many of what Bacon calls the *idola fori* and the *idola theatri*,—the "spectres of the market-place and of the theatre," arising from mere words and names, and wrong theories. No notion has been more current within late years than that wrought-iron is subject to a progressive deterioration caused by its supposed "fibrous" structure assuming a "crystalline" form. A forcible picture of this supposed change would be afforded by imagining a bar composed of long glass filaments. The deteriorating agents might be supposed to gradually break up these long filaments into short pieces, and to thus gradually affect the sum total of the strengths of the different filaments. Now, general experience points in too great a number of instances to a progressive deterioration of iron, under certain as yet incompletely investigated circumstances, to enable us to utterly reject the assertion. But these circumstances have been generally stated in such a loose and vague way that no strict opinion, embracing the whole question, can be formed thereon. The observers of the phenomenon have paid no regard to

e range or extent of the vibration supposed to use this deterioration in the molecular structre of iron; but have, as is usual in such cases, ken refuge in what Newton calls mere *somnia*—ientific castles in the air. The causes have en variously stated to be "percussion," "conssion," "vibration," "jar," "jarring action," ension," "bending," "deflection," "sudden oling," "frost," "friction," "heat," "magtism," &c. Some thought, as Mr. Kirkaldy serves, that one of these was sufficient, whilst hers maintained that two or three combined re necessary. Many hundred experiments ade by Mr. Kirkaldy, with his usual care, simy showed that:—"1. Whenever wrought-iron eaks *suddenly*, a crystalline appearance is the ariable result; when *gradually*, invariably a *rous* appearance. 2. Whether, on the one nd, it is finely or coarsely crystalline, or, on e other, the fibre be fine or close, or coarse d open, depends upon the quality of the iron. When there is a combination in the same bar plate of two kinds—the one harder or less ctile than the other—the appearance will be rtly crystalline and partly fibrous; the latter oduced by the gradual drawing-asunder action evious to and at the time of rupture; whilst the former the iron breaks suddenly, without ongating at time of rupture. 4. When the oportion of the harder is considerably less an the softer, the former snaps suddenly, hilst the latter continues stretching; but when arly equal, or the less ductile predominates, oth portions break together, or almost at the me moment,—the one part, gradually arriving its limit of endurance, breaks with a fibrous ppearance, whilst a greatly increased strain nsequently coming on the remaining portion, suddenly gives way, producing a crystalline ppearance. 5. The relative qualities of various ons may be pretty accurately judged of by comring their fractures, provided they have all been eated in precisely the same way, and all broken nder the same sort of strains similarly applied. 6. By varying either the shape, the treatent, the kind of strain, or its application, eces cut off the same bar will be made to preent vastly different appearances in some kinds iron, whilst in others little or no difference ll result." Now these important conclusions Mr. Kirkaldy appear to us to be easily reconlable with Mr. Mallet's law. It being granted at a bar of wrought-iron is an aggregate of ystals arranged with their principal axes rallel to the longitudinal axis of the bar, a adual strain would pull out these filaments, hile one more sudden would snap the filaentary aggregate of crystals at their facets. he force of cohesion between the different ystals has not time to exert itself during a dden strain: having no time to slide one upon nother, they thereupon give way at the cleavges. According to Mr. Kirkaldy's second conusion, the tensile strength of a bar of iron epends, *cæteris paribus*, on the arrangement and ze of the crystals, both of these being affected, Mr. Mallet has shown, by the kind of workanship and other circumstances in the manucture of the bar.

In order to examine with more precision the ternal metallic structure on the fractures, r. Kirkaldy immersed his broken specimens in ilute hydrochloric acid which, "acting on the rrounding impurities," exposed to view the ctallic portion free from the cinder. He thus ound that repeated rolling gave an appearance to he bar "like that of very fine and straight long airs or threads lying close together:" in a less orked specimen, there was "the same threadke appearance, but indistinct and wavy, very regular in size, in some parts lying close, in thers far apart." Now here is another instance f Mr. Mallet's law, that "the principal axes of he crystals of wrought-iron tend to assume the irections of least pressure throughout the mass hile exposed to pressure and heat, in process f manufacture." As we have seen in the case f a rolled bar, the direction of least pressure is vidently coincident with the length of the bar. The puddled iron, rolled, showed a more woolly han thread-like texture: crank-shaft specimens gave an extremely varied appearance, some parts eing dense, others porous,—facts which can be net by Mr. Mallet's explanation when we reflect n the processes of puddling and of forging large nasses of scrap-iron.

Perhaps the origin of the formerly current notions with respect to the "fibre" of iron may e found in a common workshop test. When a vorking smith wishes to determine for his own atisfaction the quality of the iron bar he is going to work up, he cuts a nick, or notch, in one side of the bar, and bends the bar, by striking it obliquely on the edge of his anvil. He then examines the fresh bright fracture in a good light. Long, silky fibres adhering together like a bundle of hempen strands make him believe that his iron is of a tough soft quality, easy to forge and shape, but hard to break. A coarse granular fracture indicates a harsh, brittle iron, subject to "cold shortness," or to being easily broken when in use. A "red-short" iron is generally denoted by the appearance of numerous cracks on the edges of the bar. When the smith merely wishes to try the toughness of the iron, he is generally careful not to break it, but rather strives to try its tenacity by getting a longitudinal view of the inside of the iron. As Mr. Kirkaldy says:—"In the fibrous fractures the threads are drawn out, and are viewed externally; whilst in the crystalline fractures the threads are snapped across in clusters, and are viewed internally or sectionally. In the latter cases the fracture of the specimen is always at right angles to the length: in the former it is more or less irregular." When, however, the smith wishes to get a short piece of iron from a longer bar, he uses a rather blunt-edged chisel which he slightly drives into the substance; making up, however, for the slight depth of the incision through violent vibrations at the nick by means of his sledge. An extraordinary decrease in tenacity at the nicked place of the bar is thus effected. Most people must have been, at some time or other, surprised to see iron broken so easily in this way. The iron is found to be short and crystalline at the nick, and the crystals are arranged *transversely* to the bar's length. Mr. Mallet explains the phenomenon by the fact that the position of the crystals of the bar, formerly parallel to its axis, are now arranged transversely: "the principal axes are found in the directions of least pressure within the mass."

SOMETHING ABOUT BANBURY.

Perhaps, in all England, there is no town of the same smallness which is so generally heard of as Banbury,—a rival with the "Land o' Cakes," and famous for the nursery rhyme, known to every little boy and girl,—

"Ride a cock-horse to Banbury Cross,
To see a fine lady ride on a white horse;
With rings on her fingers and bells on her toes,
She shall have music wherever she goes."

As regards this lady, who is so well known to us all, we get more complete information in what follows:—

"'Twas in the second Edward's reign,
A knight of much renown,
Yclept Lord Herbert, chanced to live
Near famous Banbury town."

This knight had one son left to his lot: fearless and brave was he; and

"It raised the pride in the father's heart,
His gallant son to see."

And so this poetic legend goes on to tell that, near Lord Herbert's ancient hall, proud Banbury Castle stood, within the noble walls of which there dwelt a maiden, young and good;—

"As fair as the rosy morning,
As fresh as the sparkling dew,
And her face as bright as the star-lit night,
With its smiles and blooming hue."

Young Edward gazed on this lady, and dreamt of her in the night; and then heralds sound their trumpets, and proclaim a festive day. To Broughton's castle, and Wroxton's pile, and Herbert's stately tower, "that looks o'er hill and dale," all come.

The legend is long. There are minstrels, and mention made of Matilda, the lady's name, and the knight's sword glancing in the moonbeams. There is a rival in the way, and young Edward nearly loses his life. But the rival turns out to be her brother.

Days passed on, as they will. Young Edward was nursed with care, and Matilda never left his side; but the young man had the stamp of death upon his face. In the castle, at that time, there lived a holy monk, who had noticed the sinking of the young lady's cheeks, and offered to effect a cure. This was his prescription:—

"To-morrow, at the midnight hour,
Go to the Cross alone:
For Edward's rash and hasty deed
Perchance thou may'st atone."

The lady goes to the cross and walks round it. Edward is cured, and a goodly festival is ordered. And now,

"Upon a milk-white steed,
A lady doth appear:
By all she's welcomed lustily
In one tremendous cheer.
With rings of brilliant lustre,
Her fingers are bedeck'd,
And bells upon her palfry hung,
To give the whole effect."

And by the side of the noble lady there rode one of noble mien and air.

"And, even in the present time,
The custom's not forgot,
But few there are who know the tale
Connected with the spot;
Though to each baby in the land
The nursery rhymes are told,
About the lady robed in white,
And Banbury Cross of old."

Enough, however, on this head. Our intention is to inquire more especially into the sanitary and social condition of Banbury, a place in many respects pleasant to the eye, but in which, unfortunately, much neglect is visible.

Mr. Beesley, in his history (1841) of this town, situate in a deep valley of the table-land of the northern part of Oxfordshire, and on the western bank of the river Cherwell, says, "The town was long proverbial for its *trade and dirt*. Its trade arises almost entirely from its being the centre of a great agricultural district, but partly also from its being the chief seat of some manufactures which are carried on among what is said by some to be a too crowded population.

The condition of this town, in Shakspeare's and Queen Elizabeth's days, must, from accounts, have been very bad; when the new church was unfinished, people said,—

"Dirty Banbury's proud people
Built a church without a steeple."

The arrangement of it, however, appears to have improved since those days; but even until lately, although the town has a pleasant aspect, and the people have, taking them in the mass, more than the average ability, there remains much to be done in the way of needful improvement. A local Board of Health has been established, which spends at present about 2s. 8d. in the pound of the yearly rental. The poor-rates of Banbury have been until lately 4s. in the pound per year: altogether the rates are very excessive; but, for the most part, the people do not complain, except as regards management and the disposal of the rates.

We have in Banbury a "debatable land," quite as troublesome as some in the metropolis. Neidthorp and Banbury, although they should only form one town, are divided into places of opposing interests. Before, however, touching that question, it will be useful to state, that the chief trade of Banbury consists in the disposal of agricultural produce. Within a radius of ten miles there are more than 140 agricultural villages and hamlets. The market at this town is a very important institution. There are also manufactories, which are increasing in importance. There is one member returned from here to Parliament; and the town stands on ground of a varied geological character. The land in the neighbourhood is generally of a superior kind—better towards the Oxfordshire than the Northampton side.

Banbury has always supported the rights of the people against the aggression of rulers. In the struggle between the Commonwealth and the King, the people here took the side against Charles I.; they were on this point opposed to Oxford. We have a well-known rhyme in allusion to opinion in Banbury:—

"From Banbury came I—
Oh, profane one
Where I saw a Puritan man
A hanging of his cat on Monday
For killing of a mouse on Sunday."

Some of the evils of the debateable ground are curiously illustrated here. For instance, a leading surgeon states,—

"Banbury is very well scavenged, but in Neidthorp you meet nuisances at every step. This applies also to the lighting, which is very bad in Neidthorp; and this is the worse for Banbury, as you cannot enter it without coming through Neidthorp. Strangers see a town shining with light at a distance."

It has been difficult to give a proper water-supply and drainage to Banbury without passing through portions of Neidthorp. There is also separate police and sanitary inspection for Banbury and the last-named place,—a circumstance which causes neglect and confusion. The police of Banbury have no power to act in Neidthorp. On this point, Mr. Pain, who is a leading man in Banbury, says,—"My house and garden are within this borough, but my back door opens into a lane in Neidthorp, near to which is a beer-shop. Some time since there was a great dis-

turbance in this place,—men fighting and women calling murder;—and at the same time a borough policeman was walking in front of my house; but the disturbance was out of his jurisdiction. I could not demand his interference." Many other instances might be given which would show the inconvenience which arises from the division of what ought to be one town.

Before the application of the Local Health Act to Banbury, the average (taking seven years) death-rate for the borough, excluding Neidthorp, was 21·6 per 1,000 of the population, which in 1848 consisted of 3,746, and in 1861 was 4,059; whilst that of Neidthorp, exclusive of deaths which occurred in the union workhouse, had been 26 in each 1,000 of the population. In the joint parishes a sixth of the whole number of deaths arose from epidemic, endemic, and contagious diseases, and the number of deaths under one year of age was more than a sixth of the whole population.

A fever, which has been called by the lower classes the "Banbury fever," has prevailed not only in this town, but in the surrounding villages; but this, although so called, does not differ from the fever which is usually to be met with in undrained and dirty situations. With the improvements in drainage, and in other respects, the death-rate of Banbury has been lessened, and there is no reason, if the measures of the Local Health Act were thoroughly carried out, why the deaths should be over 17 or 18 in the 1,000. A local Act, which applied to Banbury, was passed as far back as 1825; and before then drainage had been provided to a small extent; but this, and all that was done in connexion with the Act of 1825, was found to be next to useless. Respecting the state of the drainage in 1850, it is stated that where there were drains existing in the streets, they were not all at a sufficient depth to drain the cellars of the houses. In many cellars water was collected, which required to be pumped through a hole periodically. Mr. Hayes, a tailor, in the Horse-fair, had to pump water out of his cellar; and when there was a strong flow of water through the drain, it was apt to soak into the house: and most of the houses in this part of the town were situate in nearly the same way. The condition of other parts of Banbury and Neidthorp was very bad: in Cherwell-street, in the last-named locality, Mr. Brasier, a whitesmith, reported, that at the end of the street was a culvert that came from the borough, about 2 feet 6 inches in diameter, and emptied into a ditch about fifty yards from his house, the whole way totally neglected. The soil from the culvert completely filled the ditch and the culvert with deposit. There was no drain from the street to the culvert, and he had been obliged to dig a cesspool in his garden, which was emptied by buckets. Some of the houses had drains, but they were frequently choked up. The usual consequences followed; and whenever there was an epidemic, it was generally fatal here. Fevers were very prevalent—the "Banbury fever" in particular. In the hope of lessening these dangerous conditions, another local Act was passed, and under its provisions an effectual system of main drainage, which passes to the river, has been carried out; but it is unfortunately the case here, as it is in many other places, that the owners of houses have neglected to make a proper communication with the main drains; and, in consequence, cesspools are left to pollute the soil and poison the inhabitants. It would be of great advantage if a careful account were taken of the number of cesspools which still remain in use here, and measures should be adopted to get rid of these as speedily as possible.

Notwithstanding that a water-supply has been provided, many wells, some of them in dangerous situations, are still in use. The water-supply seems to form a subject of contention here. For the purpose of bringing to the town a plentiful supply of this necessary of life, a company was formed, which expended between 15,000*l.* and 17,000*l.* in carrying out this object. So far the work has failed to pay a fair profit on the outlay, and the company has offered to dispose of their property to the borough, at the cost price. Many of the townspeople, however, consider that much unnecessary outlay has been made; that it is scarcely fair to saddle the town with the large cost of a losing establishment, and that it should be valued in a business-like way, and a sum paid by the Corporation which the waterworks, &c., are fairly worth. This matter has, we believe, been amicably settled, and it is to be hoped the water will come into general use. Care must, however, be taken, that the source may be kept free from certain pollutions which we have hinted at.

Several of the houses here, which are let as common lodging-houses, require careful inspection. They contrast very unfavourably with places of a similar description which are under the charge of the metropolitan sanitary police. Those in Banbury are generally in a dirty, neglected condition, and there can be no doubt that overcrowding — particularly at certain seasons—takes place to a very dangerous extent. The ventilation and cleanliness of those places should be at once attended to; and care should be taken that more beds are not allowed than the space will justify.

Generally, the paving has been very much improved; and in the main thoroughfares the scavenging is managed in a satisfactory manner. But in the back-slums, both in Banbury and in Neidthorp, where fevers are for the most part generated, more especial attention should be paid. The horse-fair in Banbury, in which the modern cross is placed, is a fine open space, kept beautifully clean, and is surrounded by substantially constructed houses—for the most part built of a grey-coloured stone, which is pleasant to the eye. The Corn-exchange and some of the other buildings here are worthy of note. Several of the inns are of great antiquity, and of quaint and picturesque appearance. The gateway and yard of the Reindeer Inn are especially to be noticed. There is a large dining-hall here, which seems to date as far back as the reign of Henry VII., and retains most of its original features.

In the road from Banbury to Stratford-on-Avon, by the way of Edge Hill, we found that, upon the whole, the cottages were of a better class than those in Buckinghamshire and Hertfordshire, being for the most part of a larger size, and built in a substantial manner with stone. Edge Hill, a spot of great interest in connexion with the Commonwealth wars, offers a scene that cannot be readily forgotten. From Banbury, hill after hill rises to a great height, and towards Stratford the land descends in a steep ridge. From the top there is a remarkable view, which, in a clear day, takes in Wales: towns, villages, streams, and a fine country are seen as in a map as far as the eye can reach; but we have seldom met with anything more wild, rugged, and solitary than is the far-famed battle-field we have named.

THE NARROW TEACHING OF THE ROYAL INSTITUTE OF BRITISH ARCHITECTS.

I AM fully aware that since the Institute of Architects, under bad advice, turned out reporters, prevented publication of its papers, made it a crime for a member or visitor to communicate to the outside world any little morsel of information he might pick up at one of its meetings,—gave up, in short, that publicity which had brought it popularity,—its proceedings have passed from the scope of the *Builder*. In the interest of art, however, and of the rising generation of architects, I request permission,—I am almost disposed to say I demand permission,—to ask of some of the senior members of the Institute a question of serious import.

At the house of a friend, who is an Honorary Member, I have just seen the last issue of "Sessional Papers" (Part II., No. 4), containing a memoir by one of the Hon. Secretaries, written, it is stated, to supply a blank caused by the postponement of two papers which had been promised. This paper deals with what the writer calls the "*Hair-stand-on-end-style*," and another variety of art, the "*Galvanized-glove-stretcher-mumia*," whatever that may be, and asserts that Paris has been reduced to the appearance of "a gigantic asylum for highly respectable lunatics." But I am not about to make any comment on this, which is a matter of taste: I am a grave man, old enough to have been intimate with Athenian Aberdeen, and my notions of what should be found in the "Transactions" of a chartered body may be antiquated. Moreover, I have no right to subject you to a correspondence in reply on such a point. What really concerns us all is this. In the course of the paper I find, after a sentence deploring the "*Classic malady*," and urging efforts to prevent "the spread of its cankering disease," the following note:—

"A very hopeful sign is, that out of the numerous designs sent this session in competition for the premiums offered by the Institute, not one is in the Classic style; but all, without exception, are treated Mediæwally."

This, we will take for granted, is a note by the author of the paper, but by many it will be read as a note by the editor representing the Council, papers *read* before learned societies not usually having notes. Now, sir, I wish to ask the present President of the Institute, also Professor of Architecture in London University, and Mr. Smirke, Professor of Architecture in the Royal Academy, if this be the teaching they desire should go forth in their name,—if this narrow sectarian view, the result of a fashion, the small doctrine of small men, be the view they desire should be taken by the rising generation of architects in their studies? If so, the sooner we know it the better. Are the glories of Greece and Rome to be no longer referred to? Are the immutable principles which guided the great men of old to be no more studied and made available?

Do the mediocrities of to-day who reproduce examples of French Gothic architecture and copy morsels from the "Ducal Palace," imagine they are doing more for true art than the mediocrities of a past time did who turned the end of a Roman temple into a house, or copied the Parthenon whenever the opportunity occurred? If they think so, the judicious do not. Let them be assured their time to be found out and ridiculed will come, as surely as the others have been found out and ridiculed.

The point, however, is, do the leading members of the Institute of Architects wish us to thank God that students no longer pay any attention to the teachings of Classic art?

M. A. *Cambridge.*

THE IMPROVEMENTS IN PARIS:

THE QUESTION OF THEIR IMPORTANCE IN THE VIEW OF THE INCREASING MORTALITY OF LONDON.

IN a recent article headed "The Financial Question of the Works in Paris,"* we gave statistics, and referred to some of the most important results of the improvements in the French capital. In our volume for 1861, in several articles, we had treated of the question between London and Paris improvements, when we inquired into the facts of the distribution and density of the population, referred to the imputations against the municipality, of having caused the dearness of residences, and noticed the migration or removal of many of the inhabitants, from the central districts to the annexed zone situate between the ancient *barrière* and the fortifications; and, at the end of our last volume,† we gave the figures, then just published, of the latest one of the statements of increase in the number of residences, which statements would tend to an exculpation of the management of the works. We noted in 1861, the assertion of a considerable amelioration in the health of the inhabitants of the French capital, since the works were commenced, and at the same time, having obtained the figures, we compared the number of deaths in Paris, with those of London, per thousand of living persons, and found that the sanitary condition of the latter capital, gauged by the standard of mortality, was very slightly, if at all, superior to that of the former. The comparison just referred to,—never before made, or at least published, that we are aware of,—and the facts which were unveiled by it, surprised many; but, notwithstanding that we have one correction to make, the general conclusion will be found substantiated by more recent information which we are now able to give, as we find it in reports, or as we deduce it by calculation.

In particular, there is a statement, published last January in the *Moniteur*, which is very remarkable. It is made by M. Devinck, in a report presented by him in the name of the committee of finance, to the municipal council of Paris. M. Devinck says that the mortality which was in 1858, 1 death to 38 inhabitants, was reduced in 1862 to 1 death for 41 inhabitants. In other words, it was 26·32 per thousand of the living; and it is now, 24·39 per thousand. This last would be less than the mortality of London taken at 2·452 per cent., which is actually the figure given in the Summary of the Registrar-General dated 18th of last month.

In our volume for 1861, we made the mortality of Paris in 1860, only a trifle over that of London; as indeed it was: but, by taking, in place of those of the Registrar-General's Summary, Dr. Letheby's figures,—all that we happened

* Page 874 in last volume.
† See page 911 ditto.

to have access to in Paris; but which may have been correct for some average, whilst not quite so for the year 1860,—we made the mortality of London for the year, rather greater than it is now stated to have been, and the excess of mortality for Paris less than it then was. The figures in the Registrar-General's Summary undergo correction each year, for several preceding years; and, shortly after the year of a census, the alteration may be greater for the concluding years of the previous decade, than for the years immediately following; but, in the case of France, where the census is every five years, the rough method suggested to us by the French statisticians, of estimating the increase of population for each year as one-fifth of the previous quinquennial increase, may involve less margin of error. We took the mortality of all London, from Dr. Letheby, as 24·5 per thousand; and we made that of Paris for 1860, 24·75: but, now, from the Summary we have mentioned, it is clear that the mortality of London for 1860, was only 2·249 per cent., or 22·49 per thousand, that is 2·01 less per thousand than we stated. The average of several years would make the figure higher, as indeed it has become, we have shown, for the year now lately expired.

Let us endeavour to check the statements by M. Devinck, and make a fresh comparison of the condition of Paris and London, noting the figures of the account of the time passed since our previous comparison, excluding, for the present moment, the year 1863, for which the figures, though applied for, have not yet reached us from the *Bureau de la Statistique* of the Hôtel de Ville, Paris.

The number of the "*Annuaire*" of the "*Bureau des Longitudes*" of the present year, gives the figures of the total population of Paris; and separately, of each of the 20 *arrondissements* and 80 *quartiers*. The total population in 1861, the year of the census, was exceedingly close to what we made it, estimating before the year had expired. The year of the previous census was 1856. Then the outer "zone" not included in the city, of course was counted distinctly; but we have before us a separate sheet with the figures as in 1856, both for city and suburbs, arranged as though the extensions and new divisions had been fixed in 1856. A comparison of the two lists thus enables us to give the following comparative statement of the population of the whole of Paris.

Population in 1856:—		
Exclusive of the garrison	1,500,129	
Garrison	25,813	
Total		1,525,942
Population in 1861:—		
Exclusive of the garrison	1,667,841	
Garrison	28,300	
Total		1,696,141
Increase in five years		170,199

To get approximately the population at the end of last year, we might calculate thus:—

Population in 1861, total	1,696,141
Increase in 1862 and 1863 together, say two-fifths of previous increase	68,080
Population 31st December, 1863, as estimated	1,764,221

It may be interesting to note that the population of London is now estimated as having been in the middle of the year 1863, 2,904,413 persons. Sir Wm. Petty, in 1687, speaks of the people of Paris as having been, before the Restoration, more than those of London and Dublin put together; although, at the time of his writing, he believed the people of London to be more than those of Paris and Rome, or of Paris and Rouen.*

We will now give what we believe to be a perfectly accurate view of the mortality of the two capitals for the years 1860, 1861, and 1862, so as to lead to the best idea that can be formed of what is the comparative position at this time, and what may have been the effect of the Paris improvements, an effect as we have seen, directly stated by M. Devinck as most important and beneficial. The figures for Paris are worked out by a simple calculation from those of the population, known or estimated, of each year, and of the mortality as given in the annual publication already named: those for London are copied from the Summary of last month, only shifting the decimal points and adding a cypher, so as to make the statement in each case per thousand of the living, instead of per cent.

In 1860:—	Per Thousand.
In Paris (including the garrison, which appears to be very healthy), the deaths were at the rate of	24·745
In London, they were	22·490
Thus, the rate of mortality of Paris exceeded the London rate	2·255

* Cunningham's Handbook of London.

In the following year, there was a considerable increase in the mortality of each capital. The increase was greater in Paris than in London. So that we find the comparative view as it is here:—

In 1861:—	Per Thousand.
In Paris (the garrison included), mortality	25·656
In London, do.	23·180
Thus, the excess for Paris had *risen* to	2·476

In the next following year, however, the mortality of Paris again took the descending course whilst that of London continued to ascend.

In 1862:—	Per Thousand.
In Paris (garrison as before, included), mortality	24·338
In London, do.	23·560
Thus the excess of the rate of mortality of Paris, over the London rate, had *been reduced* to	0·778

In 1863, as already stated, the London rate of mortality rose to 24·52 per thousand; or should M. Devinck's statement apply to the latest period, Paris would be now healthier than London. The mean or average of three years, excluding 1863, indeed, shows that London has been more healthy than Paris, though by no means to the extent supposed in some published statements which give the rate for the French capital as 28 in the thousand. Thus:—

In 1860, 1861, 1862:—		
In Paris:—	Per Thousand.	
1860 =	24·745	
1861 =	25·656	
1862 =	24·338	
	74·739 ÷ 3 = 24·913	mean of the three years.
In London:—	Per Thousand.	
1860 =	22·490	
1861 =	23·180	
1862 =	23·560	
	69·230 ÷ 3 = 23·077	do.
Excess of the rate of mortality of Paris, per thousand, over the London rate	1·836	do.

That is to say, the mortality of Paris is not 2 in a thousand of the living, greater than the mortality of that which is esteemed the healthiest capital in Europe; whilst it has appeared to us by no means clear, that the French capital is not now becoming healthier than the English.

In the absence of details of the mortality in the separate quarters of Paris, it would be useless to enter upon a statement of figures for the different districts of London. We only need to allude to the fact that for 100 deaths in Whitechapel, there are but 58 in Hampstead; and observe that we showed in 1861, that different quarters of Paris would also present startling contrasts. But we may repeat that the mortality of Paris is greatly below that of some of the chief towns in England, such as Bristol, Leeds, Hull, Manchester, and Liverpool. In the ten years ending 1850, the mortality of the last-named town was at the average annual rate of 36 deaths to 1,000 persons living.

The mortality of Berlin has been stated as 25 in the thousand; that of Turin as 26; Hamburg, 36; Moscow, 38; St. Petersburg, 41; and Vienna, 49. Dr. Letheby, we see, in his report of January last, gives the death-rate for the city of London for the last year, as 25·1, and the average annual death-rate during the last ten years as 24·3 per thousand, as compared with 24·4 the rate of the chief towns and town-districts of England, that of the whole of England being 22·2, and that of the country districts 19·8.

In the article in which our former comparison was made, we alluded to the fact of an apparently greater mortality of young children in London than in Paris, and a much greater in some English towns, as Glasgow. The question involved here is a very curious one; but it is complicated by circumstances which seem peculiar to Paris.

In the year 1860, the births in Paris exceeded the deaths by the number 9,795; in 1861, they exceeded them by 9,906; and in 1862 by 10,127. Thus, the increase of births from 1860 to the end of 1861 would be 2,514; but from 1861 to the end of 1862, there was a decrease of 1,258. The increase of deaths in 1861 was 2,403; but, in the deaths, as in the births, there was a decrease from 1861 to the end of 1862 of 1,479. In 1861 the increase of births exceeded the increase of deaths by the number 111 only. We have already alluded to this as an unhealthy year. In 1862, however, the deaths decreased more than the births decreased. There was an actual decrease of births, as stated, amounting to 1,258, but as the deaths decreased 1,479, we may call the result the same as if the births had continued in the ascendant by the number of difference 221. Certainly it might require to be seen whether children born in Paris were sent out to die. Still the figures which we have deduced by calculation, from the annual and quinquennial returns, may be considered to have a certain importance.

As to the general mortality of Paris, there was in 1860, one death to about 40¼ inhabitants (exactly 40·411): in 1861, truly, the mortality was increased so that there was one death to about 39 inhabitants (38·977); but in 1862, it again fell, and to a somewhat lower point than that at which it stood in 1860, there being in 1862, one death to a trifle more than 41 (41·088) inhabitants. We found in 1861, that there was ample reason to credit the statement that it had then been falling for several years, and we have now evidence that M. Devinck's last assertion is not without the best foundation. We shall look with interest for the facts and figures, from Paris, of the year 1863. But, if those given above be correct,—and we do not see how they can be invalidated,—the example of Paris ought to be followed in London, in the opening of ample and wide lines of communication and aëration, on a plan matured after consideration of principles; and of this we yet see little evidence of preparation.

"THE BOOK OF DAYS."

A STORE of anecdote, biography, and history, curiosities of literature, and oddities of human life and character, such as this, has probably never before been collected.* The editor is well known to have special qualifications for the getting up of an Old World's work such as this; and the result is a portly book, teeming with curious information, and illustrated by not far short, we should think, of 1,000 well-executed engravings, many of them copies of curious old cuts of rare interest.

In the preface, the editor tells us that,—

"The Book of Days was designed to consist of—1. Matters connected with the Church Kalendar, including the popular festivals, saints' days, and other holidays, with illustrations of Christian antiquities in general. 2. Phenomena connected with the seasonal changes. 3. Folk Lore of the United Kingdom—namely, popular notions and observances connected with times and seasons. 4. Notable events, biographies, and anecdotes connected with the days of the year. 5. Articles of popular archæology, of an entertaining character, tending to illustrate the progress of civilization, manners, literature, and ideas, in these kingdoms. 6. Curious, fugitive, and inedited pieces."

Well and faithfully has this programme been carried out. The Book of Days was a happy thought for one of the most miscellaneous of literary *mélanges*, wherewith even the briefest intervals of leisure may be saved up, as it were, in every haphazard dip into its pages, by the acquisition of something or other in the shape of knowledge of a useful or entertaining description.

It is impossible to give any idea of the diversified character of the work by varied quotations; and we shall, therefore, not make any attempt to do so; but it may not be out of place, at the present time, to present our readers with an account, somewhat condensed, of the Shakspeare Commemoration Festival of 1769, which the editor of the "Book of Days" has compiled from the newspapers and magazines of the time. Stratford-on-Avon was the scene, and Garrick the master of ceremonies.

On the morning of Wednesday, the 6th of September, at five o'clock, the proceedings were inaugurated by a serenade performed through the streets by a band of musicians and singers from Drury-lane Theatre. Several guns were then fired, and the magistrates assembled about eight o'clock in one of the principal streets. A public breakfast was prepared in the new town-hall at nine, presided over by Mr. Garrick as steward, who, previous to the reception of the general company, was formally waited on by the mayor and corporation of Stratford, and presented with a medallion of Shakspeare, carved on a piece of the famous mulberry-tree, and richly set in gold. At breakfast, favours in honour of the great dramatist were universally worn by ladies as well as gentlemen, and the assemblage numbered the most distinguished of the aristocracy amid its guests. This entertainment having been concluded, the company proceeded to the church, where the oratorio of "Judith"

* "The Book of Days: a Miscellany of Popular Antiquities in connexion with the Calendar." Edited by Robert Chambers. In two vols. 1863.

was performed under the superintendence of Dr. Arne. A procession, with music, led by Mr. Garrick, was then formed from the church to the amphitheatre, a wooden building erected for the occasion on the bank of the Avon, constructed after the manner of the Rotunda at Ranelagh, in the form of an octagon, with a roof supported by eight pillars, and elegantly painted and gilded. Here dinner was served up at three o'clock, and a suitable interval having elapsed a musical performance took place, at which several songs, chiefly written by Garrick, were received with the greatest applause by the audience.

A grand ball commenced in the amphitheatre in the evening, and was kept up till three o'clock next morning. In front of the building, an ambitious transparency was exhibited, representing Time leading Shakspeare to immortality, with Tragedy on one side and Comedy on the other. A general illumination took place in the town, along with a brilliant display of fireworks, under the management of Mr. Angelo. The next morning was ushered in, like the former, by firing of cannon, serenading, and ringing of bells. A public breakfast was again served in the town-hall; and at eleven o'clock the company repaired to the amphitheatre, to hear performed Garrick's "Shakspeare Ode," which he had composed for the dedication of the town-hall, and placing there a statue of the great bard presented by Garrick to the corporation.

An epilogue addressed to the ladies, and delivered by Garrick, closed this part of the ceremonial.

The remainder of Thursday was, like the previous day, spent in dining, listening to a concert, and witnessing illuminations and fire-works. At midnight commenced a grand masquerade, said to have been one of the finest entertainments of the kind ever witnessed in Britain. Three ladies, who personated Macbeth's witches, and another, who appeared as Dame Quickly, excited universal admiration. An Oxford gentleman assumed, with great effect, the character of Lord Ogleby; but a person dressed as the Devil gave inexpressible offence. One individual, whose costume attracted special attention, was James Boswell, whom an engraving here represents as he appeared at the Stratford jubilee masquerade, in the character of an armed chief of Corsica, an island of which he had happened to publish an account, and regarding which he had, as his countrymen in the north would say, "a bee in his bonnet." In this character he delivered a poetical address, sufficiently grandiose and Cambyscan, on the united subjects of Corsica and the Stratford jubilee. There can be no doubt, as Mr. Croker remarks, that poor Bozzy made a sad fool of himself, both on this and other occasions during the jubilee, and would have done well to have followed the advice of his blunt-spoken Mentor, "to clear his head of Corsica." During his stay at Stratford, he is said to have gone about with the words "Corsica Boswell" printed in large letters outside his hat, that no one might remain in ignorance of the presence of so illustrious a personage.

On the masquerade revellers awaking from their slumbers on the following day (Friday), they found a deluge of rain, which had continued unintermittedly from the previous night, descending on the town of Stratford. All prospect, therefore, of carrying out the proposed Shakspeare pageant, in which the principal characters in his plays were to have been represented in a triumphal procession, *al fresco*, with chariots, banners, and all proper adjuncts, was rendered hopeless. There was, however, a jubilee horse-race, which was well attended, though the animals were up to their knees in water. In the evening another grand ball took place in the town-hall, in which the graceful minuet-dancing of Mrs. Garrick, who in her youth had been a distinguished Terpsichorean performer on the London stage, won the highest encomiums. The assembly broke up at four o'clock on Saturday morning, and so ended the Stratford jubilee.

In October, the Shakspeare pageant devised by Garrick, but the representation of which had been prevented by the unfavourable weather, was brought out by him with great magnificence and success at Drury-lane Theatre, and had a run of nearly a hundred nights.

One other specimen of these many-featured volumes we may give,—namely, a paper on Bells, which we must also abbreviate.

In monkish Mediæval times, church-bells enjoyed peculiar esteem. They were treated in great measure as voices, and were inscribed with Latin ejaculations and prayers. Many bells are found to have identical inscriptions: there is, however, great variety, and further search would bring much more to light.

In those old times, pious queens and gentlewomen threw into the mass of metal that was to be cast into a bell their gold and silver ornaments; and a feeling of reverence for the interceding voices was common to gentle and simple. They were sometimes cast in monasteries, under the superintendence of ecclesiastics of rank. One of the ancient windows on the north side of the nave of York minster is filled with stained glass, which is divided into subjects representing the various processes of bell-casting, bell-cleaning, and bell-turning, and has for a border a series of bells, one below another; proving that the associations with which bells were regarded rendered them both ecclesiastical and pictorial in the eyes of the artists of old.

King Henry VIII. looked upon church-bells only as so much metal that could be melted down and sold. Hence, in the general destruction and distribution of church-property in his reign, countless bells disappeared, to be sold as mere metal. Many curious coincidences attended this wholesale appropriation. Ships attempting to carry bells across the seas foundered in several havens, as at Lynn, and at Yarmouth; and, fourteen of the Jersey bells being wrecked at the entrance of the harbour of St. Malo, a saying arose to the effect that when the wind blows the drowned bells are ringing. A certain bishop of Bangor, too, who sold the bells of his cathedral, was stricken with blindness when he went to see them shipped; and Sir Miles Partridge, who won the Jesus bells of St. Paul's, London, from King Henry, at dice, was not long afterwards hanged on Tower-hill. Notwithstanding the regal and archiepiscopal disregard of bells, they did not altogether pass from popular esteem. Within the last half-century, at Brenckburne, in Northumberland, old people pointed out a tree beneath which, they had been told when they were young, a treasure was buried. And when this treasure was sought and found, it turned out to be nothing more than fragments of the bell of the ruined priory church close by.

After the Reformation, the inscriptions on bells were addressed to man, not to Heaven; and were rendered in English. There is an exception to this rule, however, at Sherborne, where there is a fire-bell, 1652, addressed conjointly to Heaven and man: "Lord, quench this furious flame: Arise, run, help, put out the same."

The sanctus-bell used to be rung in the performance of mass, when the priest came to the words, "Sancte, Sancte, Sancte, Deus Sabaoth," so that those persons unable to attend might yet be able to bow down and worship at this particular moment. For this reason, the bell was always placed in a position where it might be heard as far as possible. In the gables of the chancel arches of ancient churches, are seen small square apertures, whose use few people can divine. It was through these that the ringers watched the services below, so as to be able to ring at the right time.

The great bell of Bow owes its reputation to the nursery legends of "Oranges and lemons, said the bells of St. Clement's;" not to any superior characteristics, for it is exceeded in size and weight by many others. English bells, generally, are smaller than those of foreign countries; perhaps for the reason that scientific ringing is not practised abroad; and all effect must be produced by the bells themselves, not by the mode in which they are handled. The more polite the nation, it is argued, the smaller their bells. The Italians have few bells, and those that they have are small. The Flemish and Germans, on the other hand, have great numbers of large bells. The Chinese once boasted of possessing the largest bells in the world; but Russia has since borne off the palm, or in other words, carried away the bell, by hanging one in Moscow Cathedral, measuring 19 feet in height, and 63 feet 11 inches round the rim. By the side of these proportions, our Big Bens and Big Toms are diminutive. The great bell of St. Paul's is but 9 feet in diameter, and weighs but 12,000 lb. The largest bell in Exeter Cathedral weighs 17,470 lb.; the famous Bow bell but 5,800 lb. York, Gloucester, Canterbury, Lincoln, and Oxford, can also eclipse our familiar friend.

Bells have their literature as well as legends. Their histories are written in many russet-coloured volumes, in Latin, in French, and in Italian. These have been published in different parts of Europe, in Paris, in Leipsic, in Geneva, in Rome, in Frankfort, in Pisa, in Dresden, in Naples, in the fifteenth, sixteenth, seventeenth, and eighteenth centuries. They take the form of dissertations, treatises, descriptions, and notes. Early English writers confined themselves more especially to elucidating the art of ringing, in essays bewilderingly technical. The names of the different permutations read like the reverie of a lunatic—single bob, plain bob, grandsire bob, single bob minor, grandsire treble, bob major, caters, bob royal, and bob maximus; and the names of the parts of a bell are quite as puzzling to the uninitiated. There are the canons, called also *ansa*, the haunch, otherwise *cerebrum vel caput*, the waist, *latus*, the soundbow, the mouth, or labium, the brim, and the clapper.

A very full and useful general index, of about forty-five of the large pages of the work, gives easy reference to the multitude of subjects contained in these highly entertaining volumes.

TRINITY COLLEGE CHURCH AND THE EDINBURGH COUNCIL.

THE House of Lords having now on appeal modified the decision of the Court of Session, in Scotland, by directing that out of the 17,171*l.* received by the Lord Provost, magistrates, and council of Edinburgh, as compensation for the Collegiate Church of the Holy Trinity, the site of which was acquired by the North British Railway Company some years ago, 7,000*l.* be applied to building a new church, and the rest for the benefit of the hospital or charity with which the collegiate church was connected; the lovers of historical monuments and ecclesiastical art will do well to see that the town council do not escape from their obligation to *reconstruct* this celebrated edifice, and to carry into effect a *fac-simile* rebuilding.

The circumstances connected with this church, and with the long-continued attempts of the town council to misapply the fund which they received for its restoration, are altogether unparalleled.

It will be in the remembrance of your readers that this building, which had for its founder Mary of Gueldres, widow of James II. of Scotland, was architecturally one of the most beautiful and interesting of the historical monuments of that realm, and was deemed unequalled in richness and beauty of design. It was used, since the municipality became owners, not only as the chapel of the hospital attached to it by the royal foundress, but as one of the city churches, down to 1848; the town council having been from the year 1567 in possession of the hospital estates charged with the support of "eleven aged and impotent persons, who in their old age had lost their means by the events of adverse fortune." But in 1848 the church was taken down, and the stones were numbered and preserved, in order that it might be built anew upon another site.

When the church was first threatened with demolition for the purposes of the North British Railway Company, several noblemen and magistrates of Scotland, aided by some English ecclesiologists, interfered for its preservation; and, although they could not save it, the result of their exertions was that the Select Committee on the Railway Company's Bill stipulated that before the building should be taken down, the company should either rebuild the church with the approbation of the magistrates and Council of Edinburgh, or should pay to that body the estimated cost of rebuilding "*a church of the same style and model*,"—a stipulation by which (as Mr. Beresford Hope, who was a member of that committee, has stated) the committee intended, and all parties understood, a *fac-simile* rebuilding.

Mr. Rhind, the architect, who seems to have been employed by the company, estimated the cost of building a new church accordingly; that is, a church of the same style and model, at the sum of 16,371*l.*; but nothing less would satisfy the town council at that time than the re-construction of the old building upon another site; and ultimately the company adopted the alternative given by the Act, and paid the above-mentioned sum to the town council. Plans of the building were thereupon made, and the stones composing it were numbered and removed to the slope of the Calton-hill, in order to its restoration elsewhere. The town council then invited estimates for rebuilding the edifice upon the plan and with the materials of the ancient church, and the cost appears to have been estimated at 10,400*l.* That estimate, however, contemplated the re-working of the whole of the stones.

ST. STEPHEN'S CHURCH, SOUTH KENSINGTON.—Mr. Peacock, Architect.

It will be seen that in these negotiations, and in subsequent acts of the town council of the time, that body acted as trustees for the restoration of the fabric out of the large sum of 16,371*l.* paid to them for that purpose. But time went on, and possession of the money seems to have altered the view of the majority of the town council, with regard to this obligation and its fulfilment; and in 1853 the council proposed to apply the money to another purpose, and to build a large edifice of a plain character in lieu of Trinity Church, and to fund the residue for "ministers' stipends" in the city,—a proposal which called forth the indignant remonstrance of several gentlemen of high character and position in Scotland as well as in England.

But the Dissenting interest in Edinburgh had set its heart upon securing this large sum of money for its own purposes; and, from a report which appeared in the *Times* towards the close of 1856, it appears that a majority of the town council of that year had been elected by the Free Church and Dissenting interest for the purpose of securing that misappropriation. So at length the council in effect resolved to disavow its obligation to rebuild the church according to the Act of Parliament, and resolved that so much of the money as should be necessary, should be applied to build what the council should deem "a suitable church," and that the rest should be held for other purposes.

And thus, instead of the picturesque capital of Scotland being adorned with a conspicuously placed and accurate restoration of the once beautiful church of the Holy Trinity, an auditorium was to be built, and the remainder of the money, which had been paid by the railway company as the estimated cost of restoring the church, was to be applied to such other purposes as this repudiating municipality should think fit!

The town council continued to resist the combined influence of the remonstrants, who included almost every representative of law and learning, arts, and antiquities in Edinburgh; and meantime two sets of claimants sprang up, the one contending that the money had been paid in respect of property of the hospital, and should be applied for charitable purposes, and the other, that it should be applied in the rebuilding of the church, in such a manner that the new structure should correspond stone for stone with the church pulled down. The court of session was applied to, and that court held the town council bound to rebuild the church, and decreed the fund received from the company to be charged with that liability. The council were, moreover, mulcted in the costs of the proceeding to which their chicanery had given rise.

The town council appear to have suggested that the sum of 7,000*l.* should be applied to build a new church, and that the rest of the money should go to the benefit of the charity, and to this suggestion the recent decree of the House of Lords appears to give effect. In so far as the "ministers' stipends" scheme is defeated, I have nothing to say against it, but how that decree is to be reconciled with the intention of the Railway Company's Act is not so clear, seeing that the lowest estimate for the restoration was upwards of 9,000*l.*, and that the building a new church and building the old church anew are very different things.

The question now is, What kind of church is to be built? Are the 7,000*l.* to be applied in rebuilding the ancient edifice as it stood, but upon another site, or to building a church of a different style and model? It is the duty of the Edinburgh people to take care that the obligation contracted by the council is fulfilled in a proper manner; and the City of Edinburgh will make the perfidy its own if it does not insist upon the restoration of the original church. The plans made in 1848, and the dressed and sculptured stones, numbered for replacement in their original position, remain; and the corporation architect, not long ago, reported the materials to be in good preservation. I have not before me the case presented to the House of Lords on the appeal; and it may be that the only question raised was whether the whole, or only part, of the sum in question, should be applied to charitable purposes; and that the obligation imposed by the Railway Company's Act was not brought to the notice of their lordships.

Wm. Sidney Gibson.

ST. STEPHEN'S CHURCH, SOUTH KENSINGTON.

It is proposed to erect a new church in the important district of South Kensington to meet the wants of its rapidly increasing inhabitants. Archdeacon Sinclair, to whose exertions it will be due, has obtained a site at the cost of about 3,000*l.*, directly opposite to Queen's Gate Gardens. It adjoins the Gloucester-road, and is open on all sides. A design by Mr. Peacock, which we publish, has been determined on, and the erection will be commenced as soon as funds can be raised. A strong appeal is made for subscriptions.

FINE ARTS APPLIED TO INDUSTRY.

Under this title a course of lectures is being delivered at the Society of Arts, by Mr. Burges.

The programme of the first (February 8th) ran thus:—"What is an Art-manufacture?—Advancing state of English Manufactures in an Art point of view—Much owing to Government Schools of Art—Impediments to further Progress: 1. Want of a distinctive Architecture in the nineteenth century fatal to Art generally; 2. Want of a good Costume fatal to Colour; 3. Want of sufficient Teaching of the Figure fatal to Art in detail—Hints for the advancement of Art applied to Industry."

The lecturer, after observing that the only way of exercising an influence on the progress of art was the application of it to objects made in great quantities for every-day use, and after adducing the example of the Greeks in this respect, proceeded to comment on the unwillingness in certain quarters to make a legitimate use of machinery, one great mission of which was defined as the reduction of pounds to shillings and of shillings to pence. This prejudice was referred to a misunderstanding of the teaching of Mr. Ruskin and of the late Mr. Pugin; whereas the real object of these gentlemen was the discouragement of mechanical appliances to objects where life and variety were particularly wanted. After bringing forward some instances where, by a proper use of such appliances, really artistic objects might have been produced at a price exceedingly below their present cost, the lecturer proceeded to congratulate the English manufacturers on the great improvements manifested of late years. In support of this he quoted the opinion of M. le Comte Clement de Ris, a gentleman sent over last year by the French Government to study the Soane Museum. M. de Ris advised "the French manufacturers, if they do not wish to find in ten years' time powerful rivals where hitherto they have only met humble tributaries, by no means to sleep upon their laurels." This progress was pronounced to be due to the general development of art, and, above all, to the schools of design and the admirable museum at South Kensington. The principal impediments to our future progress were then noticed, the most formidable of all being the want of a distinctive architecture. This affected all branches of design, inasmuch as the student had to learn half-a-dozen different styles and their various details, the consequence being that he mastered none of them thoroughly. Want of colour in our costume was then brought forward as another great impediment, the eye of the designer being naturally influenced by the colours he habitally saw around him. Lastly, the comparative great neglect of figure-drawing was noticed as a deficiency very much to be lamented. The remedies for the present state of things, in the lecturer's opinion, were then enumerated. These were the extension of the Government schools of art, both in London and the provinces; the establishment of local museums, the contents of which should be periodically changed; the incorporation of the Mediæval department of the British Museum with the Kensington collection, and the subsequent removal of the whole to some central situation, say Charing-cross; and, above all, the bringing up a race of designers and artisans, who should be, if possible, as well versed in the drawing of the human figure as those of the sixteenth century.

The second (February 15th), treated of glass. The lecturer, after explaining the uses of antiquarian study, proceeded to give a description of antique glass. So far from the old Greeks and Romans being ignorant of this material, they made vases in great quantities, which quite equal if not surpass what we produce in the present day. Thus, vases are found which are decorated with filagree ornaments, the crackle, gilding, stamping, &c., indeed, with every process which we are accustomed to consider the peculiar invention of the Venetians. The manufactures of these latter people were then described, beginning with the older examples, now so rare, and which sell at such marvellous prices. The date of these must be placed at the latter end of the fifteenth century; and they are, for the most part, blue and green, decorated with enamelled figures, and imitation jewels and gilding, applied in the most artistic manner. The other sorts of glass, more particularly the filagree and what is called the schmelz, were referred to and illustrated by specimens of the actual old work, for the most part lent by Mr. John Webb. Modern glass manufacture was represented by some examples from the manufactory of Messrs. Powell, Whitefriars. The next application of art to glass, touched upon by the lecturer, was its employment for stained-glass windows. He first of all defined the various methods in which the Mediæval workmen arranged their subjects, such as medallion, figure, and grisaille windows; and then, in order to show why it is so commonly asserted that the modern windows are not equal to the old, went into a history of the numerous improvements of the modern stained glass, principally brought about by the exertions of Mr. C. Winston. The third part of the lecture referred to glass mosaic and its modern revival. Attention was drawn more especially to the difficulty generally found in preparing the gold, which is placed between two thicknesses of glass, the lower one having three-quarters of an inch in thickness, while the upper one is as thin as a hair. Dr. Salviati, however, appeared to have succeeded; his specimens, more especially those stamped into ornaments, obtaining a great deal of admiration. Mr. Burges concluded with a few words on enamelling, also a branch of glass-making, but which, at present, appears to be but little employed except for watch-faces and jewelry, although anciently a large trade was carried on in it at Limoges, to say nothing of the immense quantities produced in China during the two last centuries. Attention was called to the modern productions of Mr. Legoste, in which, by means of casting the metal into the required cavities, instead of scooping them out, he is enabled to sell his works at a very reasonable rate. The table and walls of the room were covered with specimens of ancient Venetian and Mediæval glass, besides some beautiful mosaics of Dr. Salviati and Mr. Fisher, and some excellent cartoons of stained glass, by Messrs. E. B. Jones & Holliday.

The third lecture (Feb. 22nd) treated of *Pottery*. The lecturer began by remarking that the history of pottery had been so often written, and the art itself had attained to so great a degree of excellence, that there was very little to say about it that would be new; the great drawback being the high prices, which placed the better sorts of majolica and pottery beyond the reach of the public generally, while there was still a vast field for improvement in the pottery of every-day life. The lecturer then went into the subject of the Greek painted vases, distinguishing the different styles and epochs of their manufacture, and drawing attention to the lightness of the material and the beauty of the drawing, especially those of the best period. Mr. Battam's imitations were noticed, and a suggestion put forth that the ware might possibly be advantageously employed for dessert services and flower vases. The Roman Samian ware and the celebrated works of Wedgwood were the next subjects touched upon, attention being called to the more harmonious tints of the early specimens as compared with the more modern productions. Mr. Burges next proceeded to give a short history of the celebrated Italian majolica, more especially the productions of Pesaro, Urbino, and Castel Durante, with short notices of the works of Luca della Robbia, Bernard de Pallissy, and of the Henry II. ware. These were compared with the modern productions of Mr. Minton. This was followed by a short notice upon tiles, more especially those commonly know as encaustic, of which the Chertsey ones were pointed out as the best examples of Mediæval art applied to the manufacture. Godwin, of Lugwardine, near Newport, in Wales, was designated by the lecturer as the best modern maker of encaustic tiles resembling the ancient ones. The last subject treated on was porcelain, the name being supposed to have been derived from the resemblance of the china to a substance (believed to be mother-o'pearl) mentioned in Mediæval inventories. The new ware was introduced into Europe by the Portuguese, in the beginning of the sixteenth century; but it was not until the middle of the succeeding one that it was first made at Dresden: other manufactories were then established at Sèvres, in France, and at Bow and Chelsea, in England. The lecturer concluded by drawing attention to the beautiful colours of the Rose du Barri and blue turquoise, as produced by Minton and Daniell, and expressed a wish that means might be found, by the application of printing, to reduce the cost of all these beautiful manufactures. On the table was a collection of specimens illustrative of the various branches of manufacture referred to by the lecturer. Mr. Wareham lent some specimens of old china. Messrs. Battam lent some Etruscan vases, ancient and modern, and some porcelain, imitating the Limoges enamel. Messrs. Phillips contributed some modern majolica and porcelain; Messrs. Daniell some porcelain from their manufactory, known as that of Rose of Coalport; Messrs. Goode lent some specimens of modern majolica and porcelain, of various kinds, manufactured by the Messrs. Minton; also some ancient majolica from the private collection of Mr. W. J. Goode, and some drawings on porcelain by the latter gentleman, after Holbein and Bartolozzi.

The subject of the fourth lecture, delivered February 29th, was Metal Work,—antique bronzes, Mediæval bronzes, modern French bronzes (Barbédienne), Mediæval dinanderie, modern ditto (Hardman, Hart, &c.), Mediæval and Renaissance wrought iron, modern ditto, cast iron.

NEW WORKS IN WINDSOR CASTLE.

A correspondent sends us some particulars of recent works in Windsor Castle:—

It having been found necessary to enlarge the Library, it was determined to remodel the room known as King Henry VII.'s Library. With that view it was gutted and refitted with oak bookcases in every available part; and the adjoining room, known as Queen Anne's Closet, was also fitted in the same way, with a gallery running round each, and the book-cases continued up to the ceiling, by which means accommodation has been made for some thousands of books. The ceiling, which was a kind of cove, has been replaced by a flat one of the time of Henry VII., with deep moulded oak ribs and plastered panels, of which there are twenty-one; and these have been richly painted by Mr. Willement, from his designs, approved of by her Majesty. The ceiling is divided into seven compartments in its length, and three in its width. The centre compartment is filled with the arms, crown, supporters, and garter of King Henry VII. The eight panels around it have, respectively, the badges of the hawthorn tree and crown, the impaled red and white rose and crown, the red rose, the full title of the king, the portcullis, the *fleur de lis*, the motto, and the red and white rose. The six panels to the left of these have been devoted to Queen Victoria, with her arms, crown and garter, the initials V. R. and crowns, the impaled red and white rose, the rose, thistle, and shamrock entwined, with the crown and motto *Quis separabit*, and the harp. The other six panels relate to the late Prince Consort, and have his arms, crown, and garter, his crest and motto, the red buffalo's head, the escarbuncle, and the initials A. P. surmounted by crowns. The whole of the panels are surrounded by ornamental borders of various designs in gold and colours, all on a very light ground. Below the panels is a very wide frieze, and this has been painted blue and decorated with white and red roses, initials, and white and gold ornaments.

The ceiling of Queen Anne's Closet has also been painted with her arms, crown, garter, and initials, her badges of the impaled rose and thistle, the harp, the motto *Semper eadem*, the single coats of England, France, Scotland, and Ireland, and the inscription, "In this closet H.M. Gracious Majesty Queen Anne first received intelligence of the victory of Blenheim, August 13th, 1704;" and has ornamental panels, the whole with coloured borders ronnd them. The ceiling of the lobby adjoining has been enriched with the initials A. and V., tied with a cord, and crowns, and the border filled with the mottoes of the Queen and the Prince Consort, and a running scroll ornament of white and red roses. The fireplace in the Library has been enriched by a carving in stone of the royal arms and supporters, from a design by Mr. Willement.

The whole of the works have been carried out under the superintendence of Mr. Salvin, architect, and to the approval of the Hon. W. F. Cowper. Mr. Myers, of Lambeth, was the builder, and Mr. Turnbull, clerk of the works.

The *Waterloo Gallery* has been improved, by taking out all the windows, which were in small squares of ground glass, and replacing them by single squares of stout plate glass, embossed with the arms, crowns, mottoes, initials, and badges of the Queen and Prince Consort, the arms of St. George and the Peninsular cross, and the crowns, initials, and mottoes of the principal of the sovereigns connected with the battle of Waterloo,—France, Austria, Prince Regent, Russia, Prussia, Holland, Spain, Portugal, and Brunswick, all within ornamental frameworks. They were designed and executed by Mr. Willement. There are fifty windows in all.

REFORM IN OUR DIETARIES.

ON this important subject the *Penny Newsman* has an *apropos* article from the hand of one who knows:—"We have adverted," says the writer, "to the legal provisions of useful work instead of pauper doles, for the relief of the unemployed, which plain and direct duty would, under competent direction, have been provided for within a month after the demand for it became evident, having only been partially brought about after more than a year of precious time had been wasted, under the pretext of leaving it to local boards, who were evidently without the requisite powers. The last week presents another example of the same sort of parliamentary misgovernment. It was a plain duty to look to the sort of food which, in the famine period, might be distributed with the best effects from the amount of money available, whether from private subscriptions or from the moneys collected from the depressed ratepayers of the famine-stricken districts. One physician only, Dr. Edward Smith, was despatched on that special mission in December, 1862. His hurried report was consigned to a large blue-book, printed and presented last year, which no pains were taken to circulate, and it was only last week that the most material and popular portions of it were made public in an accessible shape, and that as a mere abstract scientific question before the Society of Arts." The best dietaries for sustaining the best conditions for working, not for short matches, but for the best continuous labour, is a subject of distinct investigation. There is little doubt that for that object high meat dietaries pay. English navvies declare that they find 11 pounds of meat weekly necessary for good work.

GOVERNMENT GRANTS FOR STATUARY.

FROM an account of the sums voted in supply, in the House of Commons, in the years 1835 to 1863, both inclusive, we take the following figures:—The Nelson column is charged, during the above time, with the sum of 26,800*l.* In one year the statue of Charles I., at Charing-cross, cost 1,000*l.** In the same year, 2,500*l.* were granted for royal monuments in Westminster Abbey. An equestrian statue of George IV. is entered for 6,301*l.*; and the pedestal of Baron Marochetti's Richard Cœur-de-Lion, cost 1,650*l.* In the three years 1843-45, a total of 4,500*l.* was paid for monuments to Lords Exmouth and De Saumarez, and Sir Sidney Smith. In 1858, 20,000*l.* were voted for a monument to the Duke of Wellington. The Havelock statue at Woolwich is charged at 2,152*l.*; and on the shore at Scutari, a monument has been placed at a cost of 17,500*l.* In honour of Sir John Franklin, a statue has been raised, for which, in 1855, there is an entry of 800*l.* There is another entry of a similar sum in 1863.

Last in the statuary outlay is the sum of 50,000*l.*, granted for the late lamented Prince Consort's memorial, an amount to be added to the sum raised by voluntary subscriptions. There are a few other items, but we cannot be charged with national extravagance on this head: it is fortunate that in this country we have a strong voluntary principle existing.

* On Trafalgar-square, without taking the statuary into account, 31,600*l.* were expended.

FROM NAPLES.

SEVERAL years ago, a company began to work coal mines in Sicily and Calabria, but failed commercially, as the coal was incrusted with sulphur; and dividing the anthracite coal from the sulphur, as was done at the cannon foundry at Naples, made the undertaking more costly than profitable. Lieutenant-colonel Novi, after many experiments, has laid a memorial before the Academy of Sciences in Naples, showing that if to this coal be added a twentieth part of an artificial bituminous combustible, composed of asphalte of Ragusi (Sicily), the residuum from the distillation of petroleum oil and other similar ingredients, the prejudicial effect of the sulphur will be completely overcome. This discovery sprang from Col. Novi's seeing at Letto Manopello (Abruzzi) that during the casting of the mineral, sulphur, combined with bitumen, had not the least effect on the cylinders, whether of wrought or cast iron. He observed also that 100 kilogrammes of Newcastle coal proved equal in caloric heat to 120 of local coal, and that a cannon of 16 was completed in three hours with Newcastle coal, whereas with Cardiff coal five hours and a half were necessary; nor was the casting nearly so satisfactory.

These discoveries are of much political value. Awaiting the chances of war, it is highly essential Italy should well know her own resources. Apropos of cannon, it is proved the method of casting brass ordnance by means of moulds formed of sand of Montesarchio and Gaeta is far better than the method employed in France. Hitherto the extraction of bronze by the sand has been a great drawback; but a means of re-extraction has been found, which obviates that difficulty. Signor Justiniano Nicolucci has published "Popolazione dell' Italia nei tempi Anti-Storica." He proves that the people occupying Italy in the Stone epoch were of a craniological development differing greatly from those of the epoch of Bronze, as may be seen by their descendants in parts of Italy and Europe generally. The objects in flint and diorite described by Nicolucci have been found at Frosinone, Castelluccio, Sora, Campoli, Alvito, Colle S. Magno, Pontecorbo, Balsoranno. Signor Mortillot is making an exploration of Italy, in connexion with the principal archæologists, for the purpose of writing "The History of Humanity as gathered from Monuments."

SOCIETY OF FEMALE ARTISTS.

THE eighth exhibition of Works by Female Artists, comprises 253 pictures, partly in water-colours, partly in oil. It includes several very good drawings and paintings,—some excellent views of buildings and streets, by Miss Louise Rayner; flower and fruit pieces, by the Misses Lane, Miss E. Walter, and Miss Fitzjames; two capital contributions, by Mrs. Roberton Blaine; and others by Mrs. Dundas Murray, Mrs. Backhouse, Miss A. Burgess, Miss S. S. Warren, Miss M. Gillies, Miss Bouvier, and the Misses Swift,—and yet as a whole we cannot venture to call it satisfactory. It is not an exposition of what our female artists can really do, the best of them preferring to send their works to the Royal Academy and elsewhere, knowing that if the picture be good they have just the same chance of having it hung as a man would have. Miss Kate Swift's larger picture, "A Schewening Widow buying her Mourning" (194), like her similar picture at the British Institution, is very characteristic, and has one capital figure in it (the woman leaning over the counter); but, as in the other picture, too, the colour is dull and cold. We make the observation in the hope of leading a very clever young lady to take a less gloomy view of life. Near this there is a very good little picture, "A Danish Peasant dressing her Child," by Miss Neumann, of Copenhagen, which deserved to be on the line.

COMPETITIONS.

East London Bank.—Modest!—The directors of this bank, "limited" (either in sense or honesty), offer 100*l.* for the best design for a bank in Cornhill with the following conditions:—

"All designs and plans are to be considered as the property of the directors, and to be used by them as they think proper.

The directors do not bind themselves to adopt the selected plans, nor to employ the successful competitor as the architect to superintend the erection of the building; but in the event of the successful competitor being so employed the premium will not be payable."

This certainly surpasses anything that has yet been attempted by Competition Committees. The directors of this East London Bank, *limited*, actually propose to walk off with the whole of the designs that architects may be absurd enough to trust them with on the chance of one of their number getting half paid for the work he will have to do. The designs are to include all the fittings, counters, &c. &c., and an estimate, and all the drawings are to be made to a scale of *half an inch to a foot!* If the company be "limited," the desire of the directors to get enough for their money certainly is not.

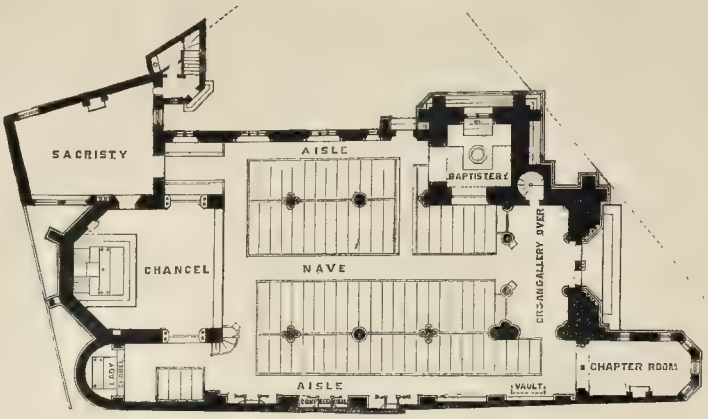
Since this was written, we have received more than a dozen indignant letters on the subject, so that we may hope the directors have overshot the mark, and will find their competition also, "limited."

St. Winifred's Well Improvement.—The committee have awarded the premiums for the above to the designs signed "Determination," by Messrs. R. Scrivener & Son, architects.

Holywell Market Hall.—The Local Board have awarded the premium to the design "Prince of Wales's Feather," by Messrs. R. Scrivener & Son.

Manchester.—Sir: The following printed instructions, among others, were given to the architects competing for the Manchester Cemetery:—"All the drawings must be finished in one uniform colour, either Indian ink, sepia, or neutral tint only," and we were informed that these instructions would be adhered to, The prize design is finished *entirely* in colours!—CIVIS.

Liverpool Greek Church.—The limited competition for the proposed Greek church has resulted in the selection of the design submitted by Messrs. Hay, who have been appointed to prepare the necessary working drawings. The design is in the Byzantine style of architecture, and is based on the old church of Theotocos, at Constantinople. It will be built of polished ashlar, on a corner plot of ground between Upper Parliament-street and Prince's Park-road. The plan consists of a narthex to the west, flanked by apartments and stair to the gallery, and surmounted by three domes. The body of the church will be entered by three doors from the narthex, and divided into nave, aisle, and transepts, on the plan of the Greek cross, with large central dome over the intersection. The eastern bays, or that portion which corresponds with our chancel and aisles, will be screened off by means of the iconostasis, and terminated by a central projecting apse, with small side ones formed in the thickness of the walls.



Leighton Buzzard.—The design of Messrs. Bellamy & Hardy, Lincoln, has been selected in a limited competition, for the proposed new Wesleyan Chapel, Leighton Buzzard, Bedfordshire.

DEATHS FROM FASHION.

THE injurious practice of tight-lacing has fortunately been somewhat abated, but during several years it sent thousands to an early grave: so has the style of female dress which exposed the wearers to dangerous attacks of cold; and more recently the fashion of wearing crinoline has been the cause of many deaths. On this point, Dr. Lankester has made a calculation, that in three years, in the metropolis alone, as many females have lost their lives by fire as were sacrificed at Santiago: this was an immense number, over 2,500; and a very large part of these deaths (like those at Santiago, in fact), are undoubtedly to be attributed to the practice of wearing expanded dresses, and the use of very inflammable materials. Many servants suffer in this way; and amongst the middle classes the small size of bedrooms often leads to mischief, for there is often not sufficient space between the furniture and the fireplace to allow the safe passage of a full-sized crinoline: in such cases fireguards are a necessity. Many lives might also be saved by the use of non-inflammable materials, which can be readily obtained. It is necessary again and again to urge the adoption of precautions against one of the most terrible deaths.

THE ANCIENT PORT OF ROME.

THE researches on the site of Rome's ancient sea-port (the modern and now inland Porto) have laid open several recognisable traces of that city's plan and its harbour; and, among art objects found there, one of the more valuable is the torso of a male figure, nude, which would in its completeness have stood between 10 and 11 palms high, wanting both arms, except a portion of one sufficient to show its upraised attitude. The anatomy and execution are so superior, that this statue has been deemed ascribable to a Greek chisel of some school when art was yet far from decline. The bas-relief, found on the same site, interpreted by Visconti as an *ex voto*, representing this sea-port, embellished by Trajan, and supposed to be seen in a kind of vision, has been criticised at the German Institute from another point of view,—Dr. Henzen assuming it to be designed simply for commemorating the return of a galley (one of the two manned vessels introduced among its complicated details) from a sacred voyage, *ex voto*, as undertaken in fulfilment of religious obligations; and the figure of a female near an altar prepared for sacrifice, he (the same German critic) supposes to be a portrait of Julia Domna, empress of Septimius Severus, to whose epoch, consequently, this marble must be ascribed, on the latter hypothesis. At a recent meeting were exhibited several antique objects and drawings from such;

ST. WILFRID'S (R.C.) CHURCH, YORK.—*Plan.*

some terra-cotta lamps, one bearing the names, in clear relief, "Hermes, Messalinæ," the latter probably that of the too notorious empress; drawings of three medals, bronze and silver, lately found near Crema and on the banks of the Volturno, their obverses and reverses exhibiting heads of deities, symbolic animals, and names of cities, the character of the heads being also conformable to the Oscan type.

THE WORKMEN'S CLUB MOVEMENT.

THIS movement spreads so fast as to indicate the fulfilment of a decided want of the time. Yet it seems to foreshadow a change of habits, as regards home influences, which requires careful consideration and guidance. Since we last recorded progress, several meetings have been held in the metropolis and elsewhere in furtherance of the movement, amongst which may be named one at Tooting, over which the Rev. C. Harris, the incumbent of Somers Town, presided, and at which the Rev. H. Solly, the secretary of the union, attended, and delivered an address, which was well received by a very good assembly.

At Poplar, also, in the Town-hall, a promising meeting has been held, in aid of the newly-established club at Bromley-by-Bow. Dr. Bowkett was in the chair, and the Rev. H. Solly addressed the audience. A conference has been held, at the offices of the union, of nearly all the secretaries of the London clubs; and, after tea, for several hours, the discussion of practical and important points was carried on with spirit.

A large and enthusiastic meeting has been held in the hall of the Holborn Union, for the purpose of endeavouring to form a working men's club and institute for that part of the borough of Finsbury within the Holborn District. The proceedings opened with the performance of a brass band, composed of working men. In course of the proceedings Mr. Solly, the Secretary to the Working Men's Club and Institute Union (of 150, Strand), spoke of the evils of public-house sociality, but said that these clubs were not intended for teetotal propaganda. No man would be called upon to give up his beer if he chose to keep to it, or his pipe, and the pipe would not be excluded from the club. Appropriate resolutions were passed in favour of the object in view.

A public meeting has been held at Redhill, for the purpose of promoting the Working Men's Club establishment there. Upwards of twenty names were given in for membership.

A meeting has been held at Birmingham Heath, for the purpose of confirming the preliminary arrangements for establishing a Workmen's Club for the district of Birmingham Heath and Smethwick. A report from the provisional committee stated that they had received an offer of land in Winson-street, containing about 1,500 square yards, to lease at a rental of 12*l.* per annum, with the power of purchasing at 8*s.* 6*d.* per square yard. Mr. Thomas C. Clarke, of London, architect, had offered his gratuitous service in preparing the plans and specifications of the proposed buildings, and Messrs. W. & J. Webb, builders, Birmingham, had furnished estimates for the proposed building, which they offer to erect for 588*l.* The committee recommended that a tender should be invited from some other respectable builder, and the lowest offer accepted. On receipt of this estimate it became evident that the proposed capital of 500*l.* was insufficient. The nominal capital of the company is increased accordingly to 1,000*l.*, of which only about 600*l.* will be issued at present.

At Rotherham, in the Mechanics' Institute, the provisional committee appointed at a public meeting, have met delegates from the various firms in the neighbourhood, to draw up rules for the Government of the Rotherham Working Men's Club and Institute. Nearly all the influential firms were present, and the various propositions submitted to the meeting were discussed. Mr. John Guest was voted to the chair, and a number of resolutions were carried.

The Lye Working Men's Institute, at Stourbridge—not a new club—have just held a *soirée*, in the lecture-hall of the Institute, under the presidency of Lord Lyttelton, who stated that the Institute had met with a fair amount of success compared with other similar institutions elsewhere. The annual report was read. According to it the year 1863 had been the busiest they had had. The subscriptions for working men had been reduced. This had led to an increase in numbers, but there had been slight pecuniary loss in the subscriptions. The literary and musical entertainments at the commencement of the year were successful, but circumstances had prevented more than one being given this session. The classes had not been continued, owing to want of teachers. The income had been 74*l.* 16*s.* 5½*d.*, and the expenditure 73*l.* 1*s.* 3½*d.* The average number of members had been 123. In 1862, the average was 94. The chess-room proved very attractive. The reading-room had been well attended. It was intended to try penny readings, cheap tea meetings, and cheap concerts.

In the Theatre Royal, Sunderland, a great public meeting, attended by upwards of 2,000 of the working-classes, has been held, to inaugurate the Working Men's Club and Institute of that town. The chair was occupied by Sir Hedworth Williamson; and one of the chief speakers was Mr. Lindsay, one of the borough members. The club, it was announced, was about to be opened to the public.

TENDERS.—The following remarkable tenders have been made for works advertised by the River Wear Commissioners, Sunderland. These surpass in wildness any others we remember of:—

Specification of Work.	Highest Tender.	Lowest Tender.
For the removal of the rock at the Narrows, to 12 feet below low-water mark	£18,062	£8,550
Do. do. to 10 feet	12,397	3,180
Do. do. to 8 feet	11,200	1,100

ST. WILFRID'S (R.C.) CHURCH, YORK.

WE present our readers with a view of this new church, one of the most important as to architectural character that has been erected by the Roman Catholic body for some years past. It stands in a commanding site, not many yards from the spot occupied in Middle-Age times by the ancient church of St. Wilfrid, and within a short distance of the minster, deriving all the advantage of the extensive opening formed around the latter structure. In itself, however, the site is of the most irregular form, and hedged in by buildings on two sides; but a church, 111 feet long by 57 feet broad internally, with various dependencies of vestries, side chapel, tower, and chapter-house, has been erected on it, affording great picturesqueness of outline. The tower rises to a height of 147 feet. The building materials are the flat-bedded Bradford wall stone, and Whitby dressings, with an extensive employment of Cumberland red sandstone in the shafts of windows, doors, &c. The whole is lined with brick.

The contract for the building is near upon 8,000*l.*, but the completion of the carving, the various fittings, stained glass, &c., will bring up the cost to 10,000*l.*

The architect is Mr. Goldie. Mr. Lewis is clerk of works; and Mr. Weatherley, of York, the builder. The stained glass, carving, decoration, and metal-work, are respectively in the hands of Messrs. Wailes, Earp, Castell, and Peard, all under the immediate supervision of the architect.

BRISBANE, QUEENSLAND.

A NEW Town-hall is about to be erected in this distant place. It will occupy a space of ground 138 feet by 95 feet, fronting on two streets, but closely built up to at the sides. In this colony they look at the profit aspect of every transaction, and the building is laid out with shops on the ground floor facing Queen-street (the principal front), and offices grouped round a central court, covered in the rear. A rental is expected of about 3,000*l.* a year, besides getting rooms for the corporation offices, and the large hall on the upper floor, 90 feet 6 inches by 42 feet 6 inches, and 30 feet in height. The staircase and the part of the building connected with it seem well arranged. The style of the exterior is Italian; the lower story and mezzanine rusticated, the upper story showing Ionic pilasters and seven Venetian windows between them. The elevation would be better without the portion of sham attic placed in the centre of the long front; the gable of the roof showing at each end. The cost is stated at about 20,000*l.* The amount of rental expected comes to us from one who must know, or we should suppose there might be an error. The architect is Mr. William Coote. The warm-hearted colonist who sends us the particulars says, in closing his letter, "May the *Builder* flourish as the best advocate of art we have ever seen here or are likely to see." A good wish that comes so far calls for recognition.

ST. WILFRID'S (R.C.) CHURCH, YORK.—Mr. Geo. Goldie, Architect.

THE SPIRIT OF GOTHIC ART.

"And there, how picturesquely tall above,
The moss-clad tow'r o'ertops the umbrageous grove;
While o'er its Gothic honours, hourly shed,
There, azure tints fantastic lichens spread."

MAN is the only animal that may be said to possess the power of aggregate existence: all other animals exist individually: the aggregate powers of any one of their classes remain without any material change. They may diminish or increase, according to the plan set forth by Darwin—by "natural selection in the struggle for existence," but their faculties remain ever the same. With man how different is the case? He not only makes observations and draws deductions from them, but he reasons upon the probable causes and finalities of those things which he observes, and communicates the knowledge so obtained to his descendants, and they carry the process still further—ever further, in what I may perhaps be allowed to call everlasting progression. Thus the experiences of ages furnish an accumulated and accumulating stock of knowledge, which man applies to his own use.

It therefore follows, that whatever tends to facilitate the communication of ideas, must have a direct tendency to exalt the human family. By these means, too, the famous dead ever live on our midst, and the great past in the living present! and so the immortality of man is distinctly shadowed forth in his works. Oh, what a power is that of the intellect of man; how vast the scope of his ken; how godlike in his majesty! He wends his way in the wind tracks of heaven, and walks in the depths of the vasty deep; he has described the mighty circles of science and the magic lines of art; subjected old earth to his power and girdled it with chains; he rides upon the sea-foam and makes the turbulent element to serve him. But where shall we stop? He measures the stars, their courses, periods, and revolutions, and has realized the fable of Prometheus, by extracting fire from the clouds. But all this progress has not been the result of hysterical starts, but rather of slow gradual growth.

Now, as the knowledge of the universe, so the knowledge of his own capabilities, in imitating what is around, above, beneath! Thus arose the arts, poetry, painting, sculpture, architecture, music.

As the cultivation of these, so their vast influence in aid of virtue upon the mind; and, as Horace truly says,—

——"Pictoribus atque poetis
Quidlibet audendi semper fuit æqua potestas."

The advance of art has not been produced by servile imitations and transcendental copyism, but by throwing off the trammels of what we moderns call "red-tapeism," and giving loose to the powers of the imagination; striving ever,—

——"To give to airy nothing
A local habitation and a name."

making ideal beauty the study, and selecting and arranging *all* those redundant beauties which are ever surrounding us.

Now, as of old, it is still important that the artist should ever be striking out new rules, according to the bent of his own genius, provided, of course, that his brain is not akin to that of Touchstone, "so crammed with observations, the which it vented in mangled forms." There is too great a tendency at the present time to pooh-pooh every new thing — new idea —new arrangement,—too great a tendency to consider that it is impossible to go beyond what was done some 500, 2,000, and 3,000 years ago respectively; as if a command had gone forth, "Thus far, and no farther, shalt thou go!"

It was not thus that present beauty was attained; for,—

"*Past* and *Future* are the wings,
On whose support, harmoniously conjoin'd,
Moves the great spirit of human knowledge."

The origin of the styles of art should, perhaps, be primarily attributed to climate and national habits, and not so much to religious differences as some imagine. Such differences may have guided, but not given birth to them. The religious feeling has in all time been the great prompter, which directed to their legitimate goal the finer aspirations after the loftier, the nobler, the more beautiful in art; therefore it is, that in the mundane dwelling of the Deity, we always find the completest development of artistic beauty. It is the same with the Jew, the Pagan, and the Christian, and rightly so too!

"There is nothing," says Baptista Alberti, "in which there ought to be employed more thought than in that of laying out and adorning a temple, not to mention that a temple well built and handsomely adorned is the greatest ornament a city can have, but is, moreover, the habitation of the gods; and if we adorn and beautify the house where a king is to dwell with all the art we are masters of, what ought we to do to those of the immortal gods, whom we expect, when we invoke them, to be present at our sacrifices and to give ear to our prayers! And, though the gods may despise these perishable things which we most highly value, yet men are moved by the purity of beautiful materials, and raised by them to reverence and devotion for the deity to whom they are sacred. It is certain temples may be of great use for stirring up men to adoration, by filling their minds with delight, and entertaining them with admiration of their beauty. Seeing that when the temples are most frequented religion is most honoured, I would have the temple made so beautiful that the imagination should not be able to form an idea of any place more splendid; and I would have every part so contrived and adorned as to fill the beholders with awe and amazement at the consideration of so many noble and excellent things, and almost force them to cry out with astonishment, 'This place is certainly worthy of a god!'"

Thus the Pagan thought, thus the Jew thought, and thus the Christian *has* thought, and probably is beginning to think so again. The Pagan idea was expressed in temples of no great elevation; generally without any windows, which in another style,

"Shoot down a stain'd and shadowy stream of light;"

and, moreover, usually without any roof, so that the light and air might play freely amid the long colonnades of the peristyle, the forms of which were pure and elegant, and the proportions exquisite.

The Jewish idea was expressed in a temple, likewise of no great elevation, and, for the most part, without roof, adorned with the most lavish and gorgeous sculpture and colours,—columns massive and strong, and with complicated arrangements, typical of the greatness of Jehovah, and the mystery of His nature,—shadowing forth the vastitude of His splendour and majesty, and the profuseness of His beneficent loving kindness. It was, in the words of its own laureate, "The perfection of Beauty,"—"Beautiful for situation and the joy of the whole earth." And though not a vestige remains,

—"There survives a tinge of glory yet,
Which, though the lustre of its day hath set,
Tells of the joy and splendour that hath been."

The Christian idea was expressed in those lofty temples whose turrets and pinnacles seem darting up towards God, as they stand out against the deep blue sky, like mystic open lace-work. The *Master* had ascended up on high, and so the grand art feeling of his servants could not but thither tend. It sought in the far-stretching vistas and "starry-pointing" spires to symbolise the ever-vanishing, ever approaching perspective of Eternity, and the communion between the Eternal and the human,—connecting heaven and earth by those "cloud-capped" spires whose fine-less points shadow forth the terminated course of man's supplication, and the source of his hope, and illustrating that bounteous mercy which ever flows downward, like "the precious ointment which ran down even unto the skirts of Aaron's clothing."

Thus, in the Gothic era, we have arrived at that interesting period when the new impulse of Christianity so greatly affected the world of art. The old mythologies, theologies, and idolatries had had their reign, and right glorious had it been. Beautiful exceedingly were the fictions of the early world: all the dark and mysterious events of life, and the marvellous phenomena of nature, were embodied and explained in their poetical and dreamy faith. And now they had passed away, those old-world dreamers. They have gone to the great hereafter, and the broken relics of their beautiful temples still survive, like wrecks upon the ancient sands of time: precious fragments which have escaped the sweeping dash of Time's ever-rolling sea. And as we wander upon the shores of that solemn soundless ocean, we hear ever and anon sorrowful sweet voices sighing up from the mysterious billows, and whispering, in tones of dull pulsating music, tales and legends of the olden time.

From the god-like *old* evolved the heaven-like *new*, which has literally entangled the imagination in the magical web of enchantment, recalling to memory the poet's description of the Grotto of Antiparos, with its countless glittering stalactites. Who is there who cannot exclaim with the poet—

"Oft enraptured have I loved to roam,
A long'ring votary, through the vaulted dome,
Where the tall shafts, that mount in massy pride,
Their mingling branches shoot from side to side;
Where Elfin sculptors, with fantastic clew,
O'er the long roof their wild embroidery drew;
Where superstition, with capricious hand,
In many a maze the wreathed windows plann'd!"

All art is symbolical, and none is more so than Gothic art. The proper display of purpose and the immediate expression of feeling are therein beautifully portrayed, the first and greatest of its objects being to express the elevation of holy thoughts—the loftiness of meditation set free from earth, and proceeding unfettered to the heavens. It is this finely-embodied Christian idea which at once stamps itself on the spirit of the beholder, however little he may himself be capable of analyzing his feelings when he gazes on these far-stretching columns and airy domes—

"Not for a prelate, nor a warrior's glory,
Nor pride of kingly throne;
For God—for God alone,
Were raised these sumptuous shrines, august
and hoary."

A complex inquiry into the origin of the Gothic art would, I fear, only serve to land us in complexity; therefore I shall but refer to some of the theories which have been put forward. It is generally admitted that Gothic art came to this country from France; but whether France or Germany have the priority in point of adoption or invention, I do not know. I think the first building erected in this country in the new style was that of St. Cross, at Winchester, about the year 1130. This was begun by Henry of Blois, after he became established in this country, he having previously been a monk at Clugny. It is the intersection of some circular arches in this church that Dr. Milner thinks gave rise to the Gothic art; but this is very improbable, when we consider that Henry must have been familiar with the Gothic erections of Clugny long before he left it.

A very singular theory has been advanced by some, I should fancy straight-laced Puritans, that for the first three centuries after Christ there was no such a thing as a church, as we understand the term, and that when it did arise it was the offspring of the Papacy; all forgetful of the fact that the surname of their own Bethels has a far more distinct connexion with the Papacy than the word church has. Now, Dr. Mead has most elaborately shown, from St. Austin, St. Basil, Jerome, Chrysostom, and a host of other well-known "early Fathers," that there were such places even in the first century. Moreover, Roman Pagan authors inform us of the same fact. It were, therefore, idle to go into the subject, the object being to prove that any barn is good enough for the worship of the living God.

One theory attributes the invention of Gothic art to the Ostro-Goths, the ancient inhabitants of Scandinavia, who, in the beginning of the fifth century, ravaged the fairest portions of Europe. Another theory makes the Saracens to be the inventors; a third, the Moors; a fourth, the Visi-Goths, the ancient inhabitants of Spain; a fifth, the Freemasons, artisans of all nations, who, during the Middle Ages, roamed from nation to nation, building castles, abbeys, monasteries, churches, and cathedrals. Probably, these men played no mean part in the perfection of the art, even if they were not the inventors.

Another fruitful source of inquiry has been,—What prototype suggested the art? Mr. Warburton suggests that natural groves supplied the primitive idea; the trunks, branches, and foliage of the trees being represented in pillars, arches, and tracery. Sir James Hall suggests that the whole style, in all its varieties, is but an imitation of wicker-work. Sir Christopher Wren considered that the Freemasons gathered the idea from the Saracens. Some German writers consider the idea to have been an imitation of the acute-angled ceiling of the Egyptian pyramids. Dr. Whittaker and many others tell us that the pointed arch was known and practised by the Romans, and was originated in cross vaults, as seen in the Palace of Diocletian, at Spalatro, in Dalmatia.

Such are a few of the "thousand and one" theories which have been advanced, and hotly contested, about the origin and invention of Gothic art. For Classic art there are numerous books of rules for our guidance; but, as for Gothic art, no such books have come down to us,—indeed, no such books appear to have been written. The art seems to have been the child

born of Christianity, in her desire to give expression to her wants and to embody herself in a material form.

The artists seem to have considered that greatness of extent and height, variety of forms, and fairy-like lightness, each and all suggested by the Christianity from whence the art sprang, and all combining to produce *majesty* and magical beauty, should be the chief end in view, and well did they succeed! The wondrous variety introduced into the art is truly magical; Genius alone could so invest it. Witness the matchless sculptures; slender columns, whose deep mouldings produce such beautiful shadows; niches filled with statues of prophets, apostles, saints, and benefactors to the church;—

"Figures that, with one broad glare, the gazer strike,—
Kings, bishops, saints, apostles, all alike.
Artist! 'tis thine, from the broad windows' height,
To add new lustre to religious light;
Not of its pomp to strip the ancient shrine,
But bid that pomp with purer radiance shine;
With arts unknown before to reconcile
The willing graces to the Gothic pile."

Nothing can be more beautifully suggestive than the ideas conveyed to the mind by the details of the Gothic art,—ideas calculated to soften the stubborn heart, to impress the wondrous loving-kindness of the All-Father, to cheer the melancholy, to raise and exalt the lowly, to teach the ignorant, and to keep before the minds of all the sublimest truths of the Christian religion. These seem also to have been the same, for the most part, in all the previous temple buildings, both Jewish and Pagan; yet it was only as the true light shone abroad on the earth that such allegorical teaching could have its legitimate import.

As Paganism grew old, it renewed its youth by allegory, until its mythological circumstances became philosophical emblems of life, death, the soul, and immortality. This was the utmost that the philosophy of Paganism could attain, and the wonder is that it ever attained to this. When Christianity had increased in the world sufficiently to form a body politic, and governed in every province by a regular system, then it appropriated many of the old pagan symbols; as, for instance, that well-known allegory in the catacombs, where Jesus Christ is represented as converting the world, under the figure of Orpheus playing on his lyre, and soothing the wild beasts, the trees, and the rocks. Indeed, nothing was more common in the early days of Christianity than to see rivers, cities, mountains, day, and night, represented as divinities. The god of the Jordan, for instance, resting on his urn, is present at the baptism of Christ. Immortality and the Resurrection, too, are shown, by Pegasus rising to heaven, attended by the goddess Victory; and sometimes even by Cupid and Psyche—Love and the Soul. Pegasus was the name of a poetical winged horse, generated from the blood of Medusa, who became transformed into a constellation.

On the tomb of St. Calistus, Christ is represented by Pluto sitting on the judgment-seat, with Mary, as Proserpine, attended by five veiled women, representing souls, one of whom has a tambourine, an instrument used in the Greek mysteries. Those five women are led by Mercury Psychopompus, conductor of souls, wearing his winged hat, with wand in hand, and tunic girt up. The origin of the worship or adoration of Mary is thus, I think, very significant.

If we pause for a moment to examine the human mind, we shall very soon perceive how strongly the love of the allegorical is implanted therein. It is a part of our very nature, and cannot by any means be dissevered from it. Language itself may be termed an allegory of the soul. The imaginative faculty, for which man is so pre-eminently distinguished above the other animals, is highly allegorical. The Great Teacher himself taught by its means,—nay, spoke of His own person and attributes by the most beautiful allegory. It is only allegorically that we know anything of the Eternal! The rhapsodies and pæans of Heaven, as far as we know anything of them, are significantly allegorical. The whole Jewish polity, from first to last, was one splendid allegory.

If, in imagination, we glance back afar, along the deep profound vistas of time, to the early dawn of the palæozoic age, and trace each geologic era as it evolved in the revolutions of eternity, down to the latest tertiary, and onwards to the human era, the senses reel, and become drunk with the profound grandeur of the allegory in each; pointing to, and centring in, Emmanuel,—and so onwards, to the culmination, when we shall reach to the divine,—the philosophic acme of our being! Is it to be wondered at, that in all time God has spoken to man, and by means of allegory made known His will? The last time such a communication took place, in Patmos, it gave the world a most sublime piece of allegorical writing.

There is, therefore, nothing remarkable, that symbolism is the very soul of Gothic art, seeing that, as man is constituted, all the results of his imaginative faculty must of necessity be symbolical or allegorical, for I use the terms synonymously.* FRANCIS DRAKE.

DRAWN STEEL TUBES.

MR. ALMOND, of Bermondsey, is reported to have patented a method of drawing steel tubes. We sincerely hope this invention will be perfected, pushed, and cheapened in every way possible, as "steel tubes" for house service water supply, in place of lead, will be in every way an advantage—in economy, in strength, in endurance, and in perfect cleanliness in use. Lead is costly, weak, and injurious with many waters. All soft waters dissolve lead, and the solution is poisonous. Wrought-iron welded tubes are used for water, and are cheaper, stronger, safer, and in every respect better than lead. But steel tubes, close in texture, smooth, and enduring, will form a perfect house-supply service. The use of lead should be abolished for water service for domestic purposes. Iron or steel cisterns and tanks may be made cheaper, lighter, and stronger. They are also more lasting.

THE SHAKSPEARIAN TERCENTENARY.

AT Bath, a public meeting has been held, the mayor in the chair, when it was resolved to celebrate the approaching Tercentenary by erecting a suitable memorial in the Victoria Park; by founding a permanent scholarship in Bath; or that failing, two scholarships of 30*l.* a year at the Universities for three years; and by dramatic readings at the Guildhall and other places. Mr. Chute, in a letter to the mayor, has announced his intention of producing one of Shakspeare's plays at the theatre. An amusing episode occurred at the meeting. George Davis, better known, it seems, as "Shaving George," announced himself as an admirer of Shakspeare, and suggested the establishment of an asylum for decayed washerwomen in Bath, as a memorial to Shakspeare. George has evidently some very confused ideas about an incident in the "Merry Wives of Windsor."

At Birkenhead, on Monday in last week, a deputation from the local Literary Society waited upon Mr. W. Hind, the chairman of the Birkenhead Commissioners, to request him to call a public meeting to arrange for the celebration of the Tercentenary. Mr. Hind said he could not officially call the meeting, but he would be very happy to take the chair at a public meeting in the town hall. The deputation thanked Mr. Hind, and intimated that they would call a public meeting.

The Liverpool programme, of which we have already spoken, has now been so far matured that the committee have issued advertisements intimating their desire to establish a Literary and Dramatic Fund in Liverpool for the benefit of authors, actors, and literary men; and that in aid of this fund a grand Shakspearian *soirée* will be held in St. George's Hall on the 22nd of April, with a promenade concert of Shakspearian music, exhibition of illustrated editions of Shakspeare's works, and allegorical Shakspearian tableau. Mr. Copeland, it is also announced, has placed his theatres at the disposal of the committee, for a morning performance at the Theatre Royal on the 23rd April, and at the Amphitheatre for an evening one, in aid of the Literary and Dramatic Fund. The mayor's costume ball and free theatrical entertainments are of course in addition to the committee's projects, but in complete harmony with them, and the mayor also gives the general committee his best support as chairman.

The Carlisle Council have received a circular from the Stratford Committee, asking their co-operation in the celebration of the tercentenary. The mayor announced the fact, and also that he had received a similar letter from the Carlisle Mechanics' Institution; but his worship intimated that such proceedings were not at all in accordance with his views of things, as he was not a Shakspeare man: on which Mr. Hardy remarked, interrogatively, "You would not like to have a Shakspearian part to represent?" to which the mayor responded in the negative. Mr. Perring, however, suggested that he might take the part of Justice Shallow. A motion appointing a committee to consider what steps, if any, should be taken, was agreed to by all but two dissentients.

The Bristol Workmen's Club, in College-place, propose to celebrate the tercentenary on the 23rd April, by a tea-party and a *soirée*, at which will be rendered selections, musical and elocutionary, from the Shakspeare tragedies and comedies.

Why does not the London Committee advertise for subscriptions? A strong local committee has been formed in Islington.

Shakspeare Celebration in Germany.—It has been resolved in the artistic circles of Dusseldorf to celebrate the 300th anniversary of the birth of Shakspeare by a great festival. Already it has been arranged that the proceedings shall last for two days, during which scenes will be performed from some of Shakspeare's works: there will be a concert, in which much of the "Shakspeare music" will be performed; and *tableaux vivants* will be arranged by German artists from Shakspeare's works. The Malkasten Society have undertaken to superintend the carrying out of the various propositions.

SANITARY PROGRESS.

PUBLIC PARKS.

Sunderland.—The Corporation pay 1,000*l.* per acre for 10 acres of land to add to the public park in the borough. The money will be raised on security of the local rates. One penny in the pound during thirty years will repay capital and pay interest.

Everton.—There is a movement to obtain a public park here. A meeting of the ratepayers of the township of Everton has been held, to take into consideration the propriety of the Corporation purchasing land known as the Mere House Estate for a public park. Mr. J. R. Banks, of Beacon-lane, who presided, said he had taken the responsibility of convening the meeting himself, although he was but an obscure resident of the township, because he thought the large and growing population of Everton required a place of public recreation, such as Wavertree and other townships had. Mr. Herdman said he had ventilated the subject of a public park for Everton in the papers on several occasions. Some conversation ensued, and it was suggested that while signatures were being obtained to the petition, Mr. Jeffery, Mr. Stitt, and Mr. T. D. Anderson should be invited to attend a future public meeting, and that a co-operation should take place with the committee formed with the same object at the Everton Church Schools. Eventually the Chairman and Mr. Herdman were appointed a deputation to confer with that committee as to future proceedings.

Oldham.—The Corporation have purchased 65 acres of land within one mile of the town-hall, and are now forming the same by the labour of distressed cotton operatives. Land, buildings, and labour will cost some 27,000*l.* The money has been obtained under the powers of the Public Works Act. A rate of one penny in the pound spread over thirty years will pay interest and repay the money borrowed.

Hulme, near Manchester.—Endeavours are being made to obtain a public park here, to be paid for by a local rate.

Bolton.—The public recreation-grounds are to be added to by a local rate.

Lancaster.—Part of the moor is being enclosed and laid out as ornamental grounds for public use.

Blackburn.—The Corporation here are also improving their beautiful park.

The park movement, we are pleased to learn, is on the increase.

Maryport.—By sure and stealthy footsteps the fever, which for some months past has been doing its work of death in Whitehaven, has effected a lodgment in Maryport. Diarrhœa had previously prevailed, and is still prevailing, to an alarming extent, in most families of the town, and it is now visited by a low intermittent fever. Small-pox has been rife in the neighbouring villages of Ellenborough, both among children and adults

* To be continued. We are not to be understood as necessarily agreeing in all the writer's views.

has not been, however, of a very malignant haracter. A correspondent of the *Carlisle ournal*, says it is not very long ago since the uthorities here were warned by the public press o take precautionary measures to meet and ard off, as far as human means were available, is fever's approach. A dozen pigsties were, in onsequence, emptied, a few middens removed, nd lime and the brush applied to some of the nlest of the courts. But this was all. No pro- sion has, as yet, been made to supply the nants of small houses with the most necessary nveniences. Water works have again been *oken of.*

Cambridge.—The purification of the Cam forms ne subject of a report by the town surveyor, r. R. R. Rowe, C.E. In this report he says :— he river has not been thoroughly dredged for any years : it contains a very large quantity f foul mud and organic matter, which ferment nd give off unwholesome vapours in hot eather. Although the Cam is called a river, s waters are held up by locks, so that it is more ke a canal than a river. The sewers which ischarge into the river have their mouths placed elow the navigation level; but the velocity of ne stream is not sufficient to produce any scour the river-bed : a large proportion, therefore, f the solid constituents of the sewage remains the river, and forms pestilential mud-banks ear the mouth of each sewer. If all the sewage f the town be discharged into the river at or elow Barnwell Pool, the river above Jesus-green nice would be purified; but the concentration f the nuisance at one point would make the ver too foul for boating as a healthy exercise, for recreation on its banks : therefore it would e desirable to deodorize the sewage before it nters the river. It would be necessary, for this urpose, to inclose a portion of Sturbridge ommon (say not less than two acres), and construct thereon the necessary works. he report states that the rate of mortality the town is at the present time upon the ncrease.

Tamworth.—The town council have passed the llowing resolution on considering the sanitary ondition of the town :—"That the council ex- ress its willingness to give the subject the llest and most attentive consideration, and to rry out such measures either by the adoption the Local Government Act, if required, or herwise, as may be deemed necessary or ad- sable." The town clerk was requested to btain information as to the working of the Act om other towns in which it had been adopted, nd the expenses connected with it.

Yarmouth.—At a recent meeting of the town ouncil, attention was drawn to the state of the ol, which is said to be in a shocking condition. one room, 13 feet square, which was occa- onally used as a school-room, eight persons ere crowded at night. Barrack accommoda- on for soldiers is 600 cubic feet to each man, orkhouse 300; but in Yarmouth gaol it is only 0. A medical man in the council (Mr. Aldred) xpressed it as his opinion, that, if an epidemic oke out in the town, the consequences in the ol would be of the most fearful character. He oved that the Gaol Committee take the neces- ry steps with a view to imprisonment in the unty gaol of all persons sentenced for three onths and upwards. After some remarks from e mayor, who said that the reports of her ajesty's inspector and of the gaol surgeon owed that the prison was in as healthy a state other gaols, the motion was carried.

Kimbolton.—A public meeting has been held ere, to consider the sanitary condition of the wn and adopt measures for its improvement. he Duke of Manchester was in the chair; and solutions were passed, almost unanimously, as the necessity of improvement, and that plans nd estimates should be prepared, to be laid efore a future meeting. A committee was ap- ointed, and the parish officer will procure lans, &c., for the next meeting.

Worcester.—Typhoid fever and scarlatina are id to be rife in this city. A correspondent of he local *Herald* suggests that want of proper entilation of the sewers, as by means of shafts, ay be to blame. The *Herald* starts the ques- on whether the drainage or soakage, or by hatever other name it is called, of every house, the major part thereof, has been directly or directly connected with the main sewers ? and not, why not ?

Preston.—From the usual report of the borough ngineer, Mr. John Newton, C.E., to the corpora- on, it appears that the deaths recorded in 1863 umbered 2,142, and the births 3,388; the for- mer being in the ratio of 25·25 per 1,000 of population living, and the latter 40.

The average death-rate for the period 1838 to 1861, per 1,000 of population, was	29·65
Ditto for the year 1862	28·43
Ditto ditto 1863	25·25

These figures show a saving of 269 lives in 1863, as compared with 1862; and 374 as compared with the average of the preceding twenty-four years. This result, continues the report, is the more remarkable, when it is considered that in each of the ten registration districts in which England is divided, the rate of mortality was higher in 1863 than in 1862, and higher also than the average of the ten years, 1851 to 1860. Whilst the principal towns in the kingdom show an increase during the first quarter of one death per thousand of population, Preston exhibits a decrease of nearly seven per thousand. In the second quarter, the principal town districts show an increase of nearly two per thousand, whereas Preston exhibits a saving of upwards of six per thousand. In the third quarter the difference is less; and in the fourth, a slight increase is observable in Preston and town districts generally, over the preceding averages. The saving of life in Preston during the past year was not confined to one age; but as respects infants, while, in good times, two out of every nine born in Preston die before they reach the end of the first year; in 1863, the rate has been only two out of eleven. It is more than probable, the reporter thinks, that the additional time and attention which many mothers have lately been enabled to devote to their infants have effected this satisfactory result. It is likewise probable that out-door exercise and employment have tended to improve the health of the adult working population, notwithstanding the privations which a scarcity of factory labour has entailed upon them. The quantity of food, too, requisite to health is not so great as many imagine; and probably excess both in eating and drinking, in "good times," has added not a few to the bills of mortality in such times.

Carlisle. — In consequence of the outbreak of fever in the locality of Thomson's-court, Fisher-street, and Nixon's-court, Annetwell-street, the surveyor and inspector of nuisances have reported on the sanitary condition of these places. On examination they were led to believe that the fever had been generated by the unwholesome condition of the interior of the dwellings, arising in some measure (particularly in one house, where the most cases occurred) from the lowness of the ceiling and the closely-confined situation of the houses, but more particularly from the uncleanliness of the people themselves. The inspectors concluded their report by suggesting the application of the 60th section of the Public Health Act, which provided for the cleaning, lime-washing, and purifying of such houses for the purpose of checking infectious and contagious diseases.

Brierley-hill.—The ratepayers are about to decide by vote whether the proposition to apply the Local Government Act to the township shall be carried. There is considerable opposition. That there is a necessity for improvement in the locality no one who has ever walked through the unpaved and undrained streets, and visited some of the wretched tenements, can deny. There is no adequate sanitary provision for the inhabitants, no water supply, no drainage, no local government; and it is not improbable that if the proposed application for the local Act be refused, the introduction of authority from a distance will be the result. The ratepayers should think well before deciding a matter so important to the health and interests of the township.

EVERY MAN HIS OWN LANDLORD.

IT is universally admitted that health, morality, and domestic comfort are greatly dependent on the kind of houses the people live in. The denizens of the confined courts and alleys of all our large towns are confessedly the least healthy, the most liable to nervous forms of disease, and the shortest-lived of our population. The overcrowding, the absence of pure air and light, and of requisite sanitary requirements, sufficiently account for this. It is also equally obvious that a high tone of moral feeling is incompatible with the physical deterioration thus induced. In the absence of sound bodily health and purity of life there can be no real domestic happiness. Whoever, therefore, would benefit his fellow-man by improving his condition and circumstances, must bear in mind that this can only be done effectually by teaching him to respect himself—that with himself it greatly rests whether he and his family shall be healthy and happy. The diffusion amongst the working classes of this country of a knowledge of the physical laws of health and moral well-being, is the first great step to their improvement. Next to this rank those institutions having for their object the founding of improved dwellings for working men; and in the carrying out of this object we should endeavour to show them that this may and ought to be their own work, and that it is part of our plan to make them, if not altogether independent of extraneous aid, as nearly so as possible. Every man values that most which is his own, and takes a just and wholesome pride in it. The upper and middle classes may lend them aid to establish workmen's clubs and co-operative stores; but these to be really efficient for good must secure the active endeavours of the people themselves. The movement may be begun for them; but they must work it out and make it their own. Acting on the principle of co-operation, stores have been established for the sale of furniture, household goods, and clothing, and in the same way ordinarily well-to-do artisans might become the proprietors of their own dwellings. In furtherance of this object, the Durham County Building Society, established in Sunderland, have a scheme for the purchase of workmen's houses by the payment of a rent. In accordance with this scheme, a range of cottages has already been built in that town, and arrangements are being made for its further development in other places in the neighbourhood. The scheme seems a feasible one, and therefore we bring it under the notice of our readers. The details are taken from an explanatory statement published by the society, and which formed one of the Social Science papers. It is described as,—

"A scheme to enable a man to purchase a house with its own rent; or, in other words, by paying the rent of a cottage for twelve years either in one sum or in instalments extending over the twelve years, or whatever period within that time he chooses, the occupier may become the veritable owner of the cottage. And for the payment of the sum of 25*l.* more, payable in the same way, he becomes the owner of the land, which is freehold. You will perceive that the advantage of this scheme is that the person wishing to purchase is put into immediate possession of the house. He is not paying rent for one and striving to save to buy another. The house is his—he lives in it, he is buying it—by instalments. The price is a mortgage, and it and the interest are paid back by weekly payments. I append a table showing this :—

Annual payment to Society		£9	15 0
Repairs, insurance		0	10 0
Ground rent		1	5 0
		£11	10 0
From which deduct amount which would otherwise have to be paid as rent for a similar house		£8	9 0
Excess of annual payment		£3	1 0
Which multiplied by 12 years and 9 months, will give		£38	17 0

as the cost price of a house valued at £85.

This 85*l.* included all expenses for the purchase, including deeds, road making, drains, &c.

The terms upon which these cottages were offered to working men being something extraordinary, we will explain how this was accomplished. By building the entire number together a saving just less than 25 per cent. was effected, of which the purchaser got the entire benefit. The principle is that of buying wholesale and selling retail at the wholesale price. The payments required of a purchaser are 7*s.* 6*d.* per fortnight, thus taking a term of 12 years and 9 months to discharge the property from the purchase money and interest. But purchasers are not limited to these payments, and therefore the more they pay the shorter will be the duration of the payment. Considering these cottages were worth 3*s.* 3*d.* a week rental, the additional payment required of the purchaser was only 1*d.* a week, including ground rent, showing an investment equal to 15 per cent. The time may seem long before the purchasers would be clear of their payments, but how many for twice that period would be paying the same amount as rent, and yet be no nearer adding a cottage to their possessions than when they first began housekeeping.

I will now endeavour briefly to describe these superior cottages, so as to give you some idea what they are like; remarking, however, that the scheme is equally applicable to the construction of houses on a larger scale, which can be built at a less proportionate expense than even these. The plot of ground on which each cottage stands has a front of 19 feet 6 inches, by a depth of 56 feet. The construction and internal dimensions are as follows :—The foundations are run in with asphalte, and have a layer of slates between the rubble and the bricks. The outer works are hollow, so as to prevent the possibility of being damp. They are pointed and tucked. There are stone heads and cills to the windows, and the door frontispiece is wood painted. The spouts project, and rest on neat ornamental brackets. The roof is slated with Welsh slates. Great care has been taken with the flues, so as to prevent smoking or down draught, and the fireplaces of two adjacent houses are placed back to back. The windows open both top and bottom, and are 6 feet 6 inches high, by 3 feet 6 inches wide.

Internally there are three apartments In some of them a passage has been taken from the front room, which to that extent abridges its size, and slightly the bed-room also. Generally, however, the front door opens into the room. Where there is a lobby, the room is 15 feet

2 inches by 13 feet 6 inches, the height being 9 feet 6 inches, which is the height of all the rooms. This room is fitted with a registered stove, ornamental composition mantel, a dwarf cupboard in each recess, and is cornieed. The kitchen, behind this room and communicating with it, where there is no passage, is 14 feet 6 inches by 12 feet 6 inches. It has stone jambs and mantel, with large oven, high cupboards, and other convenient fittings. Opening from the kitchen there is a smaller room, without fireplace, 10 feet 8 inches by 6 feet. This is always used as a bed-room,* and generally the front room also. There is a pantry in the yard, 5 feet 9 inches by 5 feet 6 inches, with a nice porch between it and the kitchen, giving access to a garden yard, containing coal-house, ashpit, sink, water-closet, and a recess for a water-butt. This yard, with flower-plot in the centre, is properly drained, and opens upon a well-paved back street.

The floors of all the rooms are raised 1 foot 6 inches from the ground, and laid with inch and a quarter flooring, square-jointed, laid on sleepers. There are architraves to all the doors, and each room is skirted. Every care was taken that the wood was dry and well seasoned, and that the plaster was well tempered. The doors are all grained, and the front-room mantel marbled. Such is a general description of our model cottages; and I may now ask,—If Sunderland can do this, why not any town in the kingdom?'

The question is a most pertinent one,—Why not?

RAILWAY MATTERS.

IN the House of Lords, on the 25th ult., the Earl of Derby presented a petition from the ward of Bishopsgate, praying their lordships to protect them against the inroad of nine new railways. The North London line had already taken four acres and a half, and had deprived more than 4,000 persons of their abodes. These nine schemes would require no less than twenty-three acres, or more than half the whole area of the ward.

At a meeting of the proprietors of the Thames Tunnel Company, resolutions have been passed confirming an agreement with the East London Railway Company, which provides that the tunnel should be sold to the railway company for 173,600*l.*; and that 100,000*l.*, being part of the purchase-money, should be paid to the Public Works Loan Commissioners in discharge of the debt of 250,000*l.* due to them from the Thames Tunnel Company. If the railway company should pass their bill through Parliament, they will require the tunnel in two years.

Mr. Dickson, a railway contractor, has obtained 207*l.* damages against the Vale of Neath Railway Company, in consequence of sparks from an engine of the company having destroyed a quantity of railway sleepers, near the line over which the engine ran.

A strike among the railway "navvies" at Pensford (Cardiff), for the short Saturday, has given rise to considerable excitement. A meeting is understood to have taken place between the parties, but without any terms having been arrived at.

The traffic receipts of railways in the United Kingdom amounted, for the week ending the 13th of February, on 11,161 miles, to 535,706*l.*; and for the corresponding week of last year, on 10,758 miles, to 499,416*l.*; showing an increase of 403 miles, and of 36,290*l.* in the receipts.

A new series of experiments has lately concluded those made on the steep inclines of the Crawford and High Peak Railway, which are considered to have proved the practicability of working locomotive engines and trains over the pass of Mont Cenis. These last trials have been made in the presence of the Chevalier Biglia, special commissioner of the Italian Government; M. Desbriere, delegate of the Victor Emmanuel Railway Company; and a considerable number of English and foreign engineers of distinction. The gradients were 1 in 12, and 1 in 13; and the curves of 2½ and 3½ chains radius. The adhesion required for ascending these steep gradients, and for controlling the descent of the train, and moving on sharp turns or curves, is obtained, as we have before said, by the pressure of horizontal wheels on a centre rail, these wheels being attached to the engine, and worked by an additional pair of cylinders. The experimental engine dragged up a load of 24 to 30 tons, consisting of four waggons, at a speed sufficient to secure the passage of the mountain, a distance of 48 miles, in four hours, by trains carrying 100 passengers each. It is proposed to lay the rails on a portion of the public road, protected, where needful, from avalanches and snow-drifts by a covered way. By this means, railway communication may, within two years, it is calculated, be established between Italy and France, as well as the north and west of Europe, and continue until the opening of the grand tunnel of the Alps. The time estimated by the Italian Minister of Public Works for the completion of the tunnel is 11½ years.

The Civil Tribunal of St. Etienne has condemned the Mediterranean Railway Company to pay the following indemnities to the widows and families of three persons who were killed by accident at Fouillouse; 50,000f. to the widow, and 20,000f. each to the two children, of M. Sablière, a partner in a trading firm; 50,000f. to the widow, and 10,000f. to the daughter, of M. Heurtier, a retired *avoué*; and 800f. a year for life to the widow, and a capital sum of 6,000f. to the daughter of M. Montagnon, an artisan.

* There is a great objection, however, to this small room *without a fireplace* being used "always" as a bedroom. It is surprising that such rooms should be planned or tolerated.—ED.

THE ARCHITECTURAL MUSEUM: SOUTH KENSINGTON.

IN our last volume (p. 526), we printed a report submitted to the Department of Science and Art, at their request, by the council of the Architectural Museum, on the formation of a National Museum of Architecture; appending to it a note reserving an opinion, as we felt compelled to do, on some portions of it. The council of the Architectural Museum have recently printed the correspondence that grew out of the report; and if we thought its further publication would advance the desired object, we should, of course, reprint it, having that object greatly at heart. It does not seem to us, however, that this would be the case. If the desire had been to give the authorities of South Kensington good grounds for disconnecting themselves from the endeavours of the council to obtain a National Museum, the report could not have been more happily framed.

On Tuesday evening last, the first lecture for the present session was delivered in the theatre of the South Kensington Museum, by the Rev. J. M. Neale, M.A. Subject—"The Influence of local Scenery on local Architecture." The chair was occupied by Mr. J. G. Hubbard, M.P.

BRITISH ARCHÆOLOGICAL ASSOCIATION.

ON the 24th of February, Mr. N. Gould, V.P., in the chair, Associates having been elected, Mr. Burnell exhibited fifteen brass pins, varying in their lengths, stated to have been found arranged on the paper as shown, in a cellar on the northern banks of the Thames, in excavating for the South-Eastern Railway bridge. They have solid globose heads. Mr. Cuming also exhibited two exhumed from the Thames some years since, the heads of which are spiralwise, and quantities have been at various times obtained along the banks of the river, some measuring upwards of 1 foot in length. They were used in securing the wide-spreading head-dresses of the Middle Ages. An interesting discussion onsued in relation to pin-money, and the statutes referring to these articles. Although Stow assigns their first manufacture in England to the year 1543, the mention of them occurs as early as 1483, in our statutes. Parliament made several enactments respecting them and the pinmakers. On London Bridge, according to Pennant, most of the houses were tenanted by pinmakers, and ladies were wont to drive thither from St. James's to make cheap purchases; hence, probably, the quantity of early pins obtained from the Thames in this locality.

Mr. Irvine made some remarks upon, and exhibited drawings of, a very singular font at Melbury Bubb, Dorset, presenting sculptured figures of various animals. In the discussion that ensued, an opinion seemed to be generally entertained of its originally having been a portion of a Roman column of debased character, and the site on which it was found was formerly occupied by the Romans.

Mr. Cuming read a notice of a "Seal of the Grammar School at Crewkerne," hitherto undescribed, and not in use. The Latin legend is defective, and the seal appears to present the elevation of some structure no longer existing, or it may be an arbitrary design, or the quaint idea of some fanciful engraver.

Mr. George Wentworth, of Woolley Park, sent a paper "On Heath Old Hall," near Wakefield, accompanied by a photograph of the building, the history of which he traced from authentic documents in the possession of Col. Smyth, M.P. It was erected by John Kaye, a son of the heiress of Dodsworth, from whom it was purchased by Dame Mary Bolles, who was created a *baroness* in her own right. In the civil wars it is known as the place where the night before the taking of Wakefield by Sir Thomas Fairfax, May 21, 1643, General Goring and other officers had been spending "a very jolly evening," playing bowls, &c., and getting so intoxicated as to be incapable of attending to the defence of the town upon the approach of the enemy.

Mr. Cecil Brent produced a curious and extensive assemblage of articles obtained from the site of the old Steel-yard, consisting of bone pins, styli, spatulæ, and other Roman antiquities in bronze, together with some curious iron keys. The bronze objects were of a brilliant golden hue, derived from the damp soil in which they had been buried for probably not less than eighteen centuries.

Several letters were read relating to the congress at Ipswich, to be held in August next, with the co-operation of the Lord-Lieutenant of Suffolk and the Bishop of the diocese.

NEWS FROM SCOTLAND.

Perth.—New works are in progress at the general station. These at present consist of excavations on two sides of the station—on its east and west sides. Those on the east side have for their objects, among others, the formation of a street running from the area in front of the station into Leonard-causeway; the formation of another street running at right angles into that street from Leonard-street; and thus laying open the ground to the west of the Leonard-street feus, known as M'Leish's gardens, for feuing purposes. The excavations to the west of the station, between it and the New Town feus, are completed, their object being to enable goods trains to pass and repass without going through the station.

Dundee.—A report to the Harbour trustees, by Mr. Abernethy, C.E., with plans, recommends the enlargement of Camperdown Dock, and the widening of its entrance lock to 70 feet, so as to admit a very large class of vessels; the completion of the Victoria Dock; a new graving dock; the erection of hydraulic machines for loading and unloading vessels; to remove the Beacon Rocks in the river, and straighten the sea wall, in order to prevent silting. The expense, exclusive of removing the rocks, is estimated at about 210,000*l.*——The Baxter School, opposite the north-east corner of the High School, has been completed. The building is in the Gothic style, and has been erected by the Misses Baxter of Idvies, as a school for the tuition of the children of Mr. Lang's congregation. It contains three class-rooms, a large and two smaller ones. The large room is capable of accommodating 150 pupils. The walls are lined with stained pine, and the roof, which is an open one, is supported by ornamental rafters of the same wood. The dimensions of the room are 44 feet by 28 feet. One of the smaller apartments, a room 13 feet wide by 14 feet 10 inches long, is intended for the girls' sewing class, and the remaining room is for an advanced class. The last apartment is 17 feet long by 12 feet 6 inches wide. The architect was Mr. Macgregor, of Edinburgh. The masonry was by Mr. Sheach, the woodwork by Mr. M'Conochie, the slating by Mr. Balbirnie, the plastering by Messrs. Geekie & Son, the smith's work by Mr. Wagner, the plumber's work by Mr. Thomson, and the painting by Mr. Fairweather.

Glasgow. — The foundation-stone of "the Church of the Christian Union" congregation has been laid in East Howard-street. The lower story, occupied chiefly by lobbies, staircases, halls, vestries, &c., presents externally a Roman front, of which the most conspicuous features are the doorway and two double windows, all with plain semicircular arches. Internally, the church will be arranged pretty much on the ordinary principle: the galleries will overhang a little, and the pulpit will occupy a raised platform. Space has also been reserved for an organ, if required. But the principal ornament will be the pulpit window—a triple arch, with canopy of pale blue glass, interspersed with white foliage, the whole to be flanked with decorated pilasters. Below the street level there will be extensive cellarage.— —The Glasgow Archæological Society had a meeting recently in the Religious Institution Rooms, when Mr. Smith read a paper on the geological bearings of the question as to the antiquity of the human race; and Mr. Joseph Irving, of Dumbarton, one on the origin and influence of burghs in Scotland.

Baillieston, near Glasgow.—A new church, for the United Presbyterians, has been erected at Baillieston. It is in the Gothic style, is 65 feet long by 45 feet broad, and contains between 400 and 500 sittings. The principal elevation fronts the Glasgow and Coatbridge-road, in which there is a large three-light window, with ornamental tracery on the top. The church is surmounted with a spire 70 feet in height. The whole of the woodwork is varnished. Messrs. R. Laidlaw & Son, of Glasgow, as a donation, agreed to do the gas-fitter work free of charge. The church is heated with hot-water, the apparatus for which was supplied by Messrs. Laidlaw. There is a large hall, adapted for lectures and other public meetings, at the back. The vestry and session-house are underneath the hall. The buildings were erected from designs by Mr. Spence, of Glasgow, architect. The inspector of works was Mr. James Crow.

Castle-Douglas.—Mr. Barbour, architect, Dumfries, has submitted a report to the Commissioners of Police, Castle-Douglas, relative to the drainage of that place. It says, "Nearly the whole of the ground on which the town is built has a considerable inclination towards the loch. The drains will therefore have to run in that direction. There are only two possible outlets—the loch, or the lane from the loch to the river Dee. The loch would be the least expensive, and the quantity of sewage from the town would, for a considerable time, be so small as not to affect the purity of the water: it would, however, I think, become objectionable. As the additional expense of conveying the sewage to the lane, at the point where the railway bridge crosses, will not be great (200*l.*) in proportion to the whole undertaking, and as it will thereby be discharged into running water at a greater distance from the town, I propose to convey it to that point. The fall of the main drain will not be great (about 1 foot in 120 yards), but it will be sufficient. The sewage will be discharged into the lane, 8 feet below the surface of the water, so that the whole will be carried to the Dee, and little if any of the *débris* will rise to the surface." Mr. Barbour estimates the cost of the drainage, as shown on the plan, at 1,427*l.*

Dunse.—The house accommodation of this town being too limited for increasing requirements, and Colonel Hay, of Dunse Castle, having agreed to grant feuing sites on moderate terms at each side of the road leading to Berwick, an impulse has been given to the building of houses, chiefly by the better-off portion of the working classes for their own occupation. Last year, a number of houses, principally of two stories, designed in a plain style, but of a convenient character, were built; and this year a number more, of a rather superior class, are in course of erection. A new manse for the parish minister is also approaching completion. Its site is close to that of the old one, the materials of which have been used in the new building. The gross cost of it will be somewhere about 1,100*l.* The mansion-house on the estate of Langton, in this neighbourhood, has for several years been in the course of being rebuilt and extended. It is now nearly completed.

Galashiels.—The state of sanitary matters in this town does not seem to be satisfactory. The *Border Advertiser*, in an article on the subject, says:—"The drainage and water schemes, the bridge at the level crossing, the shutting up of the 'abominations of cesspools,' the arrangement with the water company for fire-plugs in cases of fire—in short, almost every reform our municipal rulers have projected has been an abortion. The town is well lighted and provided with footpaths; its streets are, in general, kept well cleansed; and this is the sum total of the fruits of some twelve years' labours. The latest project in the way of reform was the erection of fever wards, and for a short time the scheme presented every prospect of terminating as the committee desired. Its history was that of every other scheme manufactured on the same premises. The resident magistracy have the power to decide whether any particular case of overcrowding brought before them is a nuisance, and have the power to order its removal. Why have not the Sanitary Committee operated in this direction? There is an abominable open drain running down the back of Overhaugh-street, and the committee might do worse than consider the expediency of rectifying it."

Archæological Discovery at Drumlanrig.—The Duke of Buccleuch recently gave orders for excavating the huge green mound known as Tibbers Castle, near Drumlanrig, with the view of ascertaining whether any remains of interest might be discovered. Accordingly a number of workmen, under direction of the clerk of works at Drumlanrig, have laid bare the foundations of a building of great extent, the hall being 90 feet by 26 feet. Underneath, a dungeon has been discovered, in which were found bones, several silver spoons, and other articles. The investigations are still being carried on.

Another Archæological Discovery at Drummond. We lately mentioned the discovery of a stone cist, with two skeletons and an urn, on the grounds of Mr. G. G. Mackay, C.E., at Drummond. Since then, two similar cists, with skeletons and an urn, have been discovered. The skulls are said to be of pre-Celtic shape.

ELECTION OF CITY ARCHITECT.

THE election took place at Guildhall on the 26th ult. We gave the names of candidates in our last. At the commencement of the proceedings, the town clerk read letters from Mr. Barry and Mr. Horne, announcing that they had withdrawn from the contest. Three other gentlemen—Messrs. Isaacs, Tucker, and Peck—were subsequently declared ineligible under the standing orders of the Court, so that the number of candidates who finally went to the poll was six only, namely, Messrs. Bell, Chancellor, Dawson, Heath, Horace Jones, and Wallen. It was arranged that the number should first be reduced to four, and the result of the poll was that Messrs. Bell, Dawson, Jones, and Wallen had obtained the greatest number of votes. Another poll was then taken to reduce this number to two, when Messrs. Bell and Jones were at the head of the poll. Upon the final poll, Mr. Horace Jones was at the head, and that gentleman was consequently declared to be duly elected. The first numbers declared were: Jones, 133; Bell, 130; Dawson, 110; Wallen, 109. Upon the second poll, the numbers were: Jones, 86; Bell, 78; Dawson, 38; Wallen, 35. Upon the final poll, the numbers were: Jones, 95; Bell, 82.

RAILWAY CLAIMS AT GUILDHALL.

MR. BURCHELL, the solicitor to the Metropolitan Railway Company, attended before Mr. Alderman Besley, in pursuance of notices served upon some of the occupiers of the houses in the route of the company's line of rail, to treat and agree for the surrender of the property in their possession.

The following six claims were settled by mutual agreement after they were brought into court:—Luke Lillyman, Moor-lane, amount of claim, 390*l.*, amount awarded, 210*l.*; George Ewers, Moor-lane, claim 330*l.*, award 110*l.*; William Gill, Bowling-square, Whitecross-street, claim 150*l.*, award 55*l.*; James Dyall, Moor-lane, claim 1,133*l.*, award 450*l.*; James Worsley, Red-cross-street, claim 1,191*l.*, award 300*l.*; Mrs. Cherry, Moor-lane, claim 310*l.*, award 190*l.* In the three following cases, all of which were contested, the difference in the claims and awards was even more conspicuous. In the case of James Bibbey, of Hartshorn-court, the amount of claim was 728*l.*, and the award was 165*l.*; Joseph Stokes, Barbican, claim 1,036*l.*, award 327*l.*; and Mr. H. M. Blew, Whitecross-street, claim 657*l.* 10*s.*, award 135*l.* The total of the arranged claims amounted to 3,504*l.*, and the amount accepted to 1,315*l.*, leaving a balance against what was asked by the claimants of 2,189*l.* The total of the contested claims was 2421*l.*, and that of the magisterial awards 627*l.*, leaving a sum of 1,794*l.* disallowed by the alderman.

WATERWORKS COMPANIES.

Portsmouth.—At the half-yearly meeting of the Portsmouth Waterworks Company the report was taken as read. It stated that the whole of the share capital of the company was now subscribed, making the total sum raised 120,000*l.* No part of the 5,000*l.* authorised by the shareholders to be raised at a previous meeting has yet been borrowed, but the greater part of it will be required for the completion of the land and springs at Havant. The directors have caused new mains to be laid into East Southsea, the cost of which is estimated at about 600*l.* The directors recommended a dividend at the rate of 6 per cent. per annum upon the paid-up share capital of the company, free of income-tax. The revenue of the company amounts now to something above 10,000*l.* a year, with a gradual but constant increase. During the period to which the accounts relate, 793 additional house services have been laid on, which will yield a future revenue of about 455*l.* a year. The principal proportion of the houses laid on have been houses of 10*l.* annual value. During the half-year there has been supplied to the borough 289,800,000 gallons of water. The report was adopted by the meeting.

Derby.—At the half-yearly meeting of the Derby Waterworks Company the report which was read recommended a dividend at the same rate as last half-year, viz. 1*l.* 2*s.* 6*d.* per share, or 9 per cent. per annum, free of income-tax, after carrying 150*l.* to the credit of the contingent fund. They regret, however, to be obliged to report the first serious accident to the works since their establishment. On the 7th of October a large portion of the wall of the service reservoir fell in, rendering it necessary to take down and rebuild the whole of the straight side. The company's engineer, Mr. Hawksley, considers that the earthquake was the immediate cause of the falling of the wall, but there was, no doubt, some abnormal condition of the work previously. The whole has been restored, and in a manner much more substantial than the original work. The report was adopted.

BUILDING LEASES.

SIR,—To write to you or to the editor of some other paper whose speciality includes the terms and arrangements upon which estates are often covered with buildings, is a possible course for me, and is perhaps the most likely one to produce a change in some provisions now too commonly introduced in building leases. If, however, my effort to produce this change should prove effectual, I shall, indeed, resemble the fabled mouse, at whose birth the mountain laboured,—so vast, compact, and self-sustaining is the body in the service of whose tenants and in whose own service also I plead.

The covenants that I desire to see modified are the painting covenants now commonly introduced into building leases, beside which, a papering covenant is, I find, also creeping in. These are covenants which in practice every reasonable and honourable landlord does modify; and I desire to see the covenants themselves conform to this reasonable practice. The covenants referred to are, I believe, wholly modern innovations: they run in some such words as follow:—"And also shall once in every third year of the said term sufficiently paint, with two coats of good oil-colour, the outside wood, ironwork, and other parts of the said premises usually painted; and once in every seven years of the said term in like manner paint the interior of the said premises." They are sometimes more stringently worded; and a clause added, requiring the walls of the premises to be papered once in every seven years. They are often made still more unreasonable by every seventh year being substituted for once in every seven years,—a most burdensome covenant indeed, in case of serious illness in the house, and in other similar cases.

Now, any one at all acquainted with buildings must know that the papering covenant cannot be reasonably insisted on in any lease: a varnished paper, a good paper in a room little used, expensive decorations of any kind, will often outlast double or treble the prescribed term, while a common paper, badly used, may want renewing two or three times in the seven years. To enforce the covenant would be to put a premium on bad papers,—a foolish thing, indeed, for a landlord to do, as good papers and good tenants generally go together; and the purchaser of a lease with this covenant in it, I need not remark, *legally* forfeits the lease if it is not observed. Similar observations may be made on the painting covenant as regards work varnished, especially if also grained (should this covenant be ruled to include the latter work). It is indeed admitted that internal painting as well as papering is merely decorative: what interest of the landlord's, therefore, is served by burdening a tenant for eighty or ninety years with a constant recurrence of decorative work, however desirable it may be for a landlord to do so in a lease for seven, fourteen, or twenty-one years? There is, doubtless, a shadow of excuse for insisting on the external painting, such painting upholding the structure; but even that were surely sufficiently provided for by the word "paint" in the general repairing covenant, where, also, the word "paper" could be inserted if desired. If the object of the introduc-

tion of these covenants in long leases be that the premises be given up at the end of the term in proper decorative condition, to bring them into operation during the last seven years of the term alone would be sufficient.

I am quite aware that we hear, on all sides, both from the lawyers who write them, and the builders who sign their names to them, that "no one ever regards these covenants;" but do these observations reach the landlord's ear? If so he would surely understand the folly of introducing, in any legal instrument, covenants to be mutually unobserved; for as regards the tenant, the effect of holding this whip over his shoulders, is to drive from the purchase of leasehold property all who will not undertake engagements that they cannot reasonably and conscientiously carry out, and thus to perpetuate the ownership of leaseholds among a morally inferior class: as regards the landlord, on the other hand, while the covenants in general are wholly disregarded, they do at times put an instrument of oppression in his hands, who for any purposes of his own, pleases to take advantage of the letter instead of following the spirit of the lease.

In the service, therefore, both of landlord and tenant, I desire to see this modern innovation abandoned, the covenants referred to omitted from all future building leases, and replaced by the words "paint and paper," inserted in the general repairing covenant.

Could I persuade landlords to believe with myself that their interest in a just, legal position of their tenants was only second to that of the tenants themselves, we should, I have no doubt, soon see some new legislation on this subject, at least, carrying further the principle acknowledged in the recent Act granting relief for one breach of the insurance covenant; and thus tenants might hope no longer to find as their great security the "elastic conscience of a jury who can never be brought to eject a tenant where no substantial injury has been inflicted." I quote a lawyer's remark. H. F.

IMPROVEMENT BILLS.

SIR,—You have mentioned that the Arcade Bill was thrown out on its second reading in the Lords, through the strong opposition of the influential inhabitants of the district, notwithstanding the Metropolitan Board of Works approved of the scheme. Now, I cannot help thinking that, even though a Bill be a private speculation, it is desirable that projects for beautifying the metropolis, and at the same time supplying a want, should receive the consideration of Parliament, irrespective of local opposition. Are all future Bills for making new streets, or adorning old ones, to be rejected simply because they are projected by private speculation? for this seems to be the chief reason why the Arcade Bill was thrown out. I trust, when future Bills are presented for consideration, we shall find more liberality of feeling in the inhabitants of the vicinity of the proposed improvement.

JUSTITIA.

CHURCH-BUILDING NEWS.

Wigginhall (*Norfolk*).—The well-known old church of St. Mary Magdalene, Wiggenhall, has just received an addition of oak chancel stalls and a new pulpit. The whole has been carried out by Mr. B. Broadbent, of Leicester. Other restorations are very much needed, and it is hoped ere long funds will be forthcoming to renew the nave roof, which is at present in a dangerous condition. The pulpit has been made out of some old screen work, and mounted upon a stone base. Mr. E. Dolby, of Wantage, was the architect employed.

Newcastle-under-Lyne.—A new school church has been opened at Madeley. The building is situate at the junction of the Betley and Great Madeley roads. The style of architecture may be termed Composite: the exterior walls are red and blue brick, with dressed stone quoins for the corners, windows, doors, and gables; and the interior walls are plastered. The roof is open, with stained red deal spars. The stalls for the church portion, which is separated from the infant school by sliding-doors, are of the same material, stained. Connected with the edifice is a bell and clock turret, and at the west end there is an entrance porch, which serves for a vestry. The builder was Mr. Stringer, of Sandbach.

Worcester.—A letter by Lord Lyttelton, on the restoration of Worcester Cathedral, has been extensively circulated in the county at the request of the Dean and Chapter. What has been done, says his lordship, may be generally described as follows:—Externally, the whole of the fabric east of the tower has been restored, the east end and two eastern transepts having been in a great measure rebuilt. All the windows have been altered, and new buttresses and pinnacles erected. The two west transepts have been thoroughly repaired, and a large new window inserted in the north-west transept. Internally, the whitewash and plaster have been removed from the walls both of the choir and the nave, the whole of the vaulting repaired, two large piers rebuilt, two unsightly walls removed, the marble shafts and carved work restored, the marble shafts and carved work restored, the bosses re-gilt, and part of the ancient painting renewed. Some ancient rooms have been converted into vestries, and the chapter-room restored within and without. The whole expense of these extensive works, amounting to near 31,000*l.*, has been defrayed from capitular funds. What remains to be done, as proposed by the Dean and Chapter, may be divided as before into two heads, the external and the internal work. Externally, the north, west, and south sides of the nave, including the north porch, are to be restored, a new large west window inserted, and the cloisters thoroughly repaired. The cost of the external work is estimated at 8,240*l.* Internally, the floor of the nave is to be repaired at the charge of 1,000*l.*; the cathedral is to be lighted, and furnished with a warming apparatus: the whole of the choir remodelled; a new organ-screen and reredos to be erected; the organ to be re-constructed; the floor repaired, and the stalls and fittings materially improved. The expense of the internal work is estimated at 13,700*l.* The plans for the choir have been prepared by Mr. G. G. Scott, in conjunction with Mr. A. E. Perkins, the cathedral architect, and it is proposed that they should be carried into effect under their joint superintendence. The remainder of the work will be entrusted to Mr. Perkins. The chapter have exhausted all the resources at their command for the prosecution of these great works. The inhabitants of the diocese are urged to make an unusual effort to complete the restoration. The sum needed is—for the exterior, 8,240*l.*; for the interior, 13,740*l.*; total, 21,980*l.* A public meeting is to be held on this subject at Worcester on Thursday, April 7th.

Pershore.—The Abbey Church Committee have decided upon opening the lantern tower, and erecting a stage for the ringers. The cost (according to Mr. Scott's estimate) is 360*l.* A special subscription-list for this object has been opened. Mr. Scott is said to have discovered that the tower and lantern are either the work of the same architect, or by a close imitator of the architect, who built the steeple of Salisbury Cathedral.

Books Received.

Pledge's Pic Nic Sketches of Ashridge. By CHARLES MAY. Oxford and London: J. H. & J. Parker.

MR. CHARLES MAY has here put together photographs, made by himself, of the House, neighbourhood, and persons connected with it, and has added some letterpress descriptive of the building. The House, which is on the confines of Hertford and Buckingham, was commenced from the designs of James Wyatt, and finished by his nephew. The volume makes a good memoir.

The Elements of Mechanical Physics. By J. C. BUCKMASTER. Chapman & Hall.

MR. BUCKMASTER is a certified teacher of science by the Department of Science and Art, and examiner in Chemistry and Physics in the Royal College of Preceptors; and any work on Mechanical Physics of which he is the author is entitled to favourable consideration. This little volume is intended more particularly for the use of intelligent workmen; such as attend evening classes in connexion with mechanics' institutions and similar bodies; and it appears to be well adapted for such a purpose. Instruction in elementary science might be conveniently and appropriately carried on in such classes; and the present work is popular in treatment, and, at the same time, demonstrative, and differs but little from other works on this subject, except in a large number of examples, most of which may be worked out by any person who understands proportion.

The Principles of Agriculture. By WILLIAM BLAND, M.R.A.S. Longman & Co.

MR. BLAND, though he farms his own paternal acres and is not merely an inexperienced amateur in agriculture, is the author of a work on the principles of construction in arches, piers, buttresses, &c., and is hence architectural as well as agricultural in his proclivities. The present work is a second edition of one published so long ago as 1827, and which has hence for many years been out of print. In the present edition he has of course taken into consideration the immense advance which has been made in agriculture by the aid of science; and has brought to bear upon it his own greater practical experience, combined with that of others, and especially of his father. The work is dedicated to the Sittingbourne and Milton Club, of which he is the honorary secretary and Sir J. M. Tylden the president.

VARIORUM.

"Report upon Metropolitan Railway and other Schemes of Session 1864. By J. W. Bazalgette, Engineer to the Metropolitan Board of Works." Although we have already more than once incidentally made use of this elaborate report in reference to the metropolitan railway schemes, still it merits a more formal and special notice. It consists of a thick pamphlet of 250 pages, and gives a particular account of the routes of all the projected metropolitan railways; how each affects every street or thoroughfare which it crosses or traverses, whether by viaduct or bridge; how the sewers are interfered with by the subway projects; and so on. In a summary of the public property interfered with, Mr. Bazalgette says,—

"The schemes proposed for the metropolis this session are more numerous, bolder, and more complicated than on any previous occasion. They involve the construction of 25½ new lines of railway and branches, of 47½ miles in length; with eleven bridges over the Thames, and two lines passing through the Thames Tunnel; and the total capital proposed to be raised is about seventy millions. Hyde Park, the Green Park, St. James's Park, Kensington Gardens, Newington Park, Hackney Downs, Leyton Grange Park, Trinity-square, Finsbury-circus, Camden-square, Oakley-square, Ampthill-square, Euston-square, and Sloane-square, would all be cut through, and some of them in two or three places, and the same would be the fate of the following commons:—Stoke Newington, Clapham, Tooting (invaded by seven different lines), Acton Back, Acton, Wimbledon, Fulham, and Deptford; and Turnham Green.

Bishopsgate-street would be crossed by railways 9 times; Whitechapel-road, 13 times; King William-street, City, 4 times; Strand, 4 times; Whitehall, twice; Palace-yard, Westminster, four times; Belgrave-road, 4 times; Uxbridge-road, Notting Hill, 5 times; Kensington-road, 3 times; Edgware-road, Kilburn, 4 times; Euston-road and Marylebone-road, 13 times; Deptford Lower-road, 3 times; Acre-lane, Brixton, 5 times; and St. Stephen's Churchyard and St. Pancras Burial Ground would also be invaded, the latter by three different lines of railway.

It is proposed to construct the following railways along the line of the Thames Embankment, and underneath a portion of the new street to the Mansion House:—London Union; Metropolitan District, Inner Circle; Metropolitan Grand Union; London Main Trunk Underground; Victoria Station and Thames Embankment; Hampstead Midland North Western and Charing Cross."

——"An Historical and Archæological Sketch of the Ancient Town, Harwich. By a Visitor at Dovercourt. Harwich: Smith." We have here a lively and amusing archæological gossip, by the Rev Richard Cutler, about Harwich, *et multis aliis*,—indeed more of the latter than the former; and something as to the "great, great, great, great grandfather" of the author's printer and publisher, Mr. Smith, to boot,—or at least to shoe; for his shield was "three [not four] horseshoes, and his crest a brawny arm wielding a sledge-hammer" in the Crusades.——"A Dictionary of Chemistry. By Henry Watts, F.C.S. Part XI. Longman & Co." This is a work founded on the late Dr. Ure's, but mostly rewritten with very competent aid, and which we have more than once favourably noticed. The present part runs from Fluorine to Gallotannic Acid, and comprises a good deal of matter as to the Formates, and as to Fuel and Fulminates. The editor has resolved,—wisely, we think,—to restrict the monthly issue to one-half of what it originally was. The work and its readers will no doubt reap additional advantages by this arrangement.——"The Foreign Enlistment Acts of England and America. By Vigilans. London: Saunders, Otley, & Co." The object of this pamphlet is to discuss the *Alexandra* and the "Rams" questions, which the author does, with ability, favourably to the freedom of our shipbuilders and the interests of the Confederates. ——"The Art Student" (Hall & Co., Paternoster-row), may be made a very useful publication, and should be helped. No. 2, just now published, is well worth the 6d. it costs.——The following issues we need only mention:—"Laxton's Price Book" for 1864; "Lockwood's Price Book" for 1864; "The Engineer's, Architect's, and Contractor's Pocket Book," for 1864 (Lockwood), containing a large amount of useful information; and "Tables for the use of Timber Merchants and Builders" (Manchester, Abel Heywood). The last includes the number of

Petersburg standards in any number of ning feet, of all sizes; and tables of equiva- t prices.——"The Present Aspect of the nvict Question. By Sir Walter Crofton, C.B. ndon: Emily Faithfull, publisher." The hor of this pamphlet strongly advises super- ion as a safeguard if the ticket-of-leave tem is to be continued; otherwise he hopes s system will be altogether abolished, and the n recommended by him, and tried with suc- s in Ireland, adopted. In that case the nulus of allowing convicts to work themselves m very strict early stages of discipline and vation into more modified stages of detention, intermediate prisons, at the same period en they would otherwise have been liberated ickets-of-leave, proved sufficient. Such a sys- n would certainly be better than the present; why the objection of settled colonies to a tinuance of the transportation system should e necessitated its entire abolition we cannot ; and assuredly transportation was better h for the criminal and for his country than other that has yet been either tried or gested. Some of the richest, and in every inary sense best-doing men in Australia, e convicts. Can as much be said for ticket- eave men in this country? The arrestment the emigrative process produced the present atisfactory state of the convict system: why remove all the difficulty by a renewal of that cess under new auspices?

Miscellanea.

HE HEREFORDSHIRE MEMORIAL OF THE LATE GEORGE CORNEWALL LEWIS, BART. — The lel of the statue intended to be placed in t of Hereford Shirehall, according to the l *Times*, has now been completed by Baron ochetti. The casting of the statue in bronze be proceeded with at once.

RT-UNION OF LONDON SCULPTURE. — The ues and groups sent by sculptors, in reply to offered premium of 600*l.*, have been received, are now being displayed in the north court ne South Kensington Museum, by permission ne committee of Privy Council. The collec- will be open to the public after Wednesday .

UST OF THE PRINCE OF WALES.—Mr. Morton vards has completed a bust of the Prince of es, which is to be executed in marble, for the of Toronto. His Royal Highness is repre- ed in the uniform of the 10th Hussars, and likeness seems to us good. The bust will ably be reproduced in Parian, of a smaller by the Art-Union of London, for distribu- as prizes, and to match with their bust of Princess, which is certainly the best yet e.

HE SITE OF NEW ST. THOMAS'S HOSPITAL.— he Governors of the Hospital making appli- on to Vice-Chancellor Wood for his sanction ne contract with the Metropolitan Board of ks for the purchase of the site at Stangate, ween Westminster Bridge and Lambeth Palace, corporation of the city of London intervened, ning certain rights over the property of the ital, and alleging that the site was an im- er one, and ought not to be sanctioned. The -Chancellor, however, decided against the oration's intervention, as he could not agree them that the site was unwholesome, or in respect an improper one.

ICESTER. — At a recent meeting of the ester Literary and Philosophical Society, a r was read by Dr. Barclay, on "Modern ester," to a numerous audience. Seven s since he had read a similar paper, and he stated that, while on the last occasion he little else to do than to grumble and com- , he had now a large portion of praise and obation to mete out; and the character of new buildings, whether ecclesiastical, public, antile, or private, had so much improved, with a few notable exceptions, he found ing to censure or to lament. The increase opulation, at the rate of 10,000 in each de- ial period; the increase of machinery, and gradual superseding of the framework knit- ; the striking out of new branches of trade commerce, are raising Leicester at a more d rate than almost any other manufacturing ; and the happy results are seen in the for- s made, the families founded, and the almost ersal prosperity.

ROCHESTER CITY CROSS.—During the demolition of old buildings on the north side of Rochester Cathedral, fronting High-street, the workmen came upon a portion of the old Corn-cross which formerly stood in High-street, until built over several centuries since. The portion of the cross discovered is of solid masonry, and stands about 12ft. in height.

DINING HALLS: BIRMINGHAM.—The report of the directors, presented at the first general meeting of the shareholders on the 29th of February, states that the first experiment of a public dining-hall in Birmingham has proved decidedly successful. A gross profit of 83*l.* 16s. 6d. has been made on seven months' trading in the Slaney-street establishment; and there was no doubt that the establishment would pay a dividend of 5*l.* per cent. on its capital. The directors have taken a lease, for ninety-nine years, of conveniently situate premises in Cambridge-street, where a hall of spacious dimensions is now rapidly approaching completion.

COTTAGE BUILDING.—A correspondent of the *Band of Hope Review*, a well illustrated and instructive paper, which, at the price of one halfpenny, is circulated in very large quantities amongst the young, says,—"The village of Witton, near Redcar, in Yorkshire, forms part of the estate of Sir John Lowther. He has put a stop to the public-house of the village; and, having rebuilt every house, has allowed that formerly devoted to the sale of beer and spirits to be opened by the tenants for the use of travellers, who may desire less exciting refreshments. The old sign has been sawn up, and part of it now conveys water from a spout to the tub in the back yard. The good woman who showed it to me, said,—'Ay, and the old times are gone, and so we just use the sign to draw the water to the barrel, as it cannot draw the folk to the beer.'" The editor remarks that several landed proprietors have followed the example of Sir J. Lowther, with the most pleasing results, and hopes that others will do so too.

THE DWELLINGS OF THE POOR IN LAMBETH AND SOUTHWARK.—On Tuesday in last week, a public meeting was held at the Lambeth Baths, to adopt measures to improve and cheapen the dwellings of the poor, and supply the great deficiency now existing in consequence of the pulling down of so much of this class of property by the railways. It was unanimously resolved, "That the overcrowded state of the dwellings of great numbers of the artisans and mechanics in the boroughs of Lambeth and Southwark, the want of proper drainage and ventilation to those dwellings, combined with the high rents exacted for them, are matters deserving of serious consideration; and further, this meeting is of opinion that measures should at once be adopted for the purpose of providing more fit and convenient dwelling-places for such artisans." It was also resolved to form an association to acquire land near the centre of manufactures, and generally to carry out the suggestions of the first resolution. The chairman, Mr. T. Webber, promised that in the event of the scheme being carried out he would give 100 guineas towards the object.

THE LONDON ASSOCIATION OF FOREMAN ENGINEERS.—The annual dinner of this association has taken place at Radley's Hotel, Blackfriars. Mr. H. Grissell was in the chair, and there were present about 150 members of the association and visitors. Among the latter were—Mr. Alfred Field (of Maudslay & Field), Mr. Hodges, the Hon. Mr. Duncan, Mr. Reed (chief constructor of the navy), Captain Blakeley, Captain M'Gregor, &c. The chairman alluded to the jealousy with which this association had been viewed by employers, and declared that so far as he was concerned that feeling was now dissipated. Mr. Newton, of the Royal Mint, president of the society and one of its founders, gave an exposition of the objects of the society, which were not to discuss "shop politics," but to afford to the members the opportunity of interchanging ideas upon engineering subjects; to enable them to be of mutual assistance to each other in procuring situations; to establish a scientific library for their use; and to provide annuities for decayed members. The secretary's report showed the funds in hand to amount to 347*l.* 17s. 9d., which is invested in Three per Cent. Consols. The number of members is seventy-five ordinary and twenty-six honorary. The chairman and Mr. A. Field announced their readiness to become honorary members, and to give the society each 50*l.* towards the formation of a benefit fund if eight other engineering firms would each give 50*l.*

A CHAPEL-BUILDING DISSENTER.—Mr. Samuel Morley proposes to give one-third of the cost of twelve dissenting places of worship, each to accommodate 500 persons; and to be at the expense of erecting six iron rooms in destitute localities, so as to prepare the way for permanent buildings. Good Mr. Morley.

LIVERPOOL LABOURERS' DWELLING-HOUSE COMPANY.—At the annual meeting of the shareholders of this company, the report congratulated them on the proceedings of the year, as the whole of the dwellings, with but one or two exceptions, had been let, and the result was that the receipts were 50*l.* in excess of any previous year. The report was adopted, and a motion passed fixing a dividend of 3½ per cent.

FALL OF A FLOOR.—At a temperance meeting held in the Wesleyan school-room, Altarnun, near Launceston, when the room was filled by about 500 persons, at the close of the lecture, which lasted nearly three hours, the flooring suddenly gave way, and fully 100 persons fell through into some stables below, a depth of about 10 feet. Singular to relate, not one of the persons who fell had any bone fractured; and though many were bruised, and all frightened, there was no serious injury to any one. The beams supporting the floor had rotted away where inserted into the walls.

THE SCHOOLS OF ART QUESTION. — A deputation from the Schools of Art in Great Britain and Ireland had an interview recently with Earl Granville and Mr. Lowe at the Privy Council Office. The deputation was introduced by Col. Wilson Patten, M.P., accompanied by Mr. Pease, M.P.; Gilbert Greenall, M.P.; Mr. Gregson, M.P.; Mr. Francis Powell, M.P.; Mr. Allen H. Bathurst, M.P.; &c. Mr. Beresford Hope stated the wishes of the deputation, in reference to the recent minutes of the Privy Council. Earl Granville gave his consent to the moving for a committee of the House of Commons to inquire into the whole question.

SCULPTURE AND THE ROYAL HORTICULTURAL SOCIETY.—The exhibition of sculpture of last year in the gardens at South Kensington showed how many beautiful effects could be produced by the combination of sculpture and foliage. The council continue the sculpture exhibition with increased confidence, and announce the arrangements for the years 1864 and 1865. In each year the council will make purchases to the value of 500*l.*, provided that new and original works of sufficient merit are exhibited under the conditions hereafter stated. As a general rule it is desirable that all works should be finished works in plaster. But works may be sent in in marble, bronze, terra-cotta, and other materials than plaster. The works sent for purchase must be figures, groups of figures, large ornamental vases with bas-reliefs, ornamental pedestals with bas-reliefs, but not simply bas-reliefs unapplied. Artists of all nations are invited to send works. All works for the competition of 1864 must be sent on or before the 1st of June, 1864, and must be left in the gardens until the 30th of September.

TEMPERANCE LAND AND BUILDING SOCIETY.—The report read at the tenth annual meeting of this society, Mr. H. J. Phillips, secretary, stated that the total receipts during the year were nearly 23,000*l.* in excess of the preceding year, having amounted to upwards of 124,000*l.* The shares issued numbered 5,719, being 2,143 in excess of the year previous, and making the total issued during ten years 26,321. The subscriptions received on shares amounted to 79,000*l.*, a sum largely in excess of any former years. The sums received in the deposit department amounted to 17,000*l.* The amount received for interest and premiums on the investment of the society exceeded 11,700*l.* The subscriptions and deposits returned to members and depositors on withdrawal of the whole or a part of their investments amounted to 32,000*l.* After payment of all sums the shareholders and depositors were desirous of withdrawing, there remained at the credit of investing shares 115,000*l.*, and at the credit of depositors 61,000*l.*, together 176,000. The sums advanced upon house property during the year amounted to 69,898*l.*, being upwards of 23,000*l.* in excess of any previous year; thus increasing the total sum advanced on house property to 283,000*l.* The total assets of the society have by the year's transactions been increased by 42,000*l.*, and now stand at 211,915*l.* The profits of the year have enabled the directors to carry an amount to the reserved or contingent fund account whereby it is increased to 21,663*l.*

GRAPHIC SOCIETY.—At the next conversazione, to be held on Wednesday, the 9th instant, an interesting contribution of the works of a late member, Mr. William Duffield, is expected. The meetings of the present session have been more than ordinarily attractive.

CHUBB'S TRADE LIST.—Messrs. Chubb & Son have published an illustrated list of locks and safes, which has the distinctive merit of putting together, on large sheets, views and prices of their variously-constructed safes, so as to admit of easy comparison. The list also gives engravings of their fire-proof doors and frames for strong-rooms.

WEST HAM BOARD OF HEALTH ASSISTANT SURVEYORSHIP.—The applications for the office of assistant surveyor were between seventy and eighty. The chairman, in intimating this at a recent meeting, said he wished to know what the board intended to do. A long and stormy discussion ensued; after which it was proposed that the question be adjourned for three months, which was carried by 12 to 2.

THE WILTS COUNTY SURVEYORSHIP.—A committee having reported its dissatisfaction with the manner in which the county surveyor, Mr. Penniston, performed his duties, on which a long discussion took place at the last sessions, the surveyor, while denying the allegations of the committee, and complaining, in a memorial explaining and defending his own conduct, that he should be expected, without adequate remuneration, to be always attending committee meetings, and otherwise occupying so much of his time, resigned his appointment, on the explicit understanding that there was no imputation on his character, and that he was not supposed to admit the allegations against him. The court accepted Mr. Penniston's resignation, reserving the question of remuneration, as to which he had memorialized them.

THE METROPOLITAN DEATH-RATE.—The deaths from typhus and other fevers still continue very high, and in other ways the Registrar General's report is unfavourable, and shows the necessity for more than usual sanitary care. During the past week the deaths were 1,586. The average of ten years, allowing for increase of population, is 1,409, being 177 deaths more than the average. The deaths from zymotic causes, figure to the large extent of 323. Fatal cases of small-pox rose from 8 in the previous week to 20 last week; measles declined from 32 to 18; scarlatina carried off 55 persons; diphtheria, 11; whooping-cough, 56; and typhus, 63.

SOUTH LONDON WORKING-CLASS INDUSTRIAL EXHIBITION.—The National Baths in the Westminster-road, Lambeth, have been opened as an Exhibition of the handicraft of the working men of Lambeth. There are 231 exhibitors, comprising men of various trades, such as masons, painters, carpenters, engineers, labourers, gardeners, and even chimney-sweeps. The articles exhibited are upwards of 500 in number, and are chiefly, of course, the production of over-hours. Among them are models of buildings and monuments, paintings, statuary designs in plaster, carvings, &c., many of them done by workmen not at all connected with such subjects in their daily labours. At the opening, Sir Morton Peto, M.P., Mr. John Bright, M.P., Mr. Warner, M.P., and the chairman, the Earl of Shaftesbury, addressed the meeting. The exhibition will remain open till Saturday, the 12th inst., inclusive, and the charge for admission is fixed at twopence. There seems to have been great want of good management as regards publicity.

VALUE OF PROPERTIES.—Last week, Messrs. Chinnock, Galsworthy, & Chinnock sold, at the Mart, the following properties:—Wandsworth-road: 2a. 1r. 24p. of freehold building land, with a frontage of 244 feet, sold for 1,660*l.*; 1a. 2r. 26p., adjoining, sold for 1,300*l.* Hampstead-road: Leasehold house, 6, Stanhope-place, let at 63*l.*, held for 76 years at 16s. ground-rent, sold for 800*l.* Leasehold house, 19, Rutland-street, and offices at side, let at 71*l.* 10s., held for 77 years, at 2*l.* 10s., sold for 900*l.* Leasehold house, 20, Rutland-street, let at 50*l.*, held for 73 years, at 2*l.* 10s., sold for 650*l.* Ditto, 21, Rutland-street, let at 48*l.*, sold for 580*l.* Freehold house, 73, Albert-street, Mornington-crescent, let at 52*l.* 10s., sold for 1,010*l.* Ditto, 74, Albert-street, a similar house, sold for 1,010*l.* Freehold house, 7, Mornington-street, let at 30*l.*, sold for 470*l.* Notting Hill: Leasehold house, 1, South-bank, let at 70*l.*, held for 50 years at 14*l.* ground-rent, sold for 760*l.*
